**Cloud Ethics** Louise Amoore, 2020-05-01 In Cloud Ethics Louise Amoore examines how machine learning algorithms are transforming the ethics and politics of contemporary society. Conceptualizing algorithms as ethicopolitical entities that are entangled with the data attributes of people, Amoore outlines how algorithms give incomplete accounts of themselves, learn through relationships with human practices, and exist in the world in ways that exceed their source code. In these ways, algorithms and their relations to people cannot be understood by simply examining their code, nor can ethics be encoded into algorithms. Instead, Amoore locates the ethical responsibility of algorithms in the conditions of partiality and opacity that haunt both human and algorithmic decisions. To this end, she proposes what she calls cloud ethics—an approach to holding algorithms accountable by engaging with the social and technical conditions under which they emerge and operate.

Nuclear pores and transport at the nuclear envelope, including pore complex structure, assembly and function and import and export pathways. 3. Nuclear envelope dynamics, including dynamics of lamina assembly and disassembly. 4. Nuclear signaling and transcription regulation, including signaling to the nucleus and spectrin repeat proteins and their implications or communication between the nucleus and cytoplasm.

**Exploring Causal Risk Factors for Metabolic and Endocrine Disorders** Youxin Wang, Xiao Wang, Haifeng

Hou, Di Liu, 2024-02-15 Metabolic and endocrine disorders are the main burden of noncommunicable chronic diseases, and they serve as important risk factors for cardiovascular diseases or multiple cancers. To date, a large number of correlates have been identified, but few of them were modifiable and causal. In general, causal relationships can be conceptualized not only in a probabilistic sense involving statistical terms and procedures, but also in the complexity of biological phenomena. The limited understanding of many underlying mechanisms hinders a deterministic conceptualization of disease causation. The identification of modifiable risk factors that have a causal effect on the incidence of these diseases and their complications is critical to the primary or secondary prevention of metabolic and endocrine diseases.

### **From Stimulus to Behavioral Decision-Making**

Gérard Manière, Gérard Coureaud, 2020-02-13 The proper detection of stimuli coming from the environment is vital for any organism, in vertebrates as in invertebrates. Animals use different sensory modalities, independently or simultaneously, to detect them, such as audition, vision, olfaction, taste and touch. Indeed, in their ecosystems, animals constantly perceive various sensory signals. These stimuli come either from the environment (light, temperature, humidity, salinity...), or from other organisms (calls, colors, movements, pheromones, allomones, ...). This eBook combines studies and comments (research articles, reviews, opinions ...), dealing with how animals detect a precise simple or complex sensory signal, confer a value to that signal, and respond to it by devoted and adaptive behaviors. This eBook provides a general overview for the detection of identified stimuli, and the

mechanisms that lead to decision-making in animals. It also highlights the differences and similarities that may exist between vertebrates and invertebrates.

**Oxidative Stress in Diabetic Retinopathy** Ángel Luis Ortega, 2021-03-09 The combination of an increasing prevalence of diabetes and the aging of populations enables the appearance of a greater number of associated complications such as diabetic retinopathy. Diabetic retinopathy is the leading cause of preventable vision loss in working-age adults. The objective of this Special Issue is to highlight the existing evidence regarding the relationship between oxidative

stress and low-grade chronic inflammation induced by hyperglycemia with the development and progression of diabetic retinopathy, with an emphasis on the importance of early diagnosis and the use of antioxidant and anti-inflammatory approaches to prevent or delay the harmful effects of diabetes on retinal tissue.

**The Guenons: Diversity and Adaptation in African Monkeys** Mary E. Glenn, Marina Cords, 2006-04-11 It has been twelve years since a work relating to the long-tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild. Since that time, new guenon species and subspecies have been discovered, previously unstudied guenon species have become the subject of long-term research projects, and knowledge of the more well-known guenon species has greatly increased. This volume presents novel information and keen insight on research previously studied and newly discovered. A wide range of topics related to guenon biology is presented, including evolution, taxonomy, biogeography, reproductive physiology, social and positional behavior, ecology, and conservation. Composed of 26 chapters compiled by 47 authors, many of whom are young investigators in their field, *The Guenons: Diversity and Adaptation in African Monkeys* provides a valuable resource for researchers and scientists in the fields of anthropology, primatology, zoology, and conservation biology.
