Educational Research L. R. Gay, Geoffrey E. Mills, Peter W. Airasian, 2011 Students often fear the educational research course. Don't worry. This book is famous for its lack of jargon, for its clear and concrete explanations, and its light (often funny) tone. As you read the book, you will build skills that you need to read educational research and produce your own. The book will help guide you through each step in creating your own research report. You can compare your work with the example published research articles in every methods chapter. In addition, the new Digital Research Tools for the 21st Century feature introduces novel tools and methods you can use to make the process of doing research easier or more efficient like using speech recognition programs to save time transcribing interviews (Chapter 15), using flip cameras and Skype to collect qualitative data (Chapter 14), and using management programs to organize citations (Chapter 21).

The Complete Poems of Shakespeare Cathy Shrank, Raphael Lyne, 2017-11-02 Although best known for his plays, William Shakespeare (1564 – 1616) was also a poet who achieved extraordinary depth and variety in only a few key works. This edition of his poetry provides detailed notes, commentary and appendices resulting in an academically thorough and equally accessible edition to Shakespeare's poetry. The editors present his non-dramatic poems in the chronological order of their print publication: the narrative poems *Venus and Adonis* and *The Rape of Lucrece*; the metaphysical 'Let the Bird of Loudest Lay' (often known as *The Phoenix and the Turtle*); all 154 Sonnets and *A Lover's Complaint*. In headnotes and extensive annotations to the texts, Cathy Shrank and Raphael Lyne elucidate historical contexts, publication histories, and above all the literary and linguistic features of poems whose subtleties always reward careful attention. Substantial appendices trace the sources for Shakespeare's narrative poems and the controversial text *The Passionate Pilgrim*, as well as providing information about poems posthumously attributed to him, and the English sonnet sequence. Shrank and Lyne guide readers of all levels with a glossary of rhetorical terms, an index of the poems (titles and first lines), and an account of Shakespeare's rhymes informed by scholarship on Elizabethan pronunciation. With all these scholarly resources supporting a newly edited, modern-spelling text, this edition combines accessibility with layers of rich information to inform the most sophisticated reading.

The Craft of Research, 2nd edition Wayne C. Booth, Gregory G. Colomb, Joseph M. Williams, 2008-04-15 Since 1995, more than 150,000 students and researchers have turned to *The Craft of Research* for clear and helpful guidance on how to conduct research and report it effectively. Now, master teachers Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams present a completely revised and updated version of their classic handbook. Like its predecessor, this new edition reflects the way researchers actually work: in a complex circuit of thinking, writing, revising, and rethinking. It shows how each part of this process influences the others and how a successful research report is an orchestrated conversation between a researcher and a reader. Along with many other topics, *The Craft of Research* explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of thoughtful yet critical readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, So what? Celebrated by reviewers for its logic and clarity, this popular book retains its five-part structure. Part 1 provides an orientation to the research process and begins the discussion of what motivates researchers and their readers. Part 2 focuses on finding a topic, planning the project, and locating appropriate sources. This section is brought up to date with new information on the role of the Internet in research, including how to find and evaluate sources, avoid their misuse, and test their reliability. Part 3 explains the art of making an argument and supporting it. The authors have extensively revised this section to present the structure of an argument in clearer and more accessible terms than in the first edition. New distinctions are made among reasons, evidence, and reports of evidence. The concepts of qualifications and rebuttals are recast as acknowledgment and response. Part 4 covers drafting and revising, and offers new information on the visual representation of data. Part 5 concludes the book with an updated discussion of the ethics of research, as well as an expanded bibliography that includes many electronic sources. The new edition retains the accessibility, insights, and directness that have made *The Craft of Research* an indispensable guide for anyone doing research, from students in high school through advanced graduate study to businesspeople and government employees. The authors demonstrate convincingly that researching and reporting skills can be learned and used by all who undertake research projects. New to this edition: Extensive coverage of how to do research on the internet, including how to evaluate and test the reliability of sources New information on the visual representation of data Expanded bibliography with many electronic sources

Transitions Theory Afaf I. Meleis, PhD, DrPS (hon), FAAN,2010-02-17 It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature. Score: 95, 4 Stars. --Doody's Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory. Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original transitions theory that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Capacity Building for IT in Education in Developing Countries Gail Marshall,Mikko Ruohonen,2013-03-14 Deryn Watson CapBIT 97, Capacity Building for Information Technologies in Education in Developing Countries, from which this publication derives, was an invited IFIP working conference sponsored by Working Groups in secondary (WG 3. 1), elementary (WG 3. 5), and vocational and professional (WG 3. 4) education under the auspices of IFIP Technical Committee for Education (TC3). The conference was held in Harare, Zimbabwe 25th - 29th August 1997. CapBIT '97 was the first time that the IFIP Technical Committee for Education had held a conference in a developing country. When the Computer Society of Zimbabwe offered to host the event, we determined that the location and conference topic reflect the importance of issues facing countries at all stages of developmen- especially Information Technologies (IT) development. Information Technologies have become, within a short time, one of the basic building blocks of modern industrial society. Understanding IT, and mastering basic skills and concepts of IT, are now regarded as part of the core education of all people around the world, alongside reading and writing. IT now permeates the business environment and underpins the success of modern corporations as well as providing government with cost-effective civil service systems. At the same time, the tools and technologies of IT are of value in the process of learning, and in the organisation and management of learning institutions.

Networks, Crowds, and Markets David Easley,Jon Kleinberg,2010-07-19 Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.
