Motifs of Life Altering Experiences Dr. Don J. Feeney Jr.,2008-04-14 The manuscript reveals dynamics of life altering experiences as collaborative products of unwitting entrainments. Unwitting entrainments synchronizing our Motifs can emerge into Life Altering Experiences. The manuscript strives to depict the ironic timing of synchronized entrainment present in perfect harmony. Taking two extra minutes drinking a Starbuck's coffee saves a life creating just enough delay missing the 9-11 tragedy. Addictions, divorce, financial ruin, damaged careers, can all result from unwitting entraining of synchronoized Motifs. Fortuitous as well as disastrous coincidence of synchronizing events are possible outcomes of life altering experiences. Formativeness of multifaceted motifs lie at the core of good and evil manefestations of events affecting trauma and triumph. Recognition and utilization techniques through time alteration of furture designs highlight multi-dimensional consciousness of critical factors in survival and transformation.

Mind-Altering Drugs Mitch Earleywine,2005-04-14 At least one of every three Americans has used an illicit drug. Drugs attract considerable attention in science, legislation, and the media. Nonetheless, many people develop attitudes about drugs and drug users based on limited information. Researchers often find themselves divided into camps based on the drug they study most often, which limits their ability to benefit from important work done on other drugs. As a result, government policies form without a complete understanding of the intoxication experience. What is the nature of intoxication? At first, this question appears to be simple and straightforward, but upon closer inspection, the dichotomous distinctions between everyday awareness and its alternatives grow fuzzy. An in-depth examination of the subjective effects of drugs and the pursuit of altered states soon leads to age-old questions about free will, heredity, environment, and consciousness. Mind-Altering Drugs is the first book to bring together chapters from leading researchers that present diverse, empirically based insights into the subjective experiences of drugs a nd their links to addictive potential. By avoiding simple depictions of psychoactive chemicals and the people who use them, these recognized experts explain how modern research in many fields reveals a complex interaction between people, situations, and substances. Their work demonstrates that only a multitude of approaches can show the nuances of subjective experience, and that each substance may create a different effect with every administration in each user. Simple references to physiological underpinnings or positive reinforcement fail to explain the diverse responses to drugs. However, research has progressed to reveal broad, repeatable evidence that the subjective effects of substances play an important role in our understanding of drug abuse, and so should inform our decisions about policy. This thorough and accessible review of the subjective effects of drugs and the dominant theories behind those effects will provide a wealth of information about the experience of intoxication for lay readers, and a road map to studies in other disciplines for student and professional researchers.

Altering Practices Doina Petrescu,2007-05-07 This collection of essays addresses and defines the state of

contemporary theories and practices of space: it is concerned with the growing importance of technology and communications, the effects of globalization and the change of social demands. Within the current urban and geopolitical contexts, it addresses the emergence of new social and political theories that raise questions of identity and difference in modern society. The book reiterates feminist concerns with space from the critical stance of the new millennium. With contributions from the leading theorists and thinkers from around the world representing the fields of architecture, art, philosophy and gender studies, this book has a truly international and interdisciplinary reach.

Altering Frontiers Corinne Grenier, Ewan Oiry, 2021-07-21 How can healthcare systems be transformed by reimagining their multiple silos to favor processes and practices that are more responsive to local, horizontal initiatives? *Altering Frontiers* analyzes numerous experiences, using a multidisciplinary approach, paying attention to certain actors, collectives and organizational arrangements. Through this work, levers are identified that promote lasting transformation: recognizing the legitimacy of the practices of many who are often invisible; trusting those who know their intervention territory; investing in methodological support; taking advantage of tools and procedures such as instruments for strategic and managerial discussion; and developing the capacity to absorb innovative ideas and experiences that circulate within the environment.

Altering Consciousness Etzel Cardeña, Michael J. Winkelman, 2011-05-18 This authoritative, multidisciplinary overview of altered states of consciousness (ASC) shows how their study is necessary to gain a fundamental understanding of human culture, history, and biology. Altered consciousness is one of humanity's most mystical and life-altering aspects. These remarkable changes in mental state have understandably been a topic of general interest and scientific inquiry across time. Beyond simply satisfying our curiosity, however, studies focused upon altered consciousness can also bring valuable insights into our experience, biology, and culture. This unprecedented two-volume set will intrigue anyone interested in psychology, biology and neurology, science, history, arts and the humanities, and literature on consciousness, from general readers to scholars and researchers. An impressive collection of international contributors address altered states of consciousness from the perspectives of history, evolution, psychology, culture, literature, human biology, contemporary science, and society, seeking to illuminate the causes, effects, and meanings of altered consciousness. The first volume provides an introduction and centers on the importance of altered states in history, culture, and the humanities, while the second volume presents biological and psychological perspectives on altered consciousness and examines their potential for healing and pathology.

Life-Altering Angie Leventis Lourgou, 2024-01-29 The demise of *Roe v. Wade* dramatically altered abortion access across the United States, igniting a new era of polarization over reproductive rights as roughly half of all states moved to ban or significantly restrict terminating a pregnancy. Yet even before the U.S. Supreme Court case *Dobbs v. Jackson Women's Health Organization* eliminated the constitutional right to an abortion on June 24, 2022, people across large swaths of the country were already facing enormous obstacles to ending a pregnancy, including

mandatory waiting periods, early gestational limits, and a dearth of abortion providers. *Life-Altering: Abortion Stories from the Midwest* shares the narratives of women who have terminated pregnancies, despite these barriers, chronicling how laws and court cases can shape the lives and reproductive decisions of individuals. Based on her coverage of reproductive rights for the Chicago Tribune, veteran journalist Angie Leventis Lourgos explores these personal accounts to delve into the most nuanced aspects of abortion, from life-threatening cases to terminations later in gestation to restrictions for minors. The reporting spans the time before Roe and continues through the first year after the landmark Supreme Court case's stunning reversal, which spurred some of the most stringent abortion laws of the past half-century—as well as new and innovative means of access. From interviews Lourgos conducted with women across the Midwest, *Life-Altering* examines different facets of abortion from the perspectives of those who ended their pregnancies, illustrating how court cases, state legislation, and religious beliefs can affect the lives and reproductive choices of ordinary people. By looking at myriad factors that influence the decision whether or not to abort a pregnancy—be they socio-economic, religious, legal, or medical—the accounts collected in this volume challenge the conventional labels of “pro-life” and “pro-choice .”

