Adobe Dreamweaver CS5.5 Studio Techniques David Powers,2011-06-13 It's widely predicted that mobile phones and tablets will overtake desktop PCs as the most common Web access devices within the next two or three years. Adobe is responding to this dramatic shift by focusing on new tools to develop websites for multiple platforms with HTML, CSS, and JavaScript in Dreamweaver CS5.5. In particular, Dreamweaver engineers have been working closely with the developers of jQuery, the de-facto standard JavaScript framework, to develop jQuery Mobile. This is a new JavaScript/CSS framework designed to create websites and applications that work consistently in all major mobile platforms, including iPhone, Android, BlackBerry, and Symbian (Nokia). This book explores in depth the integration of jQuery Mobile in Dreamweaver, together with other new features aimed at building websites that work across multiple devices. Using a series of practical examples, the book will show how to optimize an existing website for display in desktops, tablets, and mobile phones, using CSS media queries. Readers will also learn how to create a dedicated mobile site using jQuery Mobile. Although Dreamweaver will generate much of the necessary code automatically, the book will explain the structure of jQuery Mobile websites and web applications, so that developers can go beyond the basics to add custom functionality and design features. The book will also utilize the core jQuery framework, demonstrating how the new jQuery code hinting in Dreamweaver CS5.5 speeds up the development process for experienced developers and acts as a learning aid for those new to jQuery. Readers will learn how to convert a jQuery Mobile web application into a native app (that can be loaded on an iPhone or Android device) using PhoneGap, another open source framework.

Converting Websites Into Native Apps Using PhoneGap Matthew David,2011-08 In this short ebook you will see how you can take your knowledge of HTML5 for mobile devices and convert your optimized Web sites into native applications that run on Android, iPhones, BlackBerry's and more. PhoneGap integrates tightly into the development environment you are working in. The benefit this bring is that you can extend the core codebase in your apps with plugins and extensions. This gives you the opportunity to leverage features such as such as maps, advertising and more. The popularity of PhoneGap has reached the ears of many companies. In particular, Adobe is now including PhoneGap support starting with Dreamweaver CS 5.5. If you do not have Dreamweaver you can now even use a Web Service called PhoneGap Builder that will convert your HTML files into native apps. There simply is no excuse when it comes to creating apps. If you know HTML, then you can build a native application.
