Dan Suciu,Gottfried Vossen

The World Wide Web and Databases Dan Suciu, Gottfried Vossen, 2003-06-29 With the development of the World-Wide Web, data management problems have branched out from the traditional framework in which tabular data is processed under the strict control of an application, and address today the rich variety of information that is found on the Web, considering a variety of flexible environments under which such data can be searched, classified, and processed. Database systems are coming forward today in a new role as the primary backend for the information provided on the Web. Most of today's Web accesses trigger some form of content generation from a database, while electronic commerce often triggers intensive DBMS-based applications. The research community has begun to revise data models, query languages, data integration techniques, indexes, query processing algorithms, and transaction concepts in order to cope with the characteristics and scale of the data on the Web. New problems have been identified, among them goal-oriented information gathering, management of semi-structured data, or database-style query languages for Web data, to name just a few. The International Workshop on the Web and Databases (WebDB) is a series of workshops intended to bring together researchers interested in the interaction between databases and the Web. This year's WebDB 2000 was the third in the series, and was held in Dallas, Texas, in conjunction with the ACM SIGMOD International Conference on Management of Data.

Traffic Analysis and Design of Wireless IP Networks Toni Janevski, 2003 Presents a solid analytical framework for traffic analysis in wireless IP networks and provides valuable analytical tools for network planning, dimensioning, and optimization for wireless IP networks in a multiple classes environment.

Affiliate Marketing Success-Step By Step Guide to Make 1000% ROI Using Dirt Cheap or Free Traffic Sources and Top Converting Affiliate Products Mostafa Afshari, 2015-07-31 Affiliate Marketing, if done properly, is the most lucrative online business. Every experienced online marketer knows this formula: cheap, quality traffic + top converting affiliate programs = huge positive ROI. This book is all about optimizing this formula. I have condensed my 15 years of online marketing experience in Affiliate Marketing Success-Step By Step Guide; so, you can be assured that you get the information from the horse's mouth. You will learn strategic methods to drive very cheap (even less than \$0.01 CPC) or 100% free traffic to your products from 30 (free and paid) tested traffic sources, how to find your best suitable niche and super EPC affiliate programs, how to match the best fitted, converting traffic sources to your affiliate programs to make money online and how to start your affiliate marketing in a few days and reach to the highest effectiveness with zero or very small out of the pocket budget. Both beginners and experienced marketers will find this step by step affiliate marketing guide packed with working methods for 2015 and beyond. The book covers many of practical topics including: - 30 Measly Cheap or Free, Author's Tested ROI Making Traffic Sources - A Unique Technique to Create Unlimited Original, Human Edited Articles about Any Niche or Affiliate Program in Just 15 Minutes - Proactive Online Marketing: How Calculate the Profitability of Your Advertising Campaigns Before Spending A Dime - How to Triple Your Current Organic Traffic Each Month Using a Guaranteed White Hat SEO Trick - 50 Super Converting Affiliate Programs Pre-Matched with Their ROI Driven Traffic Sources Ready to Make Money Online - 6 Essential SEO Tips for Affiliate Marketing in 2015 and Next Years - A Little Ethical Trick to Spy on Other Affiliates Traffic Sources and Steal Their Traffic - An Unused Method to Reach 80% of Untapped Organic Traffic and Dominate Search Engines' First Page Ranks - Smart Ideas to Reach 500%-1000% ROIs in Social Marketing - How to Get Experts Answer to Any Affiliate Marketing Question with A Few Clicks of Mouse

Passive and Active Measurement Jelena Mirkovic, Yong Liu, 2015-03-03 This book constitutes the refereed proceedings of the 16th International Conference on Passive and Active Measurement, PAM 2015, held in New York, NY, USA, in March 2015. The 27 full papers presented were carefully reviewed and selected from 100 submissions. The papers have been organized in the following topical sections: DNS and Routing, Mobile and Cellular, IPv6, Internet-Wide, Web and Peer-to-Peer, Wireless and Embedded, and Software Defined Networking.

Passive and Active Network Measurement Mark Claypool, Steve Uhlig, 2008-04-29 The 2008 edition of the Passive and Active Measurement Conference was the ninth of a series of successful events. Since 2000, the Passive and Active Measurement (PAM) conference has provided a forum for presenting and discussing innovative and early work in the area of Internet measurement. PAM has a tradition of being a workshop-like conference with lively discussion and active participation from all attendees. This event focuses on research and practical applications of network measurement and analysis techniques. This year's conference was held in Cleveland, Ohio. PAM2008's call for papers attracted 71 submissions. Each paper was carefully reviewed by at least three members of the Technical Program Committee. The reviewing process led to the acceptance of 23 papers. The papers were categorized into eight sessions covering the following areas: addressing and topology, applications, classification and sampling, measurement systems and frameworks, wireless 802.11, tools, characterization and trends, and malware and anomalies. We are very grateful to Endace, Intel and Cisco Systems whose sponsoring allowed us to keep low registration costs and also to offer several travel grants to PhD students. We are also grateful to Case Western Reserve University for sponsoring PAM as a host.

