Virtual Slavica Michael Neubert, 2013-01-11 Get an inside view of producing digital information projects Digital technology has provided great opportunities as well as colossal challenges for information professionals at Slavic libraries, collections, and archives. Virtual Slavica: Digital Libraries, Digital Archives presents leading information experts exploring the monumental task of converting Slavic manuscripts and books for presentation in the digital realm. Readers get a clear inside view of how to conquer the various challenges that arise within digital library and archive projects through detailed descriptions of specific projects discussed in easy-to-understand language. Slavic studies present innate problems when attempts are made to allow access to the material over the Internet. The Cyrillic alphabet is just one of the huge stumbling blocks standing in the way of universal access to this important material. Virtual Slavica: Digital Libraries, Digital Archives provides practical strategies for anyone looking for answers to problems within their own virtual information project. Copyright issues, digital reference, text encoding, online translation, presentation issues, and use of grant funding are some of the topics comprehensively discussed to give information professionals clear solutions to the issues they may be facing. The book is carefully referenced. Virtual Slavica: Digital Libraries, Digital Archives examines: the persistence of multiple standards for digitally handling the Cyrillic alphabet presenting the Comintern archives online FEB-web—its structure, the creation of digital editions, its plans for the future copyright issues in the twenty-first century Meeting of Frontiers—the reorganization of the text content of the international collaborative digital library project at the Library of Congress standardized encoding practical and theoretical programming issues the unforeseen difficulties—and solutions—to complete a grant-funded digital Slavic project and more Virtual Slavica: Digital Libraries, Digital Archives is of keen interest to librarians, archivists, Slavic studies academics, and library and information science educators and students.

The Semantic Web Explained Péter Szeredi, Gergely Lukácsy, Tamás Benkő, 2014-09-11 The Semantic Web is a new area of research and development in the field of computer science that aims to make it easier for computers to process the huge amount of information on the web, and indeed other large databases, by enabling them not only to read, but also to understand the information. Based on successful courses taught by the authors, and liberally sprinkled with examples and exercises, this comprehensive textbook describes not only the theoretical issues underlying the Semantic Web, but also algorithms, optimisation ideas and implementation details. The book will therefore be valuable to practitioners as well as students, indeed to anyone who is interested in Internet technology, knowledge engineering or description logics. Supplementary materials available online include the source code of program examples and solutions to selected exercises.

XML Retrieval Mounia Lalmas,2009-08-08 Documents usually have a content and a structure. The content refers to the text of the document, whereas the structure refers to how a document is logically organized. An increasingly common way to encode the structure is through the use of a mark-up language. Nowadays, the most widely used mark-up language for representing structure is the eXtensible Mark-up Language (XML). XML can be used to provide a focused access to documents, i.e. returning XML elements, such as sections and paragraphs, instead of whole documents in response to a query. Such focused strategies are of particular benefit for information repositories containing long documents, or documents covering a wide variety of topics, where users are directed to the most relevant content within a document. The increased adoption of XML to represent a document structure requires the development of tools to effectively access documents marked-up in XML. This book provides a detailed description of query languages, indexing strategies, ranking algorithms, presentation scenarios developed to access XML documents. Major advances in XML retrieval were seen from 2002 as a result of INEX, the Initiative for Evaluation of XML Retrieval. INEX, also described in this book, provided test sets for evaluating XML retrieval effectiveness. Many of the developments and results described in this book were investigated within INEX. Table of Contents: Introduction / Basic XML Concepts / Historical Perspectives / Query Languages / Indexing Strategies / Ranking Strategies / Presentation Strategies / Evaluating XML Retrieval Effectiveness / Conclusions

Database and XML Technologies Zohra Bellahsène, Tova Milo, Michael Rys, Dan Suciu, Rainer Unland, 2004-07-30 Modern database systems enhance the capabilities of traditional database systems by their ability to handle any kind of data, including text, image, audio, and video. Today, database systems are particularly relevant to the Web, as they can provide input to content generators for Web pages, and can handle queries issued over the Internet. The eXtensible Markup Language (XML) is used in applications running the gamut from content management through publishing to Web services and e-commerce. It is used as the universal communication language for exchanging music and graphics as well as purchase orders and technical documentation. As database systems increasingly talk to each other over the Web, there is a fast-growing desire to use XML as the standard exchange format. As a result, many relational database systems can export data as XML documents and import data from XML documents and provide query and update capabilities for XML data. In addition, so-called native XML database and integration systems are appearing on the database market, whose claim is to be especially tailored to storing, maintaining, and easily accessing XML documents. After the huge success of the 1st XML Database Symposium (XSym 2003) last year in Berlin (already then in conjunction with VLDB) it was decided to establish this symposium as an annual event that is supposed to take place as an integral part of VLDB. The goal of this symposium is to provide a high-quality platform for the presentation and discussion of new research results and system developments. It is targeted at scientists, practitioners, vendors and users of XML and database technologies.

Advances in XML Information Retrieval Norbert Fuhr, Mounia Lalmas, Saadia Malik, Zoltán Szilávik, 2005-05-13 The ultimate goal of many information access systems (e.g., digital libraries, the Web, intranets) is to provide the right content to their end-users. This content is increasingly a mixture of text, multimedia, and metadata, and is formatted according to the adopted W3C standard for information repositories, the so-called eXtensible Markup Language (XML). Whereas many of today's information access systems still treat documents as single large (text) blocks, XML offers the opportunity to exploit the internal structure of documents in order to allow for more precise access thus providing more specific answers to user requests. Providing effective access to XML-based content is therefore a key issue for the success of these systems. The aim of the INEX campaign (Initiative for the Evaluation of XML Retrieval), which was set up at the beginning of 2002, is to establish infrastructures, XML test suites, and appropriate measurements for evaluating the performance of information retrieval systems that aim at giving effective access to XML content. More precisely, the goal of the INEX initiative is to provide means, in the form of a large XML test collection and appropriate scoring methods, for the evaluation of content-oriented XML retrieval systems.

Combinatorial Optimization and Applications Weili Wu, Ovidiu Daescu, 2010-12-15 The 4th Annual International Conference on Combinatorial Optimization and Applications (COCOA 2010) took place in Big Island, Hawaii, USA, December 18-20, 2010. Past COCOA conferences were held in Xi'an, China (2007), Newfoundland, Canada (2008) and Huangshan, China (2009). COCOA 2010 provided a forum for researchers working in the areas of combinatorial optimization and its applications. In addition to theoretical results, the conference also included recent

works on experimental and applied research of general algorithmic interest. The Program Committee received 108 submissions from more than 23 countries and regions, including Australia, Austria, Canada, China, Denmark, France, Germany, Hong Kong, India, Italy, Japan, Korea, Mexico, New Zealand, Poland, Slovak Republic, Spain, Sweden, Switzerland, Taiwan, UK, USA, Vietnam, etc. Among the 108 submissions, 49 regular papers were selected for presentation at the conference and are included in this volume. Some of these papers will be selected for publication in a special issue of the Journal of Combinatorial Optimization, a special issue of Theoretical Computer Science, a special issue of Optimization Letters, and a special issue of Discrete Mathematics, Algorithms and Applications under the standard refereeing procedure.
