*Smooth muscle and stromal tumors and prevention of inadequate surgery* Günter Köhler,Matthias Evert,Katja Evert,Marek Zygmunt,2016-11-21 The subject matter of volume 1 of the 2-volumes-handbook focusses on leiomyosarcoma, low-grade and high-grade endometrial sarcoma and undifferentiated uterine sarcoma of the whole female genitalia. A separate extensive chapter is devoted to the variants of leiomyoma (angio-, lipo-, cotyledonoid, cellular, mitotically active, epithelioid and myxoid leiomyoma, leiomyoma with bizarre nuclei), atypical smooth muscle tumors (smooth muscle tumors with uncertain malignant potential), and disseminated peritoneal leiomyomatosis, benign metastasizing leiomyoma, and intravenous leiomyomatosis. Furthermore, endometrial stromal tumors – endometrial stromal nodules, endometrial stromal tumor with sex cord-like elements (ESTSCLE), uterine tumor resembling ovarian sex-cord tumor (UTROSCT) - and similar tumors are described in detail. The book provides a description at length of the epidemiology, etiology, pathological anatomy, prognosis, diagnosis, differential diagnosis, imaging and comprehensive therapy of each primary, relapsed, and metastasized tumor including surgery, chemo-, hormone- and radio- and targeted therapy. Another chapter is devoted to the prevention of subjecting sarcomas to inadequate surgical therapeutic measures under the assumed diagnosis of leiomyoma, and includes a diagnostic-therapeutic flowchart with a diagnostic score. The book aims to identify and provide diagnostic and therapeutic guidance. The listed tumor entities also constitute a particular diagnostic challenge for pathologists that contains numerous pitfalls and difficulties. This book, therefore, addresses gynecologists and pathologists in both clinical and private practice, but also surgeons and hemato-oncologists.

Histological Typing of Ovarian Tumours Robert Edward Scully,L.H. Sobin,1999-04-23 Although the histological typing of ovarian tumours is the focus of this volume, other aspects of investigation of a specimen of ovarian tumour are also important. Some of these aspects are mentioned in the text or illustrated. They include tumour grading, which is important prognostically and therapeutically for certain types of ovarian tumour, quantification of components in mixed tumours and evaluation of the stroma of certain tumours that are associated with endocrine function. Grading methodologies have varied from one tumour type to another and from one group of investigators to another for the same type of tumour. Because a standard internationally recognized grading methodology has not been established, no specific guidance is presented in this volume. Nevertheless, grading by any generally acceptable method should be incorporated in the diagnosis whenever appropriate. The clinical and pathological classification of the extent of tumour growth (staging) should be taken into account for the purposes of treatment and prognosis. The TNIV1/FIGO system is therefore included (p. 45). On the other hand, there are fears and misconceptions. I have heard many doctors say I have never been sued for a section I did, but I have been sued for the section I did not do. The fear of not having performed a section in my opinion is real, although difficult to prove, and until the public can be educated that cesarean section delivery cannot eradicate fetal death and damage, this fear will remain and will be responsible for some unnecessary cesarean sections. Bruce Flamm and I hope this book will correct misconceptions that have been responsible for many unnecessary cesarean sections. I am still frequently asked the same old question: What is an ideal cesarean section rate? I still give an answer similar to the 1983 answer, perhaps somewhat modified.

**Waiting for Cancer to Come** Sharlene Hesse-Biber,2014-07-28 Waiting for Cancer to Come tells the stories of women who are struggling with their high risk for cancer. Based on interviews and surveys of dozens of women, this book pieces together the diverse yet interlocking experiences of women who have tested positive for the BRCA 1/2 gene mutations, which indicate a higher risk of developing breast and ovarian cancer. Sharlene Hesse-Biber brings these narratives to light and follows women's journeys from deciding to get screened for BRCA, to learning the test has come back positive, to dealing with their risk. Many women already know the challenges of a family history riddled with cancer and now find themselves with the devastating knowledge of their own genetic risk. Using the voices of the women themselves to describe the under-explored BRCA experience, Waiting for Cancer to Come looks at the varied emotional, social, economic, and psychological factors at play in women's decisions about testing and cancer prevention.

