Neale Monks

The Messengers Mike Clelland, 2020-08-19 Without question, this is a classic by one of the most exciting new authors in the UFO field today. After reading it, your view of reality will never be the same. The owl has held a place of reverence and mystique throughout history. And as strange as this might seem, owls are also showing up in conjunction with the UFO experience. Mike Clelland has collected a wealth of first-hand accounts in which owls manifest in the highly charged moments that surround alien contact. There is a strangeness to these accounts that defy simple explanations. This book explores implications that go far beyond what more conservative researchers would dare consider. But the owl connection encompasses more than the UFO experience. It also includes profound synchronicities, ancient archetypes, dreams, shamanistic experiences, personal transformation, and death. From the mythic legends of our ancient past to the first-hand accounts of the UFO abductee, owls are playing some vital role. This is also a deeply personal story. It is an odyssey of self-discovery as the author grapples with his own owl and UFO encounters. What plays out is a story of transformation with the owl at the heart of this journey.

Typeset in the Future Dave Addey, 2018-12-11 A designer's deep dive into seven science fiction films, filled with "gloriously esoteric nerdery [and] observations as witty as they are keen" (Wired). In *Typeset in the Future*, blogger and designer Dave Addey invites sci-fi movie fans on a

journey through seven genre-defining classics, discovering how they create compelling visions of the future through typography and design. The book delves deep into 2001: A Space Odyssey, Star Trek: The Motion Picture, Alien, Blade Runner, Total Recall, WALL·E, and Moon, studying the design tricks and inspirations that make each film transcend mere celluloid and become a believable reality. These studies are illustrated by film stills, concept art, type specimens, and ephemera, plus original interviews with Mike Okuda (Star Trek), Paul Verhoeven (Total Recall), and Ralph Eggleston and Craig Foster (Pixar). Typeset in the Future is an obsessively geeky study of how classic sci-fi movies draw us in to their imagined worlds.

Astronomy For Dummies Stephen P.

Maran,2017-09-05 Your updated guide to exploring the night sky Do you know the difference between a red giant and a white dwarf? From asteroids to black holes, this easy-to-understand guide takes you on a grand tour of the universe. Featuring updated star maps, charts, and an insert with gorgeous full-color photographs, Astronomy For Dummies provides an easy-to-follow introduction to exploring the night sky. Plus, this new edition also comes with chapter quizzes online to help your understanding. For as long as people have been walking the earth, those people have looked up into the night sky and wondered about the nature of the cosmos. Without the benefit of science to provide answers, they relied on myth and superstition to help them make sense of what they saw. Lucky for us, we live at a time when

regular folks, equipped with nothing more than their naked eyes, can look up into the night sky and gain admittance to infinite wonders. If you know what to look for, you can make out planets, stars, galaxies, and even galactic clusters comprising hundreds of millions of stars and spanning millions of light-years. Whether you're an amateur astronomer, space enthusiast, or enrolled in a first year astronomy course, *Astronomy For Dummies* gives you a reason to look into the heavens. Includes updated schedules of coming eclipses of the Sun and Moon and a revised planetary appendix Covers recent discoveries in space, such as water on the Moon and Pluto's demotion from planet status Collects new websites, lists of telescope motels, sky-watching guides, and suggestions for beginner's telescopes and suppliers Provides free online access to chapter quizzes to help you understand the content Ever wonder what's out there in the big ol' universe? This is the book for you!

Astronomy with a Home Computer Neale

Monks, 2005-03-03 Here is a one-volume guide to just about everything computer-related for amateur astronomers! Today's amateur astronomy is inextricably linked to personal computers. Computer-controlled go-to telescopes are inexpensive. CCD and webcam imaging make intensive use of the technology for capturing and processing images. Planetarium software provides information and an easy interface for telescopes. The Internet offers links to other astronomers, information, and software. The list goes on and on. Find out here how to choose the best planetarium program:

are commercial versions really better than freeware? Learn how to optimise a go-to telescope, or connect it to a lap-top. Discover how to choose the best webcam and use it with your telescope. Create a mosaic of the Moon, or high-resolution images of the planets... Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer, whether it is running Microsoft Windows, Mac O/S or Linux. It doesn't matter what kind of telescope you own either - a small refractor is just as useful as a big go-to SCT for most of the projects in this book.

