Power Transmissions George Dobre,2013-07-11 This books contains the Proceedings of the 4th International Conference on Power Transmissions, that was held in Sinaia, Romania from June 20 -23, 2012. Power Transmissions is a very complex and multi-disciplinary scientific field of Mechanical Engineering that covers the different types of transmissions (mechanical, hydraulic, pneumatic) as well as all the machine elements involved, such as gears, bearings, shafts, couplings and a lot more. It concerns not only their basic theory but also their design, analysis, testing, application and maintenance. The requirements set to modern power transmissions are really tough to meet: They need to be more efficient, stronger, smaller, noiseless, easier to produce and to cost less. There is a strong demand to become easier in operation and maintenance, or even automatic and in maintenance-free. Last but not least, they should be easily recycled and respect the environment. Joint efforts of specialists from both academia and industry can significantly contribute to fulfill these needs. The main goal of this conference was to bring together experts from all over the world and present the latest developments in the field of Power Transmissions.

Catalytic, Photocatalytic and Electrocatalytic Processes for the Valorisation of CO₂ Ilenia Rossetti,Gianguido Ramis,2019-11-19 Increasing attention is being paid to the development of effective technologies for the sequestration of CO₂ and its storage. Hopefully, this will result in processes that can lead to its valorisation as a chemical, e.g., for the regeneration of fuels, but also for the production of intermediates. These are usually energy demands and rather slow processes, requiring energy input and catalysts. Some examples are the innovative strategies for the hydrogenation, photoconversion, or electroreduction of carbon dioxide. This book collects original research papers, reviews, and commentaries focused on the challenges related to the valorisation and conversion of CO₂.

Understanding EU Decision-Making Edward Best,2016-02-04 This book presents in a concise and accessible way why the EU institutional system exists in its present form, how

the EU fits into the world as a system of governance, and who is involved in EU policy processes. It outlines the historical context which has shaped the EU system, gives a summary of the system's basic principles and structures, and describes its actors, procedures and instruments. The main theme is to show that EU decision-making is not just a matter of action at some higher and separate level, of 'them and us', but rather that it involves different forms of cooperation between European, national and regional authorities, as well as interaction between public and private actors. Numerous short case studies illustrate how people's day-to-day activities are affected by EU decisions, and how individuals' concerns are represented in the decision-making process. The book provides insights and examples which will be very helpful for all students of European integration. It will also be a valuable resource for European citizens wishing to understand the basic realities and rationales, as well as some of the dilemmas, behind EU policy-making.
