Professional Financial Computing Using Excel and VBA Donny C. F. Lai,Humphrey K. K. Tung,Michael C. S. Wong,2011-12-28 Professional Financial Computing Using Excel and VBA is an admirable exposition that bridges the theoretical underpinnings of financial engineering and its application which usually appears as a black-box software application. The book opens the black-box and reveals the architecture of risk-modeling and financial engineering based on industry-standard stochastic models by utilizing Excel and VBA functionality to create a robust and practical modeling tool-kit. Financial engineering professionals who purchase this book will have a jumpstart advantage for their customized financial engineering and modeling needs. Dr. Cameron Wicentowich Vice President, Treasury Analytics Canadian Imperial Bank of Commerce (CIBC) Spreadsheet modeling for finance has become a standard course in the curriculum of many Quantitative Finance programs since the Excel-based Visual Basic programming is now widely used in constructing optimal portfolios, pricing structured products and managing risks. Professional Financial Computing Using Excel and VBA is written by a unique team of finance, physics and computer academics and practitioners. It is a good reference for those who are studying for a Masters degree in Financial Engineering and Risk Management. It can also be useful for financial engineers to jump-start a project on designing structured products, modeling interest term structure or credit risks. Dr. Jin Zhang Director of Master of Finance Program and Associate Professor The University of Hong Kong Excel has been one of the most powerful tools for financial planning and computing over the last few years. Most users utilize a

fraction of its capabilities. One of the reasons is the limited availability of books that cover the advanced features of Excel for Finance. Professional Financial Computing Using Excel and VBA goes the extra mile and deals with the Excel tools many professionals call for. This book is a must for professionals or students dealing with financial engineering, financial risk management, computational finance or mathematical finance. I loved the way the authors covered the material using real life, hands-on examples. Dr. Isaac Gottlieb Temple University Author, Next Generation Excel: Modeling in Excel for Analysts and MBAs

Performance, Memory, and Processions in Ancient Rome Jacob A. Latham,2016-08-16 The pompa circensis, the procession which preceded the chariot races in the arena, was both a prominent political pageant and a hallowed religious ritual. Traversing a landscape of memory, the procession wove together spaces and institutions, monuments and performers, gods and humans into an image of the city, whose contours shifted as Rome changed. In the late Republic, the parade produced an image of Rome as the senate and the people with their gods - a deeply traditional symbol of the city which was transformed during the empire when an imperial image was built on top of the republican one. In late antiquity, the procession fashioned a multiplicity of Romes: imperial, traditional, and Christian. In this book, Jacob A. Latham explores the webs of symbolic meanings in the play between performance and itinerary, tracing the transformations of the circus procession from the late Republic to late antiquity.
