Maintainability of Facilities Yit Lin Chew,2016-08-19 This book focuses on spearheading the integration of maintainability and green facility management right from the design stage. The text introduces the concept of green maintainability, and discusses considerations to maximize the performance by achieving resource and energy efficiency, while minimizing the total life cycle cost in embodied energy; environmental impact and consumption of matter/energy throughout the life cycle of a facility, by doing it right the first time. In this edition, existing chapters have been brought up to date,

to include contemporary sustainability concerns, such as: sustainability design, construction and materials, and maintainability of green features. Maintainability of Facilities is written for practitioners and students in architecture, engineering, building, real estate, construction, project management, facilities management, quantity and building surveying.

These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. wireless sensor network
wsn may be a self
contoured gathering of
spatially distributed
and firm sensors with
less framework that
monitor and record the
physical conditions of
the surroundings and
cooperatively pass the
data through the network
to a central location or
sink wherever the data
is noticed and analyzed

please can you help me
i need the matlab code
for genetic algorithm
that is using the ga

optimization tool in matlab for placing sensor nodes in a wireless network i have to use the genetic algorithm to find the optimal position of a sensor node as optimizing the network coverage the nodes cover the maximum capture field
