Elizabeth E. Epstein, Barbara S. McCrady

Facing Addiction in America Office of the Surgeon General, U.S. Department of Health and Human Services, 2017-08-15 All across the United States, individuals, families, communities, and health care systems are struggling to cope with substance use, misuse, and substance use disorders. Substance misuse and substance use disorders have devastating effects, disrupt the future plans of too many young people, and all too often, end lives prematurely and tragically. Substance misuse is a major public health challenge and a priority for our nation to address. The effects of substance use are cumulative and costly for our society, placing burdens on workplaces, the health care system, families, states, and communities. The Report discusses opportunities to bring substance use disorder treatment and mainstream health care systems into alignment so that they can address a person's overall health, rather than a substance misuse or a physical health condition alone or in isolation. It also provides suggestions and recommendations for action that everyone—individuals, families, community leaders, law enforcement, health care professionals, policymakers, and researchers—can take to prevent substance misuse and reduce its consequences.

A Guide to Substance Abuse Services for Primary Care Clinicians Eleanor J. Sullivan, 1997 EXECUTIVE SUMMARY AND RECOMMENDATIONS: The goal of this TIP is to recommend guidelines for primary care clinicians to follow in caring for patients with alcohol and other drug use disorders. These guidelines were developed by a Consensus Panel of clinicians, researchers, and educators who work on the prevention and treatment of substance use disorders. Protocols are based partly on research evidence, partly on Panel members' clinical experience. The algorithm to the left follows a patient with substance use problems who presents in a primary care setting. The chart will serve as a guide or road map through screening, brief assessment, brief intervention, assessment, referral, specialized treatment, and followup care as they are detailed in the TIP. Since substance use disorders are often chronic conditions that progress slowly over time, primary care clinicians, through their regular, long-term contact with patients, are

in an ideal position to screen for alcohol and drug problems and monitor each patient's status. Furthermore, studies have found that primary care clinicians can actually help many patients decrease alcohol consumption and its harmful consequences through office-based interventions that take only 10 to 15 minutes (Kahan et al., 1995; Wallace et al., 1988). This potential, however, is largely untapped: Saitz and colleagues found that of a sample of patients seeking substance abuse treatment, 45 percent reported that their primary care physician was unaware of their substance abuse (Saitz et al., in press). Yet even though screening and limited treatment of substance use disorders do not require a large time investment, the Consensus Panel that developed this TIP recognized that many primary care clinicians are already overwhelmed by the demands imposed by expanded gatekeeper functions. The Panel realized that a practical approach to addressing patients' substance abuse problems was needed: one that recognized the time and resource limitations inherent in primary care practice and offered a series of graduated approaches that could be incorporated into a normal clinic or office routine. Biological, medical, and genetic factors as well as psychological, social, familial, cultural, and other environmental features all bear on substance abuse. Addressing the condition effectively requires a team effort, especially when it has progressed beyond the early stage. For this reason, in addition to screening and intervention treatment options, these guidelines include information about viable referral for assessment and treatment, as well as followup. Readers will notice that the TIP contains more information on alcohol use and abuse than on use of illicit drugs. This reflects both the scope of the problems and the research literature available about them. It is estimated that about 18 million people with alcohol use problems and

5 million users of illicit drugs need treatment. Although the Panel recognizes that tobacco is an addictive substance with a major public health impact, it is not included in this TIP because the topic falls outside CSAT's purview. Readers are referred to *Smoking Cessation: a Guide for Primary Care Clinicians*, published by the Agency for Health Care Policy and Research (Agency for Health Care Policy and Research, 1996). The Consensus Panel's recommendations are based on a combination of clinical experience and research-based evidence. In the list below, the summary guidelines supported by the research literature are followed by (1); clinically based recommendations are marked (2). Citations supporting the former are referenced in the body of the document. Screening and assessment instruments mentioned below are reproduced and discussed in Chapters 2 and 4 and Appendix C. The guidelines are presented in more detail in Chapter 6.

Overcoming Alcohol Use Problems Elizabeth E. Epstein, Barbara S. McCrady, 2009-04-27 Problems with alcohol use are common and often occur with other psychological and social problems as well. Left untreated, alcohol use disorder can have significant impact on a person's functioning, health, and relationships. This cognitive-behavioral treatment has been scientifically proven to help individuals achieve and maintain abstinence. The treatment protocol has been developed with the benefit of each author's 25+ years of clinical experience in treating substance abusers; it is user-friendly and easy to deliver in a clinically meaningful way. Rooted in the client's individualized assessment.