Growth Factors and the Ovary Anne N. Hirshfield,2013-06-29 The First Ovarian Workshop was held in June 1976; its goal was to achieve a collective understanding of current thought on ovarian follicular development and function, and to generate clear definitions of the most important areas to be explored in the future. The Ovarian Workshops quickly became a major biennial event for the community of reproductive biologists and their students studying ovarian function. As a young graduate student, I gave my first scientific presentation at the First Ovarian Workshop and I have attended all but one of the subsequent meetings. The Workshops provided a unique forum for the sharing of ideas with colleagues studying closely related problems. I was therefore especially pleased to have been asked to organize the Seventh Ovarian Workshop and to be given an opportunity to help perpetuate these important meetings. The Seventh Ovarian Workshop was held on the campus of the University of Puget Sound in Tacoma, Washington on July 31 and August 1, 1988. Sero Symposia USA generously financed and coordinated the meeting. I would like to express my particular thanks to Dr. L. Lisa Kern and Dr. James Posillico for their invaluable help prior to, during, and after the meeting. I would also like to thank Mary Benson and her staff at the University of Puget Sound who made us feel at home in every way.

**Impact of BRCA1/2 Testing on Marital Relationships** Sharon Manne,2002 This study examined the impact of genetic testing for breast-ovarian cancer susceptibility on marital relationships and the quality of life of partners, as well as an examination of how partner responses influence participant distress during the testing process. Participants were members of families in which a disease conferring mutation was been identified and their partners of either gender. Interviews of couples were completed by telephone prior to receiving test results, as well as 1-, 6-, and 12-months after test disclosure. Results indicated that participants who received negative results report decreases in IES scores over the six month period after disclosure of test results, while participants notified that they were carriers of the BRCA genes did not show a significant decrease in IES scores over the same time period. Partners did not evidence significant changes in either distress. Participants who rated higher levels of relationship strain associated with the testing process reported significantly more distress. Participants who rated their partners as responding in an unsupportive manner also reported more distress. Results suggested that the psychological impact of genetic testing on spouses was not significant. However, how partners respond plays a key role in how testing participants handle

the genetic testing process.

**Impact of BRCA 1/2 Testing on Marital Relationships** ,1999 The present study is a prospective examination of the impact of genetic testing for breast-ovarian cancer susceptibility on marital relationships and the quality of life of husbands. Participants are women (age 18 and older) who are members of families in which a disease conferring mutation has been identified and their spouses. Interviews of husbands and wives are completed by telephone prior to receiving test results, as well as 1-, 6-, and 12-months after test disclosure. The preliminary data showed that wives (n=49) were more likely to use avoidance, have intrusive thoughts, and experience psychological distress compared to husbands (n=35). Wives also rated higher marital satisfaction. The husbands scored lower at baseline on four of the measures of interest (the presence of intrusive thoughts, general psychological distress, state anxiety, and marital adjustment) than at 1-month follow-up (n=6). The results of the preliminary analysis suggest that husbands may experience less psychological distress than wives at the baseline assessment (pre-mutation disclosure). However, the level of distress may increase for the husbands within one month of learning of the wife's mutation status. Further analysis when more disclosures have been completed will elucidate the association between mutation status outcome and these psychological measures.

**Gain** Richard Powers,2010-03-15 From Pulitzer Prize-winning and New York Times bestselling author of *The Overstory*, Richard Powers's *Gain* braids together two stories on very different scales. In one, Laura Body, divorced mother of two and a real-estate agent in the small town of Lacewood, Illinois, plunges into a new existence when she learns that she has ovarian cancer. In the other, *Clare & Company*, a soap manufacturer begun by three brothers in nineteenth-century Boston, grows over the course of a century and a half into an international consumer products conglomerate based in Laura's hometown. Clare's stunning growth reflects the kaleidoscopic history of America; Laura Body's life is changed forever by Clare. *Gain*'s stunning conclusion reveals the countless invisible connections between the largest enterprises and the smallest lives.

