Homemade Organic Sunscreen Brenda Fry, 2016-07-12 Getting Your FREE Bonus Download this book, read it to the end and see BONUS: Your FREE Gift chapter after the conclusion. Homemade Organic Sunscreen: (FREE Bonus Included) 20 Natural Non-Toxic Sun Lotions Recipes + After-Sun Moisturizer and Tan-Activator For decades, doctors assured us that we should avoid exposure to the sun. The less, the better - this was their motto. It seems, however, that this is not quite true because the sunlight is vital to humans. Sun is the source of life. If it wasn't for it, the world we know would not even exist. Still, because of dangers of skin cancer, in the last couple of decades people started avoiding sunbathing. However, latest medicinal discoveries have shown that we risk more when we avoid the sun exposure, then when letting it shine upon us. Of course, temperance is the key. Recent studies conducted in the US have shown that there are more people who get affected by cancer due to lack of sun exposure, then those who get skin cancer from sunbathing. Properly dosed sun exposure not only protects against certain cancer types, but also from various other diseases. It's been a long fact for many decades that people living in warmer areas suffer less from health issues like diabetes, high blood pressure and rheumatism. Doctors have long speculated what might be the reason, but a recent research has revealed the truth. The text is divided into eight parts. Part one and two address the nutrient requirements and special nutrition-related issues for people across all stages of the lifespan—from pregnancy and infancy through the adolescent years to the older adult years. Part three summarizes the role of nutrition in the prevention and management of chronic conditions frequently seen in clinical practice, including obesity, diabetes, bone disorders, coronary heart disease, hypertension, and cancer. Part four describes different dietary patterns (the Mediterranean diet, the DASH diet, the vegetarian diet, and the ketogenic diet). Part five describes nutrition challenges specific to surgery and several different acute diseases and disorders (gastrointestinal disorders, food allergy and intolerance, diseases of the liver and pancreas, kidney disease, eating disorders, bariatric surgery, sarcopenia, and drug interactions with food). Part six looks at different aspects of the diet (coffee, tea, dietary fat, dietary sugars, energy drinks, alcohol, dietary fiber, vitamins, minerals, and the gut microbiome). Part seven examines a range of factors that influence dietary health decisions (creating nutritional behavior change, methods for assessing nutritional status, Dietary Reference Intakes, an overview of the diet and food guides, food labels, and sources

of nutrients). Finally, part eight looks at dietary supplements (including the problem of dishonest marketing) and false and misleading information in the area of nutrition. The growing nutritional impact of COVID-19 is discussed throughout the book where appropriate. Nutrition Guide for Physicians and Related Healthcare Professions Third Edition serves as a comprehensive guide that is organized by age/lifespan, nutrition therapy in relation to chronic disease and COVID, diet and its role in prevention, dietary requirements and recommendations, and influencing health decisions for the patient. It is a valuable resource of practical and easy-to-access information on nutrition for physicians, nurses, pharmacists, and others in their daily practice.
