*Personal Information Management* William P. Jones,Jaime Teevan,2011-07-01 In an ideal world, everyone would always have the right information, in the right form, with the right context, right when they needed it. Unfortunately, we do not live in an ideal world. This book looks at how people in the real world currently manage to store and process the massive amounts of information that overload their senses and their systems, and discusses how tools can help bring these real information interactions closer to the ideal. Personal information management (PIM) is the study and practice of the activities people perform to acquire, organize, maintain, and retrieve information for everyday use. PIM is a growing area of interest as we all strive for better use of our limited personal resources of time, money, and energy, as well as greater workplace efficiency and productivity. Personal information is currently fragmented across electronic documents, email messages, paper documents, digital photographs, music, videos, instant messages, and so on. Each form of information is organized and used to complete different tasks and to fulfill disparate roles and responsibilities in an individual's life. Existing PIM tools are partly responsible for this fragmentation. They can also be part of the solution that brings information together again. A major contribution of this book is its integrative treatment of PIM-related research. The book grows out of a workshop on PIM sponsored by the National Science Foundation, held in Seattle, Washington, in 2006. Scholars from major universities and researchers from companies such as Microsoft Research, Google, and IBM offer approaches to conceptual problems of information management. In doing so, they provide a framework for thinking about PIM as an area for future research and innovation.

**Personal Information Management** Barbara Etzel,Peter Thomas,1999 Electronic mail, personal organizers, voice mail, all were introduced as time-saving devices designed to promote an easier and more efficient workplace. Yet many professionals find that making effective use of these new forms of communication technology can become a time-consuming task. In this handbook written for the office of the 21st century, Barbara Etzel and Peter J. Thomas provide guidance for those struggling to manage the growing volume of mail, memos, e-mail messages, and electronic documents that arrives daily. Personal Information Management details the skills professionals need to process this information, save time, and work more effectively. Etzel and Thomas present common organizational difficulties and enumerate concrete techniques for overcoming them. They guide the reader through a variety of computer software and hardware products, paper-based information products, and personal time management techniques, helping the reader to develop and individually-tailored Personal Information Management Strategy. Technologies covered include accounting and business software, word processors, databases, personal organizers, e-mail programs, tracking and storage packages, personal digital assistants, CD-Roms, computer backup devices, scanning device, voice mail, cellular phones, beepers, and fax machines, to name only a few. including an appendix listing the names and addresses of companies that Produce information technologies, Personal Information Technologies is essential reading for anyone suffering from information overload. Designed to be adaptable to emerging technologies, the techniques they provide will be applicable regardless for what the information age brings next.

The Future of Personal Information Management, Part 1 William Jones,2012-03-01 We are well into a second age of digital information. Our information is moving from the desktop to the laptop to the palmtop and up into an amorphous cloud on the Web. How can one manage both the challenges and opportunities of this new world of digital information? What does the future hold? This book provides an important update on the rapidly expanding field of personal information management (PIM). Part I (Always and Forever) introduces the essentials of PIM. Information is personal for many reasons. It's the information on our hard drives we couldn't bear to lose. It's the information about us that we don't want to share. It's the distracting information demanding our attention even as we try to do something else. It's the information we don't know about but need to. Through PIM, we control personal information. We integrate information into our lives in useful ways. We make it ours. With basics established, Part I proceeds to explore a critical interplay between personal information always at hand through mobile devices and forever on the Web. How does information stay ours in such a world?
