African American Acculturation Hope Landrine, Elizabeth A. Klonoff, 1996-03-28 Should African American be construed as a race or as an ethnic group? If African Americans are defined as an ethnic group, what role does culture play in their lives and how can we measure their culture? This groundbreaking volume argues that we reject the concept of race and define African Americans as a cultural group. It presents the first scale ever devised for measuring acculturation among African Americans, along with powerful studies that empirically explore the role of culture and acculturation in African American behavior, health, and psychology. Among the authors' findings are how acculturation predicts symptoms--such as depression and anxiety--and physical problems such as hypertension. Public and mental health researchers and professionals will find this book an intriguing and useful presentation of an emerging approach to psychological and health theory and practice. I found this volume to be compelling and informative. I believe that this book will stimulate a great advance in the way we conceptualize African American psychology in particular and psychology in general. The authors do an outstanding job of integrating perspectives from multiple disciplines into a psychological perspective and then in applying that perspective to their empirical work. . . . This is a wonderful book and is of great service to the field. --Hardin L. K. Coleman, Ph.D., Department of Counseling Psychology, University of Wisconsin

In a carefully organized, easy-to-use format, author Gary Faigin shows readers the expressions created by individual facial muscles, then draws them together in a section devoted to the six basic human emotions: sadness, anger, joy, fear, disgust, and surprise. Each emotion is shown in steadily increasing intensity, and Faigin's detailed renderings are supplemented by clear explanatory text, additional sketches, and finished work. An appendix includes yawning, wincing, and other physical reactions. Want to create portraits that capture the real person? Want to draw convincing illustrations? Sexual Attraction and Childhood Association Arthur P. Wolf, 1995 In 1891, the anthropologist Edward Westermarck proposed that early childhood association inhibits sexual attraction and that this aversion was manifested in custom and law as the basis of the universal incest taboo. Then, in 1910, in the essays later published as *Totem and Taboo*, Sigmund Freud challenged the Westermarck hypothesis on the ground that the earliest sexual excitations of youthful human beings are invariably of an incestuous character. The incest taboo only existed, Freud argued, because of this natural propensity. Freud's challenge carried the day and became the standard view throughout the social and biological sciences. Consequently, the question was: why do all societies repress this natural inclination? Biologists argued that the incest taboo protected us from dangers of inbreeding; sociologists argued that it was necessary to prevent sexual rivalry that would destroy the family; and anthropologists saw the real purpose of the taboo as forcing families to exchange women in marriage. The book uses a wide range of research - from studies of nonhuman primates to reports of incestuous child abuse - from African divorce practices to animal behavior - to demonstrate that Westermarck was right and Freud wrong. It shows that there is a critical period in human development - approximately the first thirty months of life - during which association permanently inhibits sexual attraction. It concludes that the incest taboo is unnecessary and cannot be explained in functional terms, and that encouraging early association between father and daughter is probably the best way of preventing sexual abuse.

Novel Aspects on Epilepsy Humberto Foyaca-Sibat, 2011-10-12 This book covers novel aspects of epilepsy without ignoring its foundation and therefore, apart from the classic issues that cannot be missing in any book about epilepsy, we introduced novel aspects related with epilepsy and neurocysticercosis as a leading cause of epilepsy in developing countries. We are looking forward with confidence and pride in the vital role that this book has to play for a new vision and mission. Therefore, we introduce novel aspects of epilepsy related to its impact on reproductive functions, oral health and epilepsy secondary to tuberous sclerosis, mitochondrial disorders and lysosomal storage disorders.

Incest: A Biosocial View Joseph Shepher, 1983-05-28 *Incest: A Biosocial View* focuses on the sociobiological theory of incest and compares it with other theoretical approaches to the problem. The argument made in this book is that the existence of culture does not lead to the exemption of *Homo sapiens* from the evolutionary process. Instead, it creates a coevolutionary process, of which the evolution of incest avoidance in human beings is the simplest, yet most instructive, example. Comprised of 11 chapters, this volume begins with an introduction to the problem of incest, followed by a discussion on the sociobiological theory in general and some important methodological issues. Epigenetic rules and the importance of reproduction are considered, along with inclusive fitness and kin selection; kinship altruism (nepotism); reciprocal altruism; mate selection and parental investment, parent-child and sibling conflict; aggression and social order; and the biosocial view of culture. The next three chapters survey the theories and empirical findings that led to the

sociobiological theory of incest, with particular reference to the views of Edward Westermarck as well as the kibbutz and the sim-pua. The propositions of the sociobiological theory of incest are then outlined. The book concludes by summarizing the classic theories of incest and synthesizing them in light of the sociobiological theory. This monograph is relevant to psychoanalysts, sociologists, biologists, anthropologists, and psychologists studying the problem of incest.

Inbreeding, Incest, and the Incest Taboo Arthur P. Wolf,2005 Why is incest widely prohibited? Why does the scope of the prohibition vary from society to society? Why does incest occur despite the prohibition? What are the consequences? To reexamine these questions, this book brings together contributions from the fields of genetics, behavioral biology, primatology, biological and social anthropology, philosophy, and psychiatry.

Introductory Psychology in Modules Brett W. Pelham,David Boninger,2020 Introductory Psychology in Modules: Understanding Our Heads, Hearts, and Hands is a unique and comprehensive textbook that offers an accessible, engaging introduction to the key topics of psychology through thirty-six modules that facilitate more focused, interactive learning. Each of the thirty-six modules features an essay on a specific psychology topic--including memory and cognition, human development, clinical psychology, and applied psychology--that stimulate focused critical thinking. Augmenting the essays are supplementary hands-on activities and group discussion proposals, and the modules conclude with multiple-choice practice quizzes for students. These, along with the heavy use of anecdotes, will engage students in active, participatory learning and encourage them to understand and interact with the content of the essays. The modular format allows for instructors to personalize the order of topics covered, as well as skip certain topics and custom-build their own courses on introductory psychology. By covering the classic theories, research, and contemporary findings that every student in psychology should study in digestible, focused modules, Introductory Psychology in Modules is an essential core textbook for all students taking introductory psychology courses. Additionally, the specified modular format allows for this text to be used for supplementary reading where critical thinking is required to aid students in related areas, including nursing, medicine, social work, policing, and sociology.
