Exosomes, Stem Cells and MicroRNA Karl L. Mettinger, Pranela Rameshwar, Vinod Kumar, 2018-05-12 This volume provides insight into the pivotal roles of stem cells, exosomes and other microvesicles in biofunction and molecular mechanisms and their therapeutic potential in translational nanomedicine. It further highlights evidence from recent studies as to how stem cell derived exosomes and microRNAs may restore and maintain tissue homeostasis, enable cells to recover critical cellular functions and begin repair regeneration. These early studies in animal models of aging also show evidence of improved immune, cardiovascular and cognitive functions as well as improved health span and life span. The use of exosomes from body fluids to define specific biomarkers for various tumors may also clear the path to patient-targeted treatments by developing exosome-derived microRNA based cancer therapeutics. It is essential reading

for graduate students, research fellow and biomedical researchers in academia or the pharmaceutical or biotech industries.

Dementias S. Govoni, C.L. Bolis, M. Trabucchi, 2012-12-06 To a certain extent the dementias have been forgotten diseases until just recently when they were brought to the attention of the general public and health authorities as a result of the increasing number of cases in the aging population, especially among famous people, and because of the efforts of private foundations. The goals of the present volume are to present the dementias to health practitioners, to provide some basic information on their epidemiology and biological basis and to discuss the diagnostic and clinical problems that physicians and institutions face when caring for demented patients. This book explores the various types of dementias and is not limited to Alzheimer's disease although, as expected, more information is available and presented on this pathology. On the other hand, a few fundamental questions on dementia can only be answered through a comparison of the various forms. Examples of such questions are the following: Is the loss of cerebral tissue sufficient to cause dementia? Are there thresholds or is there a continuous progression toward the

irreversible development of dementia? Are there common pathways in the dementing process? Are there common risk factors?

Comparative analysis allows the common and distinctive patterns of the various dementias to be defined, ultimately leading to more focused therapeutic interventions.

Feasting Wild Gina Rae La Cerva, 2020-05-26 A New York Times Book Review Summer Reading Selection “Delves into not only what we eat around the world, but what we once ate and what we have lost since then.”—The New York Times Book Review Two centuries ago, nearly half the North American diet was foraged, hunted, or caught in the wild. Today, so-called “wild foods” are becoming expensive luxuries, served to the wealthy in top restaurants. Meanwhile, people who depend on wild foods for survival and sustenance find their lives forever changed as new markets and roads invade the world’s last untamed landscapes. In *Feasting Wild*, geographer and anthropologist Gina Rae La Cerva embarks on a global culinary adventure to trace our relationship to wild foods. Throughout her travels, La Cerva reflects on how colonialism and the extinction crisis have impacted wild spaces, and reveals what we sacrifice when we domesticate our foods—including biodiversity, Indigenous and women’s knowledge, a vital connection to nature, and delicious flavors. In the Democratic Republic of the Congo, La Cerva investigates the violent “bush meat” trade, tracking elicited delicacies from the rainforests of the Congo Basin to the dinner tables of Europe. In a Danish cemetery, she forages for wild onions with the esteemed staff of Noma. In Sweden—after saying goodbye to a man known only as The Hunter—La Cerva smuggles freshly-caught game meat home to New York in her suitcase, for a feast of “heartbreak moose.” Thoughtful, ambitious, and wide-ranging, *Feasting Wild* challenges

us to take a closer look at the way we eat today, and introduces an exciting new voice in food journalism. “A memorable, genre-defying work that blends anthropology and adventure.”—Elizabeth Kolbert, New York Times-bestselling author of *The Sixth Extinction* “A food book with a truly original take.”—Mark Kurlansky, New York Times bestselling author of *Salt: A World History* “An intense and illuminating travelogue... offer[ing] a corrective to the patriarchal white gaze promoted by globetrotting eaters like Anthony Bourdain and Andrew Zimmern. *La Cerva* combines environmental history with feminist memoir to craft a narrative that's more in tune with recent works by Robin Wall Kimmerer, Helen Macdonald and Elizabeth Rush.”—The Wall Street Journal

The Lives of LGBT Older Adults Nancy A. Orel, Christine A. Fruhauf, 2014 Lesbian, gay, bisexual, and transgendered (LGBT) older adults have unique and varying physical and mental health needs.

