SPSS/PC+ für Einsteiger Deziderio Šonje, 2013-04-17 Das Ziel dieses Buches ist es, dem interessierten Laien Grundkenntnisse der empirischen Datenanalyse zu vermitteln. Im Vordergrund des Interesses steht dabei vor allem das Erlernen des Einsatzes und der Handhabung des Datenanalysesystems SPSS/PC+ (Statistical Package for the Social Sciences/ Personal Computer). Daneben werden Kenntnisse im Umgang mit dem Computer, sowie auch ein erster Einstieg in die empirische Datenanalyse und -interpretation vermittelt. Ausgehend von dieser Zielsetzung wurde ein didaktisches Konzept entwickelt, welches sich, aufbauend auf den Möglichkeiten eines Anfängers, so weit wie möglich an dem Forschungsablauf orientiert, wie er tatsächlich in der Praxis stattfindet. Im einzelnen wurde dabei versucht, die unumgänglichen theoretischen Grundkenntnisse über Datenanalyse so weit es ging nach hinten zu schieben, um möglichst schnell mit der eigentlichen Datenanalyse beginnen zu können. Die Überlegung, die hinter diesem Konzept steht, beruht auf der Erfahrung, daß oftmals diejenigen, die anfangen ein neues System zu erlernen, bereits am Anfang mit einer Fülle von -zweifelloso notwendigen -Grundkenntnissen überfrachtet werden. Viele Einsteiger fühlen sich daher oft überfordert und geben unnötigerweise zu früh auf. Diesem Verhalten sollte durch den schnellen Einstieg in die Praxis vorgebaut werden. Dabei wurde ganz bewußt in Kauf genommen, daß grundlegendes Wissen beispielsweise über den Aufbau von Datensätzen oder die Einsicht, warum eine Anweisung an einer ganz bestimmten Stelle stehen muß, zunächst außen vor blieb. Dies schien notwendig zu sein, um das erklärte Ziel, den Einsteiger möglichst schnell in die Lage zu versetzen, mit SPSS/PC+ eigenständig arbeiten zu können, nicht aus den Augen zu verlieren.

IUTAM Symposium on Emerging Trends in Rotor Dynamics K. Gupta, 2011-01-06 Rotor dynamics is an important branch of dynamics that deals with behavior of rotating machines ranging from very large systems like power plant rotors, for example, a turbogenerator, to very small systems like a tiny dentist's drill, with a variety of rotors such as pumps, compressors, steam/gas turbines, motors, turbopumps etc. as used for example in process industry, falling in between. The speeds of these rotors vary in a large range, from a few hundred RPM to more than a hundred thousand RPM. Complex systems of rotating shafts depending upon their specific requirements, are supported on different types of bearings. There are rolling element bearings, various kinds of fluid film bearings, foil and gas bearings, magnetic bearings, to name but a few. The present day rotors are much lighter, handle a large amount of energy and fluid mass, operate at much higher speeds, and therefore are most susceptible to vibration and instability problems. This have given rise to several interesting physical phenomena, some of which are fairly well understood today, while some are still the subject of continued investigation. Research in rotor dynamics started

more than one hundred years ago. The progress of the research in the early years was slow. However, with the availability of larger computing power and versatile measurement technologies, research in all aspects of rotor dynamics has accelerated over the past decades. The demand from industry for light weight, high performance and reliable rotor-bearing systems is the driving force for research, and new developments in the field of rotor dynamics. The symposium proceedings contain papers on various important aspects of rotor dynamics such as, modeling, analytical, computational and experimental methods, developments in bearings, dampers, seals including magnetic bearings, rub, impact and foundation effects, turbomachine blades, active and passive vibration control strategies including control of instabilities, nonlinear and parametric effects, fault diagnostics and condition monitoring, and cracked rotors. This volume is of immense value to teachers, researchers in educational institutes, scientists, researchers in R&D laboratories and practising engineers in industry.
