Atherosclerosis, Hypertension and Diabetes Grant N. Pierce, Makoto Nagano, Peter Zahradka, 2003-04-30 This volume is devoted to atherosclerosis, hypertension, and diabetes, three of the most important disease conditions in the world today. Nutritional intervention, cholesterol lowering agents, lipids themselves, particularly oxidized LDL, protein modification by ADP-ribose, bone marrow study, endothelial cell dysfunction, angiotensin, and the role of infection and inflammation are all discussed in the context of atherosclerotic cardiovascular disease. The hypertension section focuses on factors that may be responsible for high blood pressure, such as genetic predisposition, vascular hyperplasia and remodeling, insulin resistance, neurological aspects such as hypothalamic peptides. Also discussed are the possible contributions of the cellular function of the endothelium, nutrition, kidney dysfunction, leptin, and the brain. Novel routes of drug delivery for treatment of hypertension is also a focus. As for diabetes, the risk factors and mechanisms responsible for diabetic vascular and cardiac dysfunction are discussed. Lipid profile changes and fibrinolysis in diabetic patients is detailed, along with adipogenesis, diabetic cardiomyopathy, energy metabolism in the diabetic heart, vanadate as an alternative to insulin, insulin resistance mechanisms, and neurotransmitters as targets for the prevention of cardiovascular disease and diabetes. These manuscripts were invited from scientists who presented state of the art lectures at the XVII World Congress of the International Society for Heart Research held in Winnipeg in July 2001.

Essential Aspects of Immunometabolism in Health and Disease Niels Olsen Saraiva Camara, Jose C Alves-Filho, Pedro Manoel Mendes de Moraes-Vieira, Vinicius Andrade-Oliveira, 2021-10-21 Immunometabolism has emerged as an intersectional crossroad between metabolism and immune response. Over the past decade, it has become clear that most - if not all - immune cell functions are not separated from cellular metabolism. Although seminal works have addressed the metabolic fate of immune cells during differentiation and function, the physiological status of a given tissue is also dependent on the cell metabolism. The dialogue between immune cells and their microenvironment can also modulate cellular metabolism, which can trigger the onset and progression of a multitude of inflammation-mediated diseases. Thus, uncovering the specific characteristics of the metabolism in different immune cells types and in different conditions, can shed light into the molecular mechanisms of disease and help develop new drugs and therapeutic strategies to treat immune diseases. The edited volume *Essentials aspects of Immunometabolism* will give the readers a broad view on how metabolic pathways can influence many types of immune cells during activation, differentiation and function, in health and disease. Of note, the structure of the book was created thinking not only on the experienced immunologist but also on undergraduate and graduate students, physicians, and all members of the scientific community interested in this exciting field of research.

Time Distortions in Mind, 2015-07-14 Time Distortions in Mind brings together current research on aspects of temporal processing in clinical populations, in the ultimate hope of elucidating the interdependence between perturbations in timing and disturbances in the mind and brain. Such research may inform not only typical psychological functioning, but may also elucidate the psychological consequences of any pathophysiological differences in temporal processing. This collection of current knowledge on temporal processing in clinical populations is an excellent reference for the student and scientist interested in the topic, but it also serves as the stepping-stone to share ideas and push forward the advancement in understanding how distorted timing can lead to a disturbed brain and mind or vice versa. PI3K signalling Klaus Okkenhaug, Martin Turner, Michael R Gold, 2015-03-05 The PI3Ks control many key functions in immune cells. PI3Ks phosphorylate PtdIns(4,5)P₂ to yield PtdIns(3,4,5)P₃. Initially, PI3K inhibitors such as Wortmannin, LY294002 and Rapamycin were used to establish a central role for PI3K pathway in immune cells. Considerable progress in understanding the role of this pathway in cells of the immune system has been made in recent years, starting with analysis of various PI3K and Pten knockout mice and subsequently mTOR and Foxo knockout mice. Together, these experiments have revealed how PI3Ks control B cell and T cell development, T helper cell differentiation, regulatory T cell development and function, B cell and T cell trafficking, immunoglobulin class switching and much, much more. The PI3K inhibitor idelalisib has recently been approved for the treatment of B cell lymphoma. Clinical trials of other PI3K inhibitors in autoimmune and inflammatory diseases are also in progress. This is an opportune time to consider a Research Topic considering what we have learned about the PI3K signalling module in lymphocyte biology and how this is making an impact on clinical immunology and haematology.