The Relative Effectiveness of 10 Adolescent Substance Abuse Treatment Programs in the United States Andrew R. Morral, 2006 This study compares the

effectiveness of 11 U.S. community-based substance abuse treatment programs for adolescents. After accounting for pretreatment differences between the youths entering each program, no persuasive evidence was found to suggest that any program produced superior outcomes. The significance of the findings for current efforts to develop outcomes-based treatment performance measurement systems is highlighted in the discussion.

The Alcoholism and Drug Abuse Patient Robert R. Perkinson, 2003 The addiction field has long needed a comprehensive set of exercises counselors could use to guide patients through good treatment. The workbooks developed by Dr. Perkinson take the patient from the beginning of treatment to the end. They are written in such a manner that Dr. Perkinson is your mentor and is conversing with you, sharing with you his vast area of expertise and knowledge about recovery. These patient exercises meet the highest standards demanded by accrediting bodies. --Dr. Bob Carr, Director Substance Abuse Program and Mental Health Services, Sioux Falls V.A. Regional Medical Center, South Dakota I have used the exercises in *The Gambling Addiction Patient Handbook* for years. Patients have reported reduced levels of stress from having their assignments organized in this format. It is a challenge for the pathological gambler to slow down and learn in early recovery. --Sue Van Doren, Nationally Certified Gambling Counselor I have been working with compulsive gamblers and their family members for 12 years and find this work extremely rewarding and challenging. I

have been utilizing Dr. Perkinson's workbooks for 10 years and have found them to be some of the most useful tools in helping addicts and gamblers identify the many ways that addiction has impacted their lives. Our clients benefit from the straightforward approach of the workbooks and the clear instructions of how to begin incorporating a 12-step recovery program into their lives. I highly recommend Dr Perkinson's workbooks. --Lisa Vig, Licensed Addiction Counselor and Nationally Certified Gambling Counselor. Gamblers Choice, Fargo, North Dakota I have been in the chemical dependency field for over 28 years. I have worked as a counselor, clinical supervisor and executive director in a number of treatment centers. These are the best exercises for alcoholics, drug addicts and problem gamblers that I have ever seen. I have used them for years and patients find them easy to understand. The material covers everything an addict needs to know to enter a stable recovery. I highly recommend these patient handbooks. Patients love them and they make the counselor's job easy. The book makes the job easy as all you will need to help your patient is in one place. --Bob Bogue, CCSII, CCDC III, Clinical Supervisor Dr. Perkinson does an excellent job of bringing together and individualizing 12 step treatment for addicts and gamblers including identifying character defects and relapse prevention. Comments from patients include, 'it has opened my eyes to my gambling and behaviors associated with it' and 'I feel it is easy to work and very self explanatory.' --Ron Scherr, CCDC II, Certified Chemical Dependency Counselor, Avera St. Lukes, Worthmore Treatment Center

Clinical Guide to Alcohol Treatment Robert J.

Meyers, Jane Ellen Smith, 1995-08-04 This book is the first complete guide to implementing the Community Reinforcement Approach (CRA), an empirically based, highly effective cognitive-behavioral program for treating alcohol problems. CRA acknowledges the powerful role of environmental contingencies in encouraging or discouraging drinking, and attempts to rearrange these contingencies so that a non-drinking lifestyle is more rewarding than a drinking one. Unique in its breadth, the approach utilizes social, recreational, familial, and vocational strategies to aid clients in the recovery process. This authoritative manual is a hands-on guide to applying these therapeutic procedures. The authors present a step-by-step guide to each component of the treatment plan, many of which have been shown to be effective forms of treatment in themselves. Topics include behavioral skills training, social and recreational counseling, marital therapy, motivational enhancement, job counseling, and relapse prevention. Each chapter provides detailed instructions for conducting a procedure, describes what difficulties to expect, and presents strategies for overcoming them. Sample dialogues between clients and therapists, annotated by the authors, further illuminate the treatment process. The book concludes with a chapter that both addresses the common mistakes made when implementing CRA, and emphasizes the flexibility and benefits of this total treatment plan. This book is an invaluable resource for a

wide range of practitioners including psychologists, psychiatrists, substance abuse counselors, and social workers.