**Footmarks of Innate Immunity in the Ovary and Cytokeratin-Positive Cells as Potential Dendritic Cells** Katharina Spanel-Borowski,2010-11-22 The monograph introduces innate immunity as second authority in the ovary besides the endocrine system. Innate immunity appears to orchestrate follicular atresia, follicle rupture, follicle transformation into a corpus luteum (CL) and CL regression through nonsterile inflammation and tissue repair. The concept is new. It centres on cytokeratin-positive (CK+) cells being recognized as a potential nonlymphoid dendritic cell type (DC). Part I describes morphological aspects of immune privilege starting with active hamster ovary implants into the chicken chorioallantois membrane. Follicular atresia and follicle rupture correspond with mild and moderate tissue damage in ovaries of small rodents and rabbits. Superovulations cause severe tissue damage through intraovarian oocyte release with follicle wall remnants in oedema, rupture of vessel walls and thrombosis. The complement system and neuropeptides might play regulatory roles. Part IIa analyzes intact ovaries (cows, human) for the appearance of CK+ cells. In the foetal ovary, sex cords give rise to CK+ cells in primordial follicles. In the adult ovary, CK+ cells are absent in preantral follicles and reappear in mature and regressing follicles. In the CL of early development, steroidogenic CK+ cells build a peripheral zone in the previous granulosa cell layer, and uniformly distribute in the following stages. A microvessel-associated CK+ cell type is seldom found. Part IIb characterizes the morphology and function of CK+ cells in vitro. Isolated from human preovulatory follicles, the epithelioid CK+ granulosa cell subtype regulates TLR4 and CD14 at 36 h of treatment with oxidized lipoprotein (oxLDL, 150 µg/ml); nonapoptotic cell death and the increase of reactive oxygen species occur. In contrast, the CK-negative (CK-) granulosa cell type regulates the lectin-like oxLDL receptor 1 (LOX-1) and survival autophagy under oxLDL stimulation. Isolated from bovine CL, the epithelioid CK+ cell type 1 is disclosed as microvascular cell type with a single nonmotile cilium. The microvascular CK+ type strongly upregulates intercellular contacts under treatment with interferon-γ (IFN-γ). In the CK- cell type 5 of granulosa cell-like appearance, IFN-γ treatment supports cell proliferation, N-cadherin upregulation, and the dramatic increase in major histocompatibility complex II peptides (MHC II) by 80-fold compared to basal levels. Type 5 could have been conversed from the steroidogenic CK+ cell type. We summarize and conclude: CK+ granulosa cells express functionally active TLR4, which sense danger signals like oxidative stress in preovulatory follicles and trigger inflammatory and immunoregulatory pathways. The final outcome regulates follicle rupture and transformation into CL. Luteolysis could start by danger-sensing through the microvascular CK+ type 1 cells and the DC-like type 5 cells both sensitive to IFN-γ. The future will witness a novel strategy in the therapy of ovarian disorders like anovulations, luteal phase insufficiency, and autoimmune failures.

*Ovarian Cancer* John M. S. Bartlett,2008-02-02 If there is one aspect of current cancer research that represents a major challenge in both novice and experienced researchers, it is the rapid advance in our understanding of the disease. Researchers can be required to switch from analysis of gene expression to kinetics of protein activation, from genetic studies to the analysis of protein function. Cancers are highly complex disease systems and researchers aiming to understand the functioning of cancer systems require access to a wide range of laboratory techniques from a broad range of research disciplines. Increasingly, however, published methods are incomplete or refer back to a series of previous publications each containing only a small part of the complete protocol. The aim of *Ovarian Cancer: Methods and Protocols* is to provide for ovarian cancer researchers in the first instance, a laboratory handbook that will facilitate research into cancer systems by providing a series of expert protocols, with proven efficacy, across a broad range of technical expertise. Thus, there are sections on tumor genetics and cellular signal transduction, as well as sections on apoptosis and RNA analysis. The value of *Ovarian Cancer: Methods and Protocols* to the ovarian cancer researcher will, I trust, be considerably enhanced by (1) the provision of a series of overviews relating to the biology, diagnosis, and treatment of this important neoplasm, and (2) the provision of a series of technical overviews introducing each part that provides an expert review of the applications and pitfalls of the various techniques included.