Yet their experiences have often been ignored in gerontological and LGBT studies. In this important and timely volume, Orel and Fruhauf bring together crucial research from leading experts in the field to shed light on the unique challenges facing this oft-overlooked but growing population. This book uses a life course perspective to investigate how LGBT older adults have been shaped by social stigma and systematic discrimination. Although many of their experiences are similar to those of younger LGBT individuals, LGBT elders grew up in a particularly oppressive time, which continues to impact their well-being. However, these individuals have also developed coping mechanisms to adapt to stigma, discrimination, and the challenges of aging. Thus, the book explores not only the challenges and needs of this population but also their strengths and resilience. The intersection of cultural factors and personal attributes is highlighted.

IBM Software for SAP Solutions Yaro Dunchych,Peter Bahrs,Khirallah Birkler,Bernd Eberhardt,Navneet Goyal,James Hunter,Derek Jennings,Joe Kaczmarek,Michel Laaroussi,Michael Love,Stefan Momma,Nick Norris,Martin Oberhofer,Manfred Oevers,Paul Pacholski,Andrew Stalnecker,Jörg Stolzenberg,Pierre Valiquette,IBM Redbooks,2015-09-29 SAP is a market leader in enterprise business application software. SAP solutions provide a rich set of composable application modules, and configurable functional capabilities that are expected from a comprehensive enterprise business application software suite. In most cases, companies that adopt SAP software remain heterogeneous enterprises running both SAP and non-SAP systems to support their business processes. Regardless of the specific scenario, in heterogeneous enterprises most SAP

implementations must be integrated with a variety of non-SAP enterprise systems: Portals Messaging infrastructure Business process management (BPM) tools Enterprise Content Management (ECM) methods and tools Business analytics (BA) and business intelligence (BI) technologies Security Systems of record Systems of engagement

The tooling included with SAP software addresses many needs for creating SAP-centric environments. However, the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance. When SAP software is used in a large, heterogeneous enterprise environment, SAP clients face the dilemma of selecting the correct set of tools and platforms to implement SAP functionality, and to integrate the SAP solutions with non-SAP systems. This IBM® Redbooks® publication explains the value of integrating IBM software with SAP solutions. It describes how to enhance and extend pre-built capabilities in SAP software with best-in-class IBM enterprise software, enabling clients to maximize return on investment (ROI) in their SAP investment and achieve a balanced enterprise architecture approach. This book describes IBM Reference Architecture for SAP, a prescriptive blueprint for using IBM software in SAP solutions. The reference architecture is focused on defining the use of IBM software with SAP, and is not intended to address the internal aspects of SAP components. The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy, efficiency, and balance. The majority of the most important architectural domain topics, such as integration, process optimization, master data management, mobile access, Enterprise Content Management, business intelligence, DevOps, security, systems

monitoring, and so on, are covered in the book. However, there are several other architectural domains which are not included in the book. This is not to imply that these other architectural domains are not important or are less important, or that IBM does not offer a solution to address them. It is only reflective of time constraints, available resources, and the complexity of assembling a book on an extremely broad topic. Although more content could have been added, the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains, and it is hoped that this book provides great value to those reading it. This IBM Redbooks publication is targeted to the following audiences: Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large-scale SAP projects. IT architects and consultants integrating IBM technology with SAP solutions.

Stem Cells in Aesthetic Procedures Melvin A. Shiffman,Alberto Di Giuseppe,Franco Bassetto,2014-07-21 Interest in the use of stem cells in aesthetic procedures has been increasing rapidly, reflecting the widespread acknowledgment of the tremendous potential of stem cell fat transfer. This is, however, the first book to be devoted entirely to the subject. The book opens by reviewing the history of the development of pluripotent stem cells and the results of research into the biochemistry and physiology of stem cells. Adipose tissue anatomy and survival are discussed and the wide range of aesthetic procedures involving stem cell fat transfer are then described in detail. These procedures relate to the face, breast, buttocks, legs, hands, penis and

Poland syndrome. In addition, potential risks and complications are identified. The book has been written by leading experts and will be an invaluable source of information for students, beginners and experienced surgeons in a range of specialties.
