Elemental Difference and the Climate of the Body Emily Anne

Parker, 2021-06-17 In nineteenth-century Europe, differences among human bodies were understood to be matters of scientific classification. At the height of scientific acceptance, it was unthinkable that race or sex or diagnosis or indigence were invention. Today, however, differences among human bodies are understood as matters of social construction. The philosophy of social construction understands differences among humans to be matters of human imposition. Social constructionism's way of understanding the origin of differences among humans is so well-established as to have no currently viable alternatives, even among new materialists, social constructionism's most ardent critics. This book argues that new materialists and social constructionists share a distinction between the political and the ecological. Emily Anne Parker centers her argument on the philosophical concept of the polis, according to which there is one complete human form. It is this form that is to blame for our current political and ecological crisis. Political hierarchies and ecological crises are often considered to be two different problems: for example, many speak of parallel problems, climate change and racial injustice. Parker argues that these are not parallel crises so much as one problem: the polis. The philosophy of the polis asserts that there is one complete human body, and that body is meant to govern all other things. In that sense there are not two crises, but

instead one concern: to perceive the ways in which this tradition of the polis constrains the present. Elemental difference in the polis is appreciated in the fact that empirical bodily non-identity, an Aristotelian concept, can be called upon to elevate one group of bodies among the rest. Parker builds from Sylvia Wynter, who argues that the very idea of empirical bodily non-identity begins with the modern science of racial anatomy, or what Wynter calls biocentrism. Parker argues that biocentrism is a feature of the polis, according to which the one complete body was defined by its capacity for disembodied thought. The sciences of racial anatomy are a more explicit commitment to biocentrism, but the ranking of matter with respect to one complete human, a body that is the site of supra-natural thinking, is a practice that has always characterized the polis. In this way, the polis is responsible for both political and ecological hierarchy. It is as responsible for what is euphemistically called climate change as it is for the political hierarchy that constitutes it. *Elemental Difference and the Climate of the Body* ultimately bridges the insights of social constructionism and new materialisms to create a philosophy of elemental difference. Difference, rather than needing to be either dismissed based on its social construction or reified in keeping with the hierarchies of the polis, is crucial for addressing contemporary crises of the polis.

Horizons of Difference Ruthanne Crapo Kim, Yvette Russell, Brenda Sharp, 2022-07-01 *Horizons of Difference* offers twelve original essays

inspired by Luce Irigaray's complex, nuanced critique of Western philosophy, culture, and metaphysics, and her call to rethink our relationship to ourselves and the world through sexuate difference. Contributors engage urgent topics in a range of fields, including trans feminist theory, feminist legal theory, film studies, critical race theory, social-political theory, philosophy of religion, environmental ethics, philosophical aesthetics, and critical pedagogy. In so doing, they aim to push the scope of Irigaray's work beyond its horizon. Horizons of Difference seeks conversations that Irigaray herself has yet to fully consider and explores areas that stretch the limits of the notion of sexuate difference itself. Sexuate difference is a unifying mode of thought, bringing disparate disciplines and groups together. Yet it also resists unification in demanding that we continually rethink the basic coordinates of space, place, and identity. Ultimately, Horizons of Difference insists that the fragmented, wounded subjectivities within the dominant regime of masculine sameness can inform how we negotiate space, find place, and transform identity.

Climate Change Impacts in India Chaitanya B. Pande,Kanak N.

Moharir,Abdelazim Negm,2023-11-25 This book focuses on the impact of climate change on India, addressing environmental problems and conducting an analysis of the climate change impact on mitigation processes. It examines crucial factors such as soil capability, soil erosion, soil salinity, and watershed planning, as well as the influence of climate change on water resources, including groundwater. The book explores the interconnections between climate change, soil erosion, natural resources, and agricultural practices, emphasizing their direct or indirect effects on water, vegetation, irrigation planning, and the environment. Furthermore, it delves into various aspects of soil erosion, soil compaction, soil nutrients, aquifers, and the impact of climate change on vegetation, crops, pests, moisture, and sustainable yield. These factors contribute to the development of climate change-related factors within the agricultural sector, ultimately fostering sustainable development

and management practices for the future. The book also highlights the significance of parameters such as land use change analysis, rainfall, water resources, crop yield, sustainable agricultural development, pest management, and disease control in accurately assessing the impact of climate change. The insights gained from these analyses can inform future development and planning strategies. Therefore, this book serves as a valuable resource for researchers, scientists, NGOs, and academics interested in understanding the impact of climate change on natural resources and ecological systems.