Traffic Monitoring and Analysis Marco Mellia, 2010-04 This book constitutes the proceedings of the Second International Workshop on Traffic Monitoring and Analysis, TMA 2010, held in Zurich, Switzerland, on April 7, 2010 - colocated with PAM 2010, the 11th Passive and Active Measurement conference. The workshop is an initiative from the COST Action IC0703 Data Traffic Monitoring and Analysis: Theory, Techniques, Tools and Applications for the Future Networks. The 14 papers contained in this volume were carefully reviewed and selected from 34 submissions. They encompass research areas related to traffic analysis and classification, measurements, topology, discovery, detection of specific applications and events, packet inspection, and traffic inference. The papers are organized in topical sections on analysis of internet datasets, tools for traffic analysis and monitoring, traffic classification, and performance measurements.

Web Information Systems Engineering - WISE 2016 Wojciech Cellary, Mohamed F. Mokbel, Jianmin Wang, Hua Wang, Rui Zhou, Yanchun Zhang, 2016-11-01 This two volume set LNCS 10041 and LNCS 10042 constitutes the proceedings of the 17th International Conference on Web Information Systems Engineering, WISE 2016, held in Shanghai, China, in November 2016. The 39 full papers and 31 short papers presented in these proceedings were carefully reviewed and selected from 233 submissions. The papers cover a wide range of topics such as Social Network Data Analysis; Recommender Systems; Topic Modeling; Data Diversity; Data Similarity; Context-Aware Recommendation; Prediction; Big Data Processing; Cloud Computing; Event Detection; Data Mining; Sentiment Analysis; Ranking in Social Networks; Microblog Data Analysis; Query Processing; Spatial and Temporal Data; Graph Theory; Non-Traditional Environments; and Special Session on Data Quality and Trust in Big Data.

Wireless Systems and Mobility in Next Generation Internet Gabriele Kotsis, 2005-03-23 This book constitutes the thoroughly refereed postproceedings of the first international workshop organized by the European Network of Excellence on Next Generation Internet, EURO-NGI 2004, held in Dagstuhl Castle, Germany in June 2004. The 16 revised full research papers presented were carefully selected during two rounds of reviewing and improvement. The papers are organized in topical sections on network and capacity planning, medium access and admission control, QoS in wireless networks, and network inter-connection and resource access. The book provides a most relevant presentation of current issues of the next generation Internet in the area of wireless communication for mobile users.

NETWORKING 2002: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications Enrico Gregori, Marco Conti, Andrew T. Campbell, Guy Omidyar, Moshe Zukerman, 2007-06-30 This book constitutes the refereed proceedings of the Second IFIP-TC6 Networking Conference, Networking 2002. Networking 2002 was sponsored by the IFIP Working Groups 6.2, 6.3, and 6.8. For this reason the conference was structured into three tracks: i) Networking Technologies, Services, and Protocols, ii) Performance of Computer and Communication Networks, and iii) Mobile and Wireless Communications. This year the conference received 314 submissions coming from 42 countries from all five continents Africa (4), Asia (84), America (63), Europe (158), and Oceania (5). This represents a 50% increase in submissions over the first conference, thus indicating that Networking is becoming a reference conference for worldwide researchers in the networking community. With so many papers to choose from,

the job of the Technical Program Committee, to provide a conference program of the highest technical excellence, was both challenging and time consuming. From the 314 submissions, we finally selected 82 full papers for presentation during the conference technical sessions. To give young researchers and researchers from emerging countries the opportunity to present their work and to receive useful feedback from participants, we decided to include two poster sessions during the technical program. Thirty-one short papers were selected for presentation during the poster sessions. The conference technical program was split into three days, and included, in addition to the 82 refereed contributions, 5 invited papers from top-level researchers in the networking community.

Passive and Active Measurement Nina Taft, Fabio Ricciato, 2012-03-09 This book constitutes the refereed proceedings of the 13th International Conference on Passive and Active Measurement, PAM 2012, held in Vienna, Austria, in March 2012. The 25 revised full papers presented were carefully reviewed and selected from 83 submissions. The papers were arranged into eight sessions: traffic evolution and analysis, large scale monitoring, evaluation methodology, malicious behavior, new measurement initiatives, reassessing tools and methods, perspectives on internet structure and services, and application protocols.

Web Metrics Jim Sterne, 2003-05-12 There now exists a wealth of tools and techniques that can determine if and how a Web site is providing business value to its owners. This book is a survey of those metrics and is as important to IT executives as it is to marketing professionals. Jim Sterne is recognized worldwide as a leading Internet business expert and is the author of several Wiley books, including *WWW Marketing*, Third Edition (0-471-41621-5). Explains the criteria for building a successful site, surveying the tools, services, techniques, and standards for Web measurement, and fully integrating those metrics with the customer experience. Companion Web site contains links to online tools, resources, and white papers.

