Media Capture Anya Schiffrin,2021-06-22 Who controls the media today? There are many media systems across the globe that claim to be free yet whose independence has been eroded. As demagogues rise, independent voices have been squeezed out. Corporate-owned media companies that act in the service of power increasingly exercise soft censorship. Tech giants such as Facebook and Google have dramatically changed how people access information, with consequences that are only beginning to be felt. This book features pathbreaking analysis from journalists and academics of the changing nature and peril of media capture—how formerly independent institutions fall under the sway of governments, plutocrats, and corporations. Contributors including Emily Bell, Felix Salmon, Joshua Marshall, Joel Simon, and Nikki Usher analyze diverse cases of media capture worldwide—from the United Kingdom to Turkey to India and beyond—many drawn from firsthand experience. They examine the role played by new media companies and funders, showing how the confluence of the growth of big tech and falling revenues for legacy media has led to new forms of control. Contributions also shed light on how the rise of right-wing populists has catalyzed the crisis of global media. They also chart a way forward, exploring the growing need for a policy response and sustainable models for public-interest investigative journalism. Providing valuable insight into today's urgent threats to media independence, Media Capture is essential reading for anyone concerned with defending press freedom in the digital age.

Active Galactic Nuclei Volker Beckmann,Chris Shrader,2013-08-29 This AGN textbook includes phenomena based on new results in the X-Ray domain from new telescopes such as Chandra and XMM Newton not mentioned in any other book. Furthermore, it considers also the Fermi Gamma Ray Space Telescope with its revolutionary advances of unprecedented sensitivity, field of view and all-sky monitoring. Those and other new developments as well as simulations of AGN merging events and formations, enabled through latest super-computing capabilities. The book gives an overview on the current knowledge of the Active Galacitc Nuclei phenomenon. The spectral energy distribution will be discussed, pointing out what can be observed in different wavebands and with different physical models. Furthermore, the authors discuss the AGN with respect to its environment, host galaxy, feedback in galaxy clusters, etc. and finally the cosmological evolution of the AGN phenomenon.

Nanocasting An-Hui Lu,Dongyuan Zhao,Ying Wan,2010 Nanostructured materials with tailored properties are regarded as a fundamental element in the development of future science and technology. Research is still ongoing into the nanosized construction elements required to create functional solids. The recently developed technique, nanocasting, has great advantage over others in terms of the synthesis of special nanostructured materials

by the careful choice of suitable elements and nanoengineering steps. This new book summarizes the recent developments in nanocasting, including the principles of nanocasting, syntheses of novel nanostructured materials, characterization methods, detailed synthetic recipes and further possible development in this area. The book focuses on the synthesis of porous solids from the viewpoint of methodology and introduces the science of nanocasting from fundamental principles to their use in synthesis of various materials. It starts by outlining the principles of nanocasting, requirements to the templates and precursors and the tools needed to probe matter at the nanoscale level. It describes how to synthesize nano structured porous solids with defined characteristics and finally discusses the functionalization and application of porous solids. Special attention is given to new developments in this field and future perspectives. A useful appendix covering the detailed synthetic recipes of various templates including porous silica, porous carbon and colloidal spheres is included which will be invaluable to researchers wanting to follow and reproduce nanocast materials. Topics covered in the book include: * inorganic chemistry * organic chemistry * solution chemistry * sol-gel and interface science * acid-base equilibria * electrochemistry * biochemistry * confined synthesis The book gives readers not only an overview of nanocasting technology, but also sufficient information and knowledge for those wanting to prepare various nanostructured materials without needing to search the available literature.

Global Politics Ben Whitham,Andrew Heywood,2023-03-31 In turbulent global times, your study of this subject is increasingly necessary and urgent. Featuring a new chapter on critical theories, and revised to take a less Eurocentric approach to concepts and case studies, this new edition allows you to tackle global politics' important concepts, debates and problems: -How can theories help us to understand the politics of a global pandemic? -Do we live in a 'post-truth' world of 'fake news' and disinformation? -Does international aid work? -Does the United States remain a global hegemon? -What is the Anthropocene and how does it shape global politics? -Are global politics constrained by a 'North-South' divide? -What are the possible futures of global politics – and the politics of outer space? Delving into topics as diverse as anarchy, intersectionality, Confucianism, and neoconservatism, boxed features give you confidence in political analysis: -Focus on: learn more about the global colour line or the tragedy of the commons -Key figures: discuss the ideas of Hans Morgenthau, Frantz Fanon or bell hooks -Debating: argue whether the United Nations are obsolete, or whether nuclear weapons promote peace -Global politics in action: apply your learning to the migration crisis in Europe or the Arab Spring -Approaches to: consider human rights or the Covid-19 pandemic from the perspective of realist, liberal, postcolonial, Marxist, feminist, constructivist and post-structuralist theory -Global actors: understand the significance of Black Lives Matter, Amnesty International or the International Monetary Fund. Spanning the development of global politics, from the early origins of globalization through to the return of multipolarity in the twenty-first century, this is an essential text for undergraduates studying global politics and international relations.

The Commercialization of News in the Nineteenth Century Gerald J. Baldasty,1992-11-15 The Commercialization of News in the Nineteenth Century traces the major transformation of newspapers from a politically based press to a commercially based press in the nineteenth century. Gerald J. Baldasty argues that broad changes in American society, the national economy, and the newspaper industry brought about this dramatic shift. Increasingly in the nineteenth century, news became a commodity valued more for its profitablility than for its role in informing or persuading the public on political issues. Newspapers started out as highly partisan adjuncts of political parties. As advertisers replaced political parties as the chief financial support of the press, they influenced newspapers in directing their content toward consumers, especially women. The results were recipes, fiction, contests, and features on everything from sports to fashion alongside more standard news about politics. Baldasty makes use of nineteenth-century materials—newspapers from throughout the era, manuscript letters from journalists and politicians, journalism and advertising trade publications, government reports—to document the changing role of the press during the period. He identifies three important phases: the partisan newspapers of the Jacksonian era (1825-1835), the transition of the press in the middle of the century, and the influence of commercialization of the news in the last two decades of the century.
