Tu sais, mon vieux Jean-Pierre John Willis,2017-04-28 *Tu sais, mon vieux Jean-Pierre* is inspired by the work of archaeologist Jean-Pierre Chrestien (1949–2008), who worked hand-in-glove with a generation of researchers in helping to unearth unexpected and always interesting aspects of New France. Contributions focus first upon the door to New France in the Gulf of St. Lawrence, Newfoundland and Acadia. A second set of essays move further up the St. Lawrence and into the heartland of the continent. The final section examines aspects of Canadian culture: popular art, religion and communication. The essays share a curiosity for material culture, a careful regard for detail and nuance that forms the grain of New France studies, and sensitivity to the overall context that is part and parcel of how history proceeds on the local or regional scale. Happily we can now dispense with old-fashioned and facile generalizations about the allegedly absent bourgeoisie, the purportedly deficient commercial ethic of the habitants and the so-called underlying military character of the colony and get down the business of understanding real people and their possessions in context.

Spectral Data for Highly Ionized Atoms: Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Kr, and Mo Toshizo Shirai,2000-06-22 These comprehensive spectroscopic data tables for the spectra of highly ionized heavy atoms provide a valuable resource for researchers who need detailed spectroscopic information on energy levels, wavelengths, ionization energies, and oscillator strengths. Critically evaluated data for these spectroscopic quantities, both observed and calculated, are tabulated for the elements Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Kr, and Mo. The tables include data for all stages of ionization from Ca-like through H-like spectra, except for Kr and Mo, which start at Ge-like and Rb-like, respectively. Typically, several hundred transitions are covered for each spectrum. The tables are arranged in order of decreasing wavelengths, and lines belonging to the same multiplet are grouped together. Forbidden lines, i.e., mainly magnetic dipole (M1) and electric quadrupole (E2) transitions are also included and are identified as such. A unified finding list, in which lines are ordered according to wavelengths, contains all the tabulated transitions. Short reviews on the line identifications and wavelength measurements are given for each stage of ionization. The general introduction contains a discussion on the method of evaluation and some background on the compilations.
