Acupuncture Therapy for Neurological Diseases Ying Xia,Xiaoding Cao,Gen-Cheng Wu,Jieshi Cheng,2010-09-08 Acupuncture therapy has been practiced in China and other Asian countries for more than two thousand years. Modern clinical research has confirmed the impressive therapeutic effect of acupuncture on numerous human ailments, such as controlling pain, nausea, and vomiting. However, the biological mechanisms of acupuncture are still under debate. In Traditional Chinese Medicine (TCM), the mechanism of acupuncture therapy is explained by a meridian model. According to this model, acupuncture is believed to treat the diseased organs by modulating two conditions known as Yin and Yang, which represent all the opposite principles that people find in the universe, both inside and outside the human body. Yin and Yang complement each other, and are subjected to changes between each other. The balance of Yin and Yang is thought to be maintained by Qi, an energy substance flowing constantly through the meridian, a network connecting all the organs of the body. The illness, according to this theory, is the temporary dominance of one principle over the other, owing to the blockade of the Qi from flowing through the meridian under certain circumstance. The axiom of “No stagnation, No pain” in TCM summarizes this concept. Thus, the goal of acupuncture treatment is to restore the balance of Yin and Yang conditions in the diseased organ(s). This theory has been considered to be useful to guide this ancient therapy, such as carrying out diagnosis, deciding on the principle, and selecting the acupoints.

Acupuncture in Neurological Conditions E-Book Val Hopwood,Clare Donnellan,2010-07-23 Written by two leading experts in the field, Acupuncture in Neurological Conditions aims to improve patient care by combining Western and Traditional Chinese Medicine (TCM) concepts of treatment.

The language of TCM is uniquely combined with that of evidence-based clinical reasoning to provide an approach relevant to both acupuncture and physiotherapy clinical practice. All major types of neurological conditions encountered in clinical practice are examined. Chinese medical patterns relevant to the application of acupuncture are described, as well as key patterns of dysfunction based on a Western medical perspective. The place of acupuncture within the overall management of different neurological conditions is also discussed. Clinical reasoning options from both TCM and Western medical perspectives are provided, and illustrated by real cases from clinical practice forming a sound platform for true integrated medicine. Fully evidence-based Provides clinical reasoning options from TCM and Western medical perspectives Illustrates clinical reasoning with real cases from clinical practice Provides detailed examination of all major types of neurological conditions encountered in clinical practice.

Integrative Neurology John W. McBurney, Andrew T. Weil, Ilene S. Ruhoy, 2020 Neurology is a

quantitatively small corner of medicine that, increasingly, occupies a position of outsized importance and distinction in both the practice of medicine and in the health and well-being of society. The Decade of the Brain came into public awareness in 1990 as an initiative of president George W. Bush involving the NIH and NIMH to enhance public awareness of the benefits to be derived from brain research(1). In the intervening 20 years since 1999, we have seen significant increases in understanding the myriad of neurological diseases that confront society--

Disease Control Priorities, Third Edition (Volume 4) Vikram Patel, Dan Chisholm, Tarun Dua, Ramanan Laxminarayan, Mari'a Lena Medina-Mora, Theo Vos, 2016-03-10 Mental, neurological, and substance use disorders are common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies. Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. This evidence-base can help policy makers in resource-constrained settings as they prioritize programs and interventions to address these disorders.

Advanced Acupuncture Research: From Bench to Bedside Ying Xia, 2022-07-26 Written by over

seventy scientists and clinicians worldwide from China, USA, Germany, Canada, Japan and other countries, this monograph, with nearly 450 figures and tables, covers a wide range of advanced progress in acupuncture research, from experimental research to clinical applications. In addition to exploring the histopathological basis for acupuncture and mathematical simulation of acupoint response to stimulation, initiation and transduction of acupuncture signals and cellular mechanisms during acupuncture effects as well as chemical and physical characteristics of moxibustion on acupoints are broadly discussed. The topics also include novel data on acupuncture effect with advanced imaging techniques, a unique understanding of meridian-viscera correlation, specific interactions between meridians and neurosensory organs within the system of homeostatic regulation and the acupuncture-induced influences on autonomic function. Several chapters introduce specific approaches with dry needling, silver needling and stainless needling for certain diseases, such as myofascitis, supportive care for breast cancer and chemotherapy-induced peripheral neuropathy as well as perioperative care of surgical patients. Moreover, this book discusses recent research on acupuncture therapy and potential mechanisms for a number of severe and refractory neurological disorders, including hyperactivity of hypothalamic-pituitary-adrenal axis, orofacial pain, chronic pain, itch, multiple sclerosis, autism spectrum disorders, cerebral palsy, depressive disorders, Alzheimer's disease and ischemic brain injury. The vast amount of information offered in this book provides a comprehensive perspective on advanced acupuncture research to not only acupuncturists, but also to neuroscientists, neurologists, and other clinicians. For medical students and graduate and undergraduate students majoring in biology, physiology and neuroscience, this book offers an advanced course in learning about the mechanism-driven advances in alternative and complementary medicine.

A Manual of Neuro-anatomical Acupuncture: Neurological disorders Joseph Y. Wong,1999

The Tao of Trauma Alaine D. Duncan,Kathy L. Kain,2019-01-08 Explains trauma using a combination of the Five Elements (from Traditional Chinese Medicine) and a touch perspective; for practitioners of a variety of modalities, including acupuncturists, somatic therapists, massage therapists, and mental health providers. Combining Eastern and Western trauma physiology, clinician-educators Alaine Duncan and Kathy Kain introduce a new map for acupuncturists, medical practitioners, mental health providers, and body-oriented clinicians to help restore balance in their patients. Using concepts from Acupuncture and Asian Medicine (AAM), alongside descriptions of the threat response from Western bio-behavioral science, they describe common physical symptoms, emotional presentations, and paths for healing for five survivor types detailed by the authors and correlated to the Five Elements of AAM. This ancient/modern integrative lens illuminates the diverse manifestations of traumatic stress in its survivors--chronic pain, autoimmune illness, insomnia, metabolic problems, and mental health disorders--and brings new hope to survivors of trauma and those who treat them.