Falling to Earth Al Worden, Francis

French, 2012-07-24 As command module pilot for the Apollo 15 mission to the moon in 1971, Al Worden flew on what is widely regarded as the greatest exploration mission that humans have ever attempted. He spent six days orbiting the moon, including three days completely alone, the most isolated human in existence. During the return from the moon to earth he also conducted the first spacewalk in deep space, becoming the first human ever to see both the entire earth and moon simply by turning his head. The Apollo 15 flight capped an already-impressive career as an astronaut, including important work on the pioneering Apollo 9 and Apollo 12 missions, as well as the perilous flight of Apollo 13. Nine months after his return from the moon, Worden received a phone call telling him he was fired and ordering him out of his office by the end of the week. He refused to leave. What happened in those nine months, from being honored with parades and meetings with world leaders to being unceremoniously fired, has been a

source of much speculation for four decades. Worden has never before told the full story around the dramatic events that shook NASA and ended his spaceflight career. Readers will learn them here for the first time, along with the exhilarating account of what it is like to journey to the moon and back. It's an unprecedentedly candid account of what it was like to be an Apollo astronaut, with all its glory but also its pitfalls.

Archaeology Anthropology and Interstellar Communication Douglas A. Douglas A.

Vakoch, 2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers,

and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Project Hail Mary Andy Weir,2022-10-04 #1 NEW YORK TIMES BESTSELLER • From the author of *The Martian*, a lone astronaut must save the earth from disaster in this “propulsive” (Entertainment Weekly), cinematic thriller full of suspense, humor, and fascinating science—in development as a major motion picture starring Ryan Gosling. HUGO AWARD FINALIST • ONE OF THE YEAR’S BEST BOOKS: Bill Gates, GatesNotes, New York Public Library, Parade, Newsweek, Polygon, Shelf Awareness, She Reads, Kirkus Reviews, Library Journal • “An epic story of redemption, discovery and cool speculative sci-fi.”—USA Today “If you loved *The Martian*, you’ll go crazy for Weir’s latest.”—The Washington Post Ryland Grace is the sole survivor on a desperate, last-chance mission—and if he fails, humanity and the earth itself will perish. Except that right now, he doesn’t know that. He can’t even remember his own name, let alone the

nature of his assignment or how to complete it. All he knows is that he's been asleep for a very, very long time. And he's just been awakened to find himself millions of miles from home, with nothing but two corpses for company. His crewmates dead, his memories fuzzily returning, Ryland realizes that an impossible task now confronts him. Hurtling through space on this tiny ship, it's up to him to puzzle out an impossible scientific mystery—and conquer an extinction-level threat to our species. And with the clock ticking down and the nearest human being light-years away, he's got to do it all alone. Or does he? An irresistible interstellar adventure as only Andy Weir could deliver, *Project Hail Mary* is a tale of discovery, speculation, and survival to rival *The Martian*—while taking us to places it never dreamed of going.

The Promise of the Suburbs Sarah

Bilston,2019-01-01 A study of the fast-growing Victorian suburbs as places of connection, creativity, and professional advance, especially for women Literature has, from the start of the nineteenth century, cast the suburbs as dull, vulgar, and unimaginative margins where, by definition, nothing important takes place. Sarah Bilston argues that such attitudes were forged to undermine the cultural authority of the emerging middle class and to reinforce patriarchy by trivializing women's work. Resisting these stereotypes, Bilston reveals that suburban life offered ambitious women, especially writers, access to supportive communities and opportunities for literary and artistic experimentation as well as professional advancement. Bilston interprets both familiar figures (sensation novelist Mary Elizabeth Braddon) and less well-known writers (including interior design journalist Jane Ellen Panton and garden writer Jane Loudon) to reveal how women and society at large navigated a fast-growing, rapidly changing landscape. Far from being a cultural dead end, the new suburbs promised women access to the exciting opportunities of modernity.

The New Yorker ,1979

Dreamlands Chrissie Iles,2016-01-01 A fascinating survey of pioneering work in experimental cinema and art from 1905 to the present day, revealing the high stakes and transformative potential of these forms This generously illustrated publication surveys the work of filmmakers and artists who have pushed the material and conceptual boundaries of cinema. Over the past century, the material, optical, abstract, spatial, and tactile properties of film have been tested at a level of experimentation and utopian ambition that is generally unrecognized. Whether creating synesthetic or 3-D environments, projective or non-projective installations, generations of leading-edge artists have explored how technology transforms experience. The essays published here offer an intensive look at the themes of cinematic space, formats of the screen, animation and CGI, the body and the cyborg, and the materiality of film. Contributors place particular emphasis on the idea of the cinema as a sensorium and on the ways in which it defines the human body, both through representation and in

relation to the projected image. An immersive plate section brings together rarely seen and previously unpublished stills, in addition to concept drawings from historic and contemporary films.