The Effects of Traffic Structure on Application and Network Performance Jay Aikat, Kevin Jeffay, F. Donelson Smith, 2012-12-12 Over the past three decades, the Internet's rapid growth has spurred the development of new applications in mobile computing, digital music, online video, gaming and social networks. These applications rely heavily upon various underlying network protocols and mechanisms to enable, maintain and enhance their Internet functionality. *The Effects of Traffic Structure on Application and Network Performance* provides the necessary tools for maximizing the network efficiency of any Internet application, and presents groundbreaking research that will influence how these applications are built in the future. The book outlines how to design and run all types of networking experiments, and establishes the best practices in synthetic traffic generation for current and future researchers and practitioners to follow. It addresses some basic concepts and methods of traffic generation, but also details extensive empirical research in testing and evaluating network protocols and applications within a laboratory setting. *The Effects of Traffic Structure on Application and Network Performance* is designed as a reference book for networking professionals who must design, plan, test and evaluate their networks. Advanced-level students and researchers in computer science and engineering will find this book valuable as well.

Web Content Caching and Distribution Fred Douglis, Brian D. Davison, 2004-08-10 Web caching and content delivery technologies provide the infrastructure on which systems are built for the scalable distribution of information. This proceedings of the eighth annual workshop, captures a cross-section of the latest issues and techniques of interest to network architects and researchers in large-scale content delivery. Topics covered include the distribution of streaming multimedia, edge caching and computation, multicast, delivery of dynamic content, enterprise content delivery, streaming proxies and servers, content transcoding, replication and caching strategies, peer-to-peer content delivery, and Web prefetching. *Web Content Caching and Distribution* encompasses all areas relating to the intersection of storage and networking for Internet content services. The book is divided into eight parts: mobility, applications, architectures, multimedia, customization, peer-to-peer, performance and measurement, and delta encoding.

Large Scale Networks Radu Dobrescu, Florin Ionescu, 2016-10-03 This book offers a rigorous analysis of the achievements in the field of traffic control in large networks, oriented on two main aspects: the self-similarity in traffic behaviour and the scale-free characteristic of a complex network. Additionally, the authors propose a new insight in understanding the inner nature of things, and the cause-and-effect based on the identification of relationships and behaviours within a model, which is based on the study of the influence of the topological characteristics of a network upon the traffic behaviour. The effects of this influence are then discussed in order to find new solutions for traffic monitoring and diagnosis and also for traffic anomalies prediction. Although these concepts are illustrated using highly accurate, highly aggregated packet traces collected on backbone Internet links, the results of the analysis can be applied for any complex network whose traffic processes exhibit asymptotic self-similarity, perceived as an adaptability of traffic in networks. However, the problem with self-similar models is that they are computationally complex. Their fitting procedure is very time-consuming, while their parameters cannot be estimated based on the on-line measurements. In this aim, the main objective of this book is to discuss the problem of traffic prediction in the presence of self-similarity and particularly to offer a possibility to forecast future traffic variations and to predict network performance as precisely as possible, based on the measured traffic history.

Web Caching and Its Applications S.V. Nagaraj, 2006-04-18 The last decade has seen a tremendous growth in the usage of the World Wide Web. The Web has grown so fast that it seems to be becoming an unusable and slow behemoth. Web caching is one way to tame and make this behemoth a friendly and useful giant. The key idea in Web caching is to cache frequently accessed content so that it may be used profitably later. This book focuses entirely on Web caching techniques. Much of the material in this book is very relevant for those interested in understanding the wide gamut of Web caching research. It will be helpful for those interested in making use of the power of the Web in a more profitable way. Audience and purpose of this book This book presents key concepts in Web caching and is meant to be suited for a wide variety of readers including advanced undergraduate and graduate students, programmers, network administrators, researchers, teachers, technologists and Internet Service Providers (ISPs).

Web Marketing That Works Adam Franklin, Toby Jenkins, 2014-03-17 Practical tips on using the web to boost your business, no matter what business you're in. Infinite Web Traffic Stephanie Woolford, 2005-03-09 Due to the rapid changes and daily growth in the internet marketplace, new ground-breaking methods of traffic generation are continuously being identified and put into practice by those of us who have achieved great success with internet marketing. One of those is Infinite Web Traffic.

Programmable Networks for IP Service Deployment Alex Galis, 2004 Today, programmable networks are being viewed as the solution for the fast, flexible and dynamic deployment of new telecommunications network services. At the vanguard of programmable network research is the Future Active IP Networks (FAIN) project. The authors of this book discuss their research in FAIN so you can get on the inside track to tomorrow's technology. Moreover, the book provides you with detailed guidelines for designing managed IP programmable networks.
