Affinity Sarah Waters,2002-01-08 “Gothic tale, psychological study, puzzle narrative...This is gripping, astute fiction that feeds the mind and senses.”—The Seattle Times An upper-class woman recovering from a suicide attempt, Margaret Prior has begun visiting the women’s ward of Millbank prison, Victorian London’s grimmest jail, as part of her rehabilitative charity work. Amongst Millbank’s murderers and common thieves, Margaret finds herself increasingly fascinated by on apparently innocent inmate, the enigmatic spiritualist Selina Dawes. Selina was imprisoned after a séance she was conducting went horribly awry, leaving an elderly matron dead and a young woman deeply disturbed. Although initially skeptical of Selina’s gifts, Margaret is soon drawn into a twilight world of ghosts and shadows, unruly spirits and unseemly passions, until she is at last driven to concoct a desperate plot to secure Selina’s freedom, and her own. As in her noteworthy debut, *Tipping the Velvet*, Sarah Waters brilliantly evokes the sights and smells of a moody and beguiling nineteenth-century London, and proves herself yet again a storyteller, in the words of the New York Times Book Review, of startling power.

Affinity Modification Of Biopolymers Dmitri G Knorre,2018-01-18 The goal of this book is to give a systematic description of the main principles of affinity modification and applications, consideration of possibilities, and restrictions of the method. Modification within specific complexes is a special case of chemical modification which is widely used in the nonaddressed version in biochemistry and related areas. Therefore, we have included in the first introductory paper chapter of the book general considerations of chemical modifications of biopolymers and the application of biopolymers.

States in Disguise Belgin San-Akca,2016 There is a long history of state governments providing support to nonstate armed groups fighting battles in other countries. Examples include Syria's aid to Hamas, Ecuador's support for FARC, and Libya's donation of arms to the IRA. What motivates states to do this? And why would rebel groups align themselves with these states? In *States in Disguise*, Belgin San-Akca builds a rigorous theoretical framework within which to study the complex and fluid network of relationships between states and rebel groups, including ethnic and religious insurgents, revolutionary groups, and terrorists. She proves that patterns of alliances between armed rebels and modern states are hardly coincidental, but the result of systematic and strategic choices made by both states and rebel groups. San-Akca demonstrates that these alliances are the result of shared conflictual, material and ideational interests, and her theory shows how to understand these ties via the domestic and international environment. Drawing from an original data set of 455 groups, their target states, and supporters over a span of more than sixty years, she explains that states are most likely to support rebel groups when they are confronted with internal and external threats simultaneously, while rebels select strong states and democracies when seeking outside support. She also shows that states and rebels look to align with one another when they share ethnic, religious and ideological ties. Through its broad chronological sweep, *States in Disguise* reveals how and why the phenomenon of state and rebel group alliances has evolved over time.

Transactions on High-Performance Embedded Architectures and Compilers III Per Stenström,2011-02-23 Transactions on HiPEAC aims at the timely dissemination of research contributions in computer architecture and compilation methods for high-performance embedded computer systems. Recognizing the convergence of embedded and general-purpose computer systems, this journal publishes original research on systems targeted at specific computing tasks as well as systems with broad application bases. The scope of the journal therefore covers all aspects of computer architecture, code generation and compiler optimization methods of interest to researchers and practitioners designing future embedded systems. This third issue contains 14 papers carefully reviewed and selected out of numerous submissions and is divided into four sections. The first section contains the top four papers from the Third International Conference on High-Performance Embedded Architectures and Compilers, HiPEAC 2008, held in Göteborg, Sweden, in January 2008. The second section consists of four papers from the 8th MEDEA Workshop held in conjunction with PACT 2007 in Brasov, Romania, in September 2007. The third section contains two regular papers and the fourth section provides a snapshot from the First Workshop on Programmability Issues for Multicore Computers, MULTIPROG, held in conjunction with HiPEAC 2008.

Affinity Electrophoresis Jan Breborowicz,2018-01-18 This book discusses the topic of affinity electrophoresis (AFF-EP), which has become a useful tool for studies of biomolecular interactions. The book will discuss AFF-EP as an analytical method which has been used successfully for the diagnosis, differentiation, and monitoring of patients with various diseases. The book will also discuss other uses for the AFF-EP method.

Affinity Chromatography Pascal Bailon,2008-02-04 Affinity chromatography, with its exquisite specificity, is based upon molecular recognition. It is a powerful tool for the purification of biomolecules. In recent years, numerous new applications and modified techniques have been derived from gro- specific interactions and biological recognition principles. An up-to-date review of the past, current, and future applications of affinity chromatography has been presented in the introductory chapter by Meir Wilchek and Irwin Chaiken. Though many of these new applications and techniques are well documented in the literature, it is often difficult to find methods that are written with the intent of helping new practitioners of affinity chromatography. This volume on Affinity Chromatography: Methods and Protocols is intended for the novice, as well as for - perts in the field. The protocols are written by experts who have developed and/or successfully employed these methods in their laboratories. Each chapter describes a specific technique, and since the book is intended to help the beginner, each technique is described simply and clearly, making sure that all relevant steps are included, assuming no previous knowledge. Each chapter contains an introduction describing the principles involved, followed by a Materials and Methods section, which lays the groundwork for the reader to conduct experiments step-by-step, in an orderly fashion. The following Notes section, which describes many of the problems that can occur, makes suggestions for overcoming them, and provides alternate procedures. These are precisely the sort of important, practical details that never seem to appear in the published literature.

Novel Calcium-Binding Proteins Claus W. Heizmann,2012-12-06 A wide variety of hormones, neurotransmitters and growth factors exert their cellular effects by reacting first with membrane receptors resulting in an increase of intracellular calcium and the cellular response. The calcium signal in the cell is mediated by the high-affinity calcium binding proteins (characterized by the EF-hand structural element), and by the calcium and phospholipid dependent proteins. Many of these have been discovered most recently. Their purification, distribution, protein and gene structures as well as their physiological roles are discussed. The book is of interest to biochemists and molecular biologists as well as to clinicians and the pharmaceutical industry who can apply the results in this field.
