Optical Fiber Sensor Technology L.S. Grattan,B.T. Meggitt,2013-03-09 Systems and Applications in Optical Fiber Sensor Technology The essential technology which underpins developments in optical fiber sensors continues to expand, and continues to be driven to a very large extent by advances in optoelectronics which have been produced for the ever-expanding optical communications systems and networks of the world. The steps forward in the technology, often accompanied by a reduction in the price of associated components, have been, and continue to be, adapted for use in a wide variety of optical fiber sensor systems. These include, for example, the use of photoinduced gratings as fiber sensor components, coupled with the wider availability of shorter wavelength lasers, bright luminescent sources and high-sensitivity detectors which have opened up new possibilities for both novel fiber optic sensor applications and new sensing systems. This is to be welcomed at a time when, coupled with integrated optic miniaturized devices and detectors, real possibilities of systems integration, at lower cost and increased utility, can be offered. The fiber laser, and the expansions of the types and availability of the doped fiber on which it is based, offer further examples of the integration of the essential components of advanced optical sensor systems, fitted for a new range of applications.

The Ashburnham Pentateuch and Its Contexts Jennifer Awes Freeman,2022 A fresh interpretation of an enigmatic illumination and its contexts.The Ashburnham Pentateuch is an early medieval manuscript of uncertain provenance, which has puzzled and intrigued scholars since the nineteenth century. Its first image, which depicts the Genesis creation narrative, is itself a site of mystery; originally, it presented the Trinity as three men in various vignettes, but in the early ninth century, by which time the manuscript had come to the monastery at Tours, most of the figures were obscured by paint, leaving behind a single creator. In this sense, the manuscript serves as a kind of hinge between the late antique and early medieval periods. Why was the Ashburnham Pentateuch's anthropomorphic image of the Trinity acceptable in the sixth century, but not in the ninth?This study examines the theological, political, and iconographic contexts of the production and later modification of the Ashburnham Pentateuch's creation image. The discussion focuses on materiality, the oft-contested relationship between image and word, and iconoclastic acts as embodied responses. Ultimately, this book argues that the Carolingian-era reception and modification of the creation image is consistent with contemporaneous iconography, a concern for maintaining the absolute unity of the Trinity, as well as Carolingian image theory following the Byzantine iconoclastic controversy. Tracing the changes in Trinitarian theology and theories of the image offers us a better understanding of the mutual influences between art, theology, and politics during Late Antiquity and the early Middle Ages. nship between image and word, and iconoclastic acts as embodied responses.
