Airline Passenger Security Screening National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Commission on Engineering and Technical Systems,Panel on Passenger Screening,Committee on Commercial Aviation Security,1996-07-19 This book addresses new technologies being considered by the Federal Aviation Administration (FAA) for screening airport passengers for concealed weapons and explosives. The FAA is supporting the development of promising new technologies that can reveal the presence not only of metal-based weapons as with current screening technologies, but also detect plastic explosives and other non-metallic threat materials and objects, and is concerned that these new technologies may not be appropriate for use in airports for other than technical reasons. This book presents discussion of the health, legal, and public acceptance issues that are likely to be raised regarding implementation of improvements in the current electromagnetic screening technologies, implementation of screening systems that detect traces of explosive materials on passengers, and implementation of systems that generate images of passengers beneath their clothes for analysis by human screeners.

Early Medical Abortion, Equality of Access, and the Telemedical Imperative

Jordan A. Parsons,Elizabeth Chloe Romanis,2021-10-21 Telemedicine has recently become a key focus of healthcare systems globally, heavily influenced by the COVID-19 pandemic and the increased need for remote care pathways. Implementing telemedicine can bring myriad benefits for both patients and providers, and has the potential to make a huge impact by improving access to abortion care. In both the United Kingdom and United States, abortion is heavily regulated—exceptionally so when compared to other routine healthcare. This regulation has had the impact of exacerbating the social and geographical

circumstances that can make access to abortion services difficult. This book examines telemedical provision of early medical abortion, alongside the access barriers created by laws in the United Kingdom and United States. It critically appraises a series of developments in this rapidly evolving subject, providing an up-to-date and well-informed analysis. In doing so, it argues that there is a moral imperative to introduce, retain, or reinstate (as applicable) telemedical early medical abortion.
