Guidelines on Active Content and Mobile Code Wayne A. Jansen,2010 The private and public sectors depend heavily upon info. tech. systems to perform essential, mission-critical functions. As existing technology evolves and new technologies are introduced to provide improved capabilities and advanced features in systems, new technology-related vulnerabilities often arise. Organizations implementing and using advanced technologies must be on guard. One such category of technologies is active content, which refers to electronic documents that can carry out or trigger actions automatically without an individual directly or knowingly invoking the actions. Exploits based on vulnerabilities in active content technologies can be insidious. This report recommends key guidelines for dealing with active content. Illus.

Physical Security and the Inspection Process Carl Roper,1997
Physical Security and The Inspection Process illustrates the basic

concepts and procedures for development, implementation, and management of a physical security inspection program. It provides personnel with a model inspection procedure that can be specifically tailored to meet any company's reasonable minimum standards. With detailed checklists broken down by security subject area, the reader will be able to develop site-specific checklists to meet organizational needs. Physical Security and the Inspection Process is an important reference for security managers, physical security inspection team chiefs, team members, and others responsible for physical security. C. A. Roper is a security specialist and lead instructor with the Department of Defense Security Institute, where he provides general and specialized security training throughout the US, in Germany, and in Panama. Previously, Mr. Roper worked for the assistant chief of staff for intelligence, Department of the Army, and the Defense Communications Agency. He is a counter-intelligence technician with the US Army Reserve, was activated for Desert Shield/Desert Storm, and has provided training and other support to various operations with the Army, Navy, and foreign national forces. The most comprehensive physical security inspection checklist available A model inspection procedure that can be specifically tailored to any organization Provides practical guidelines for ensuring compliance with standards of effectiveness

Information Technology Office of Inspector General Department O,2015-12-28 This report represents the results of our audit of network and systems security at the Office of the Comptroller of the Currency (OCC). Our objective was to determine whether sufficient protections exist to prevent and detect unauthorized access into OCC's network and systems. To accomplish our objective, we performed a series of internal and external vulnerability assessments and

penetration tests on OCC's workstations, servers, network-attached peripherals (such as cameras and printers), infrastructure devices, and Internet websites. We also tested the physical security of OCC's headquarters and performed social engineering tests by e-mail and phone phishing. Additionally, we followed up on the findings in our prior report from 2008. Due to the time that has passed since our prior report, we did not determine if the findings that are repeated in this report were issues that had been resolved and then deteriorated back to the initial condition, or if they were long standing issues that had not been addressed. We performed our fieldwork in Washington, DC, in February and March 2013. Our objective, scope, and methodology are described in more detail in appendix 1.

Management Advisory Report on Cybersecurity Council of the Inspectors General, 2013-07-29 At the request of the Council of the Inspectors General on Integrity and Efficiency (CIGIE) Homeland Security Roundtable (HSR) and with the approval of the CIGIE Executive Council, the Department of Homeland Security (DHS) Office of Inspector General (OIG) chaired a Working Group of attorneys and information technology (IT) professionals (IT security professionals, IT auditors, and other IT practitioners) and other cybersecurity experts from OIGs of various sizes, including representatives of the presidentially appointed and designated federal entity Inspectors General (IG) community.

Inspect and Protect Keith Swift, Ph.D, 2018-10-16 Inspect and Protect was written as a protocol for avoiding litigation, for building inspectors. It is comprised of dozens of essays that were written and published in various magazines, in which inspectors were warned about the threat that litigation poses to their livelihoods. If all litigation was fair and honest there would be no need for concern, but it is not,

as this book documents with actual case histories. And, unfortunately, the threat is growing. The good news is that it takes very little effort for inspectors to protect themselves; it is simply a matter of understanding the threat, and then making a few fundamental changes in the way they inspect and report on properties.

Self-Inspection Handbook for Nisp Contractors Cdse,2016-05-23

Contractors shall review their security system on a continuing basis and shall also conduct a formal self-inspection at intervals consistent with risk management principles. NISPOM The National Industrial Security Program Operating Manual (NISPOM) requires all participants in the National Industrial Security Program (NISP) to conduct their own security reviews (self-inspections). This Self-Inspection Handbook is designed as a job aid to assist you in complying with this requirement. It is not intended to be used as a checklist only. Rather it is intended to assist you in developing a viable self-inspection program specifically tailored to the classified needs of your cleared company. You will also find we have included various techniques that will help enhance the overall quality of your self-inspection. To be most effective it is suggested that you look at your self-inspection as a three-step process: 1) pre-inspection 2) self-inspection 3) post-inspection This printed version includes plenty of notes pages for gathering data from inspections and interviews and performing analysis.
