PC Safety 101 Michael Jason, 2021 As a successful entrepreneur you need to communicate all day, every day, with your customers, suppliers, partners, employees, and others. You need to keep records. You need to have reliable access to email and the internet. Nasty little software programs are out there which will slow, snarl or even stop your computer and your Internet connection. Some of them will track your activity, and some will even mine your personal or business information. This malicious software - or "malware" for short - is an every day problem that can, if left unchecked, render your computer worthless, harm your business, and potentially even harm your life. Have you noticed mysterious slowdowns in your computer's performance, even when you only have one or two programs (apparently) running? Have you noticed a lag in your web surfing, even though you have a very fast broadband connection? Almost certainly if you have, it's because spyware or adware is taxing your system, slowing things down for you while sending information you may not want sent, to places you almost certainly don't want it sent to. The bad news is that this stuff is everywhere now, including coming from sites of reputable companies that you have chosen to do business with. There are probably dozens, maybe even hundreds, of pieces of bad tracking software and viruses lurking on your computer right now. The better news is that as in real life medicine, an ounce of prevention beats a pound of cure... And the best news is that you can malware-proof your computer for very little money and without any special computer knowledge! This report is all about understanding malware, its forms, purposes, and effects; and even more importantly the various ways you can employ to stop it, find it, and destroy it. The answer to minimizing the presence of and eliminating damage from malware is a combination of settings, software, and surfing choices. While we do suggest you have a firewall, a firewall is really designed to stop other kinds of problems, like malicious remote access issues (people "breaking into" your system) and like wireless security is really a different category from malware. In this report we're going to focus on malware specifically. First let's take a quick look at the three major categories of malware. In the biggest categorical sense, viruses and spyware represent very different basic issues.

Digital Umbrella John Bennett, Jr., 2004-09 Is your privacy at stake? Privacy violations are everywhere. How many Americans understand that the discount card at the drug store can track their orders, that the website they visited on their computer just installed a program to log their keystrokes, or that their workplace is monitoring their each and every move? Privacy violations can, and will, result in identity theft, credit card fraud, employer dismissal, and loss of productivity. If you don't know how to protect yourself, you run the risk of losing everything you ever worked for. If you think you're immune just because you don't own or use a computer, think again. Technology tracks everything and affects everyone, young and old, computer user or not. The Digital Umbrella exposes the risks to your personal privacy with real-life examples and proven methods to protect yourself. Learn how corporate America, the US government, and even your employer are destroying any expectation of privacy in this country. This informative guide to personal privacy includes in-depth analyses and tutorials on

protection as well as ways to combat and prevent electronic fraud. Anyone can, and will, understand the topics covered in this book. Don't wait until it's too late, learn about the risks today!

Combating Spyware in the Enterprise Paul Piccard, 2006-08-04 Combating Spyware in the Enterprise is the first book published on defending enterprise networks from increasingly sophisticated and malicious spyware. Combating Spyware in the Enterprise begins by examining the various types of insidious spyware and adware currently propagating across the internet and infiltrating enterprise networks. This section closely examines Spyware's ongoing transformation from nuisance to malicious, sophisticated attack vector. Next, the book uncovers spyware's intricate economy and network of malicious hackers and criminals. Forensic investigations presented in this section of the book reveal how increasingly sophisticated spyware can compromise enterprise networks via trojans, keystroke loggers, system monitoring, distributed denial of service attacks, backdoors, viruses, and worms. After close examination of these attack vectors, the book begins to detail both manual and automated techniques for scanning your network for the presence of spyware, and customizing your IDS and IPS to detect spyware. From here, the book goes on to detail how to prevent spyware from being initially installed to mitigating the damage inflicted by spyware should your network become infected. Techniques discussed in this section include slowing the exposure rate; web filtering; using FireFox, MacOSX, or Linux; patching and updating, machine restrictions, shielding, deploying anti-spyware, and re-imaging. The book concludes with an analysis of the future of spyware and what the security community must accomplish to win the war against spyware. * A recent survey published by Information Security Magazine stated that combating spyware was the #2 priority for security professionals in 2005 * Despite the high priority placed on combating spyware by security professionals, there are no other books published or announced that address this market * Author Paul Piccard is Director of Research for Webroot, which is a market leader for pure-play anti-spyware vendors