*Ovarian Cancer: Molecular & Diagnostic Imaging and Treatment Strategies* Heide Schatten,2021-08-02 The present book on Molecular & Diagnostic Imaging and Treatment Strategies of ovarian cancer is one of two companion books with the second one being focused on Cell and Molecular Biology of Ovarian Cancer. Both books include new exciting aspects of ovarian cancer research with chapters written by experts in their respective fields who

contributed their unique expertise in specific ovarian cancer research areas and include cell and molecular details that are important for the specific subtopics. Comprehensive and concise reviews are included of key topics in the field.

**Ovarian Cancer Journeys** Ayala Miron,2004-09-09 All of the research has reinforced that ovarian cancer is not a silent disease as was once thought and as is shown quite eloquently in this collection of stories. The value of this collection of stories is that it helps raise awareness about symptoms, need for patient persistence, and the importance of being treated by a gynecologic oncologist. Barbara A. Goff, MD Professor and Co-Director, Division of Gynecologic Oncology University of Washington School of Medicine Women of ages 17 to 78 join to tell their true stories. Find out about the lessons they have learned along their ovarian cancer journeys; from symptoms to diagnosis, through treatments, and survival. Ovarian cancer facts: Occurs in 1 out of 57 women 89% have symptoms at the early stages of the disease 75% are diagnosed in the late stages of the disease 90% do not have history of ovarian cancer in their family Early detection is critical and can improve survival rate to 90%

The Last Two Years Arthur Marsicano,2006-12-03 As the writer's wife fights advanced ovarian cancer, pancreatitis and possible liver cancer, they turn to friends, family and their very different religious beliefs for strength, support and insight. During a dramatic two-year period their lives intersect with others experiencing tragedy, and they draw strength, inspiration and even joy from all of them-every single one of them. Jean Marsicano's life was threatened by ovarian cancer-known to many as the silent killer-and she was joined by her husband, her Rock, as they focused on fighting the evil which had invaded her body. They counted their blessings, asked if their lives had meaning, and in the face of great adversity, they enjoyed life. Jean survived The Last Two Years thanks to three physicians-Pal and Mitch who supplied support and direction when they needed it most, and Dr. Goodman, a brilliant young physician who delivered Jean's medical care with skill, wisdom and compassion. As The Last Two Years end, they find hope in the face of continuing uncertainty and joy in friends, family and the beaches of South Carolina. And they realize God was There, and will always be there with them.

**Not All Bad Comes to Harm You** Janice Mock,2015-07-27 Thousands of people have cancer. Thousands of people are fighting it. Thousands more are living with it. Author Janice Mock is just one of those thousands. But in Not All Bad Comes to Harm You, Mock shares her story to help others find new insight, strength, inspiration, and self-awareness. It all started in February 2011 when fifty-one-year-old Mock discovered a small lump in her neck. She was diagnosed with stage four ovarian cancer, and treatment began. In this memoir, Mock narrates her journey, experiences, and thoughts beginning with a life-threatening cancer diagnosis to recovery and beyond. She discusses details of how she changed her focus from victim to survivor, to pursuing life rather than succumbing to death, and why she thought it was a good idea to freeze her head to forty degrees below zero. Grown from the tiny beginnings of a blog intended to communicate medical updates with family and friends, Not All Bad Comes to Harm You tells Mock's story from the joys and travails of the bumpy cancer road to evolving thoughts about living beyond her illness.
