The Hidden Half of Nature: The Microbial Roots of Life and Health David R. Montgomery, Anne Biklé, 2015-11-16 Sure to become a game-changing guide to the future of good food and healthy landscapes. —Dan Barber, chef and author of *The Third Plate* Prepare to set aside what you think you know about yourself and microbes. The Hidden Half of Nature reveals why good health—for people and for plants—depends on Earth’s smallest creatures. Restoring life to their barren yard and recovering from a health crisis, David R. Montgomery and Anne Biklé discover astounding parallels between the botanical world and our own bodies. From garden to gut, they show why cultivating beneficial microbiomes holds the key to transforming agriculture and medicine.

Last Night in the OR Bud Shaw, 2015-09-15 For readers of Henry Marsh's *Do No Harm*, Paul A. Ruggieri's *Confessions of a Surgeon*, and Atul Gawande's *Better*, a pioneering surgeon shares memories from a life in one of surgery’s most demanding fields The 1980s marked a revolution in the field of organ transplants, and Bud Shaw, M.D., who studied under Tom Starzl in Pittsburgh, was on the front lines. Now retired from active practice, Dr. Shaw relays gripping moments of anguish and elation, frustration and reward, despair and hope in his struggle to save patients. He reveals harshly intimate moments of his medical career: telling a patient's husband that his wife has died during surgery; struggling to complete a twenty-hour operation as mental and physical exhaustion inch closer and closer; and flying to retrieve a donor organ while the patient waits in the operating room. Within these more emotionally charged vignettes are quieter ones, too, like growing up in rural Ohio, and being awakened late at night by footsteps in the hall as his father, also a surgeon, slipped out of the house to attend to a patient in the ER. In the tradition of Mary Roach, Jerome Groopman, Eric Topol, and Atul Gawande, *Last Night in the OR* is an exhilarating, fast-paced, and beautifully written memoir, one that will captivate readers with its courage, intimacy, and honesty.

Out Of Control Kevin Kelly, 2009-04-30 *Out of Control* chronicles the dawn of a new era in which the machines and systems that drive our economy are so complex and autonomous as to be indistinguishable from living things.

Global Trends 2030 National Intelligence Council, 2018-02-07 This important report, *Global Trends 2030-Alternative Worlds*, released in 2012 by the U.S. National Intelligence Council, describes megatrends and potential game changers for the next decades. Among the megatrends, it analyzes: - increased individual empowerment - the diffusion of power among states and the ascent of a networked multi-polar world - a world's population growing to 8.3 billion people, of which sixty percent will live in urbanized areas, and surging cross-border migration - expanding demand for food, water, and energy It furthermore describes potential game changers, including: - a global economy that could thrive or collapse - increased global insecurity due to regional instability in the Middle East and South Asia - new technologies that could solve the problems caused by the megatrends - the possibility, but by no means the certainty, that the U.S. with new partners will reinvent the international system Students of trends, forward-looking entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades will find this essential reading.

The Fourth Industrial Revolution Klaus Schwab, 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior

period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Thinking Like an Island Jennifer Chirico,Gregory S. Farley,2015-04-30 Hawaii is a rare and special place, in which beauty and isolation combine to form a vision of paradise. That isolation, though, comes at a price: resources in modern-day Hawaii are strained and expensive, and current economic models dictate that the Hawaiian Islands are reliant upon imported food, fuels, and other materials. Yet the islands supported a historic Hawaiian population of a million people or more. This was possible because Hawaiians, prior to European contact, had learned the ecological limits of their islands and how to live sustainably within them. Today, Hawaii is experiencing a surge of new strategies that make living in the islands more ecologically, economically, and socially resilient. A vibrant native agriculture movement helps feed Hawaiians with traditional foods, and employs local farmers using traditional methods; efforts at green homebuilding help provide healthy, comfortable housing that exists in better harmony with the environment; efforts to recycle wastewater help reduce stress on fragile freshwater resources; school gardens help feed families and reconnect them with local food and farming. At the same time, many of the people who have developed these strategies find that their processes reflect, and in some cases draw from, the lessons learned by Hawaiians over thousands of years. This collection of case studies is a road map to help other isolated communities, island and mainland, navigate their own paths to sustainability, and establishes Hawaii as a model from which other communities can draw inspiration, practical advice, and hope for the future.

Global Trends 2030 National Intelligence Council (U.S.),2012 This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.