Epithelial Transport Physiology George A. Gerencser, 2010-03-10 Biological cell membranes regulate the transfer of matter and information between the intracellular and extracellular compartments as basic survival and maintenance functions for an organism. This volume contains a series of reviews that are concerned with how epithelial plasma membranes regulate the transport of solutes between the intracellular and extracellular compartments of a cell. This book is also an attempt to analyze the molecular basis for the movement of various solutes across an epithelial cell membrane. This volume is devoted to a diversity of epithelial transport mechanisms in representative cell membranes of a variety of living things. The first section of the book (Chapters 1–6) focuses on mechanisms of solute transport in epithelia of invertebrates. The last section which comprises ten chapters (Chapters 7–16) deals with solute transporters in epithelial cell membranes of vertebrates. It is hoped that with this particular ordering the reader can glean a telescopic view of the evolutionary history of the various epithelial solute transporters.

Amendment to the Convention on the Physical Protection of Nuclear Material International Atomic Energy Agency, 2006 The Convention on the Physical Protection of Nuclear Material was signed at Vienna and at New York on 3 March 1980. The Convention is the only international legally binding undertaking in the area of physical protection of nuclear material. It establishes measures related to the prevention, detection and punishment of offenses relating to nuclear material. A Diplomatic Conference in July 2005 was convened to amend the Convention and strengthen its provisions. The amended Convention makes it legally binding for States Parties to protect nuclear facilities and material in peaceful domestic use, storage as well as transport. It also provides for expanded cooperation between and among States regarding rapid measures to locate and recover stolen or smuggled nuclear material, mitigate any radiological consequences of sabotage, and prevent and combat related offences. The amendments will take effect once they have been ratified by two-thirds of the States Parties of the Convention.

Signaling Pathways and Molecular Mediators in Metastasis Alessandro Fatatis, 2012-01-03 This work presents the most advanced discoveries from translational research laboratories directly involved in identifying molecules and signalling pathways that play an instrumental role in metastasis. In contrast to other works, conventionally focused on a single type of tumour, the various chapters in this book provide a broad perspective of the similarities and discrepancies among the dissemination of several solid malignancies. Through recurrent and overlapping references to molecular mechanisms and mediators, the readers will gain knowledge of the common ground in metastasis from a single source. Finally, an introductory chapter provides a clinical perspective of the problems presented by metastatic tumours for diagnosis and treatment. The work presented here is directed to researchers in tumour biology with a developing interest in metastatic dissemination as well as medical and graduate students seeking to expand and integrate the notions acquired in basic cancer biology and oncology courses.

How to Train Your Dragon: Dragonvine Dreamworks, Dean DeBlois, Richard Hamilton, 2018-09-04 This second standalone graphic novel based on the film series is a new adventure that takes place shortly after the events in *How to Train Your Dragon 2*, during the period in which Hiccup is desperately trying to fill his father's role as the chief of Berk. Created with the help of the film's writer, director, and producer, Dean DeBlois, it bridges the gap between the second and third films. Hiccup, Toothless, and the rest of the dragon riders encounter two deadly yet mysteriously linked threats: One is an island consumed by Dragonvine, an uncontrollable force of nature that's poisonous to humans and deadly to dragons. The other is an all-new, all-terrifying dragon species--the web-spitting Silkspanners!

Calcium Signalling and Disease Ernesto Carafoli, Marisa Brini, 2007-09-29 Authors highlight several promising discoveries in the field of calcium signaling that provide new information about both genetic and acquired pathologies. Neuronal and Vascular Plasticity Kenneth Maiese, 2003-03-31 Galen in the 2nd century AD could be considered one of the earliest researchers who attempted to bridge the gap between basic science and clinical medicine. Galen is given initial credit for the recognition that vital organs of the body are exquisitely dependent upon the intact function of the circulatory system. The doctrines of Galenic physiology stated that blood was produced in the liver, flowed to the heart to obtain vital spirits, and subsequently bathed the brain to gain animal spirits. The vital spirits described by Galen were later disclosed to consist of oxygen. Oxygen was discovered independently by Schiele in Sweden and by Priestly in England. It was named oxygen (acid-former) by Antoine Lavoisier (1743-1794) of France. Lavoisier made significant medical discoveries concerning oxygen's role in respiration. In animal experiments, Lavoisier and others discovered that anoxia could rapidly lead to death. The initial work by these investigators helped provide direction for modern clinical science and the treatment of disease, especially concerning disorders of the nervous system. Remarkably, our understanding of human disease continues to grow at an exponential rate. At times, the accumulation of knowledge of the cellular components of clinical disease exceeds all prior expectations held just a few years ago, such as evidenced by the recent cloning of the human and mouse genomes. Despite these advances, both biomedical scientists and clinicians sometimes are at a loss to recognize the crucial link between basic science discovery and the development of therapeutic regimens for clinical disease.
