Handbook of Image Engineering Yu-Jin Zhang,2021-01-04 Image techniques have been developed and implemented for various purposes, and image engineering (IE) is a rapidly evolving, integrated discipline comprising the study of all the different branches of image techniques, and encompassing mathematics, physics, biology, physiology, psychology, electrical engineering, computer science and automation. Advances in the field are also closely related to the development of telecommunications, biomedical engineering, remote sensing, surveying and mapping, as well as document processing and industrial applications. IE involves three related and partially overlapping groups of image techniques: image processing (IP) (in its narrow sense), image analysis (IA) and image understanding (IU), and the integration of these three groups makes the discipline of image engineering an important part of the modern information era. This is the first handbook on image engineering, and provides a well-structured, comprehensive overview of this new discipline. It also offers detailed information on the various image techniques. It is a valuable reference resource for R&D professional and undergraduate students involved in image-related activities.

AppleScript for the Internet Ethan Wilde,1998 Applescript is estimated by the Georgia Institute of Technologies Annual World Wide Web survey, among others, as the second most common language for Internet CGI development after PERL. Indeed, after a period of being almost forgotten, a host of new developments in the Applescript world have brought AppleScript into the limelight once again. Products and free 'add-ons' like Marionette, from Allegiant technologies, allow AppleScripters to 'script the Internet', -- write simple applications that reach out into the network and search web sites, download files, even write their own web browsers. In addition, products like FaceSpan allow AppleScripters to add sophisticated application interfaces to their scripts, making it harder to differentiate between an AppleScript and a 'regular' application. These developments, combined with an estimated 5 million AppleScripts worldwide has prompted Apple Computer Inc. to start development again, and the first PowerPC native version of AppleScript, with a host of new features and a dramatic speed increase, has been announced for the middle of 1998.
