Membrane-Peptide Interactions Nuno C. Santos, Sónia Gonçalves, 2020 This book summarizes the importance of peptide-membrane interactions, mostly aiming at developing new therapeutic approaches. The experimental and computational methodologies used to investigate such interactions reveal the evolution of existing biophysical methodologies, shedding some light on potential applications of peptides, as well as on the improvement of their design. Understanding the determinants for peptide-membrane interactions may also improve the knowledge of membrane functions such as the membrane transport, fusion, and signaling processes, contributing to the development of new agents for highly relevant applications ranging from disease treatment to food technology.

Cytochromes P450: Drug Metabolism, Bioactivation and Biodiversity 2.0 Patrick M. Dansette, Danièle Werck-Reichhart, 2021-08-31 This book, *Cytochromes P450: Drug Metabolism, Bioactivation and Biodiversity*, presents five papers on human cytochrome P450 (CYP) and P450 reductase, three reviews on the role of CYPs in humans and their use as biomarkers, six papers on CYPs in microorganisms, and one study on CYP in insects. The first paper reports the in silico modeling of human CYP3A4 access channels. The second uses structural methods to explain the mechanism-based inactivation of CYP3A4 by mibefradil, 6,7-dihydroxy-bergamottin, and azamulin. The third article compares electron transfer in CYP2C9 and CYP2C19 using structural and biochemical methods, and the fourth uses kinetic methods to study electron transfer to CYP2C8 allelic mutants. The fifth article characterizes electron transfer between the reductase and CYP using in silico and in vitro methods, focusing on the conformations of the reductase. Then, two reviews describe clinical implications in cardiology and oncology and the role of fatty acid

metabolism in cardiology and skin diseases. The second review is on the potential use of circulating extracellular vesicles as biomarkers. Five papers analyze the CYPomes of diverse microorganisms: the *Bacillus* genus, *Mycobacteria*, the fungi *Tremellomycetes*, *Cyanobacteria*, and *Streptomyces*. The sixth focuses on a specific *Mycobacterium* CYP, CYP128, and its importance in *M. tuberculosis*. The subject of the last paper is CYP in *Sogatella furcifera*, a plant pest, and its resistance to the insecticide sulfoxaflor.

Ion and Molecule Transport in Membrane Systems Victor V. Nikonenko,2021 Membranes play an enormous role in our life. Biological cell membranes control the fluxes of substances in and out of cells. Artificial membranes are widely used in numerous applications including “green” separation processes in chemistry, agroindustry, biology, medicine; they are used as well in energy generation from renewable sources. They largely mimic the structure and functions of biological membranes. The similarity in the structure leads to the similarity in the properties and the approaches to study the laws governing the behavior of both biological and artificial membranes. In this book, some physico-chemical and chemico-physical aspects of the structure and behavior of biological and artificial membranes are investigated.