Altering Nature B. A. Lustig, B.A. Brody, Gerald P. McKenny, 2008-07-15 B. Andrew Lustig, Baruch A. Brody, and Gerald P. McKenny Nearly every week the general public is treated to an announcement of another actual or potential “breakthrough” in biotechnology. Headlines trumpet advances in assisted reproduction, current or prospective experiments in cloning, and developments in regenerative medicine, stem cell technologies, and tissue engineering. Scientific and popular accounts explore the perils and the possibilities of enhancing human capacities by computer-based, biomolecular, or mechanical means through advances in artificial intelligence, genetics, and nanotechnology. Reports abound concerning ever more sophisticated genetic techniques being introduced into agriculture and animal husbandry, as well as efforts to enhance and protect biodiversity. Given the pace of such developments, many insightful commentators have proclaimed the 21st century as the “biotechnology century.” Despite a significant literature on the morality of these particular advances in biotechnology, deeper ethical analysis has often been lacking. Our preliminary review of that literature suggested that current discussions of normative issues in biotechnology have suffered from two major deficiencies. First, the discussions have been too often piecemeal in character, limited to after-the-fact analyses of particular issues that provoked the debate, and unconnected to larger concepts and themes. Second, a crucial missing element of those discussions has been the failure to reflect explicitly on the diverse disciplinary conceptions of nature and the natural that shape moral judgments about the legitimacy of specific forms of research and their applications.

On Altering Architecture Fred Scott, 2007-12-10 Bringing together interior design and architectural theory, this exciting text looks at the common practices of building alteration, reconsidering established ideas and methods, to initiate the creation of a theory of the interior or interventional design. Fred Scott examines in-depth case studies of interventional design from architectural history across the world – examples discussed are taken from the States, Europe and Japan. Scott expands and builds on the ideas of Viollet-le-Duc, structuralism and other thoughts to layout criteria for an art of intervention and change. The book draws on the philosophy of conservation, preservation and restoration, as well as exploring related social and political issues. For those in professions of architecture and interiors, town planners, and students in architecture and art schools, On Altering Architecture forms a body of thought that can be aligned and compared with architectural theory.

Nature and Altering It Allen Verhey, 2010-11-09 In this penetrating book Allen Verhey deftly unpacks the underlying human narratives or myths through which Western culture perceives nature, and he presents the biblical narrative as an alternative story that can help shape a very different ethos for nature and altering it. Although Christian Scripture has often been accused of nurturing arrogance toward nature, Verhey looks at the Bible in a way that moves beyond those accusations and demonstrates the value of the Christian narrative for contemporary ecological ethics. Altering God's Design Abri Brancken, 2015-05-07 *Altering God's Design* by Dr. Abri Brancken (Ph.D) addresses the importance of upholding Biblical morals and ethics relating to the alteration and modification of plant, animal and human life on planet earth through the use of GRIN Technologies. Special attention is given to the ethics of creating new species of life by blending human and animal cells through genetic engineering. This book is an eye opener to those who are unaware of the fact that the very existence of humanity is under threat due to dangerous alterations that are being made to the human genetic structure in laboratories around the world. At this very moment in time a number of the GRIN Technologies are being used with the purpose to 'redesign' ourselves as humans into a new version, Humans 2.0. The truth is that we are rapidly progressing towards a New Era in the course of human history, one that might not be as perfect as we would want it to be.

The Altering Eye Robert Phillip Kolker, 2009 *The Altering Eye* covers a golden age of international cinema from the end of WWII through to the New German Cinema of the 1970s. Combining historical, political, and textual analysis, the author develops a pattern of cinematic invention and experimentation from neorealism through the

modernist interventions of Jean-Luc Godard and Rainer Maria Fassbinder, focusing along the way on such major figures as Luis Buñuel, Joseph Losey, the Brazilian director Glauber Rocha, and the work of major Cuban filmmakers. Kolker's book has become a much quoted classic in the field of film studies providing essential reading for anybody interested in understanding the history of European and international cinema. This new and revised edition includes a substantive new Preface by the author and an updated Bibliography.

Altering the Biological Blueprint Darlene R. Stille, 2011 The idea of custom-made life-forms would once have been pure science fiction. Not any more, however, thanks to genetic engineering. Genetic engineering already allows single-cell bacteria to work as drug-making factories. It has made possible new types of plants that resist diseases. It could lead to cures for cancers and other fatal illnesses. Genetic engineers work with DNA, the molecule that genes are made of. They insert new genes into animals, plants, bacteria, and other organisms. Their work, however, has raised ethical concerns. Should humans tamper with the blueprint of life? Headline Science uses news stories and everyday applications to explain the science behind genetic engineering.

The Effect of Drugs in Altering Susceptibility to Motion Sickness in Aerobatics and the Slow Rotation Room Frederick R. Deane, Charles D. Wood, Ashton Graybiel, Arthur C. Cawrse, 1966 Seven exemplary antismotion sickness drugs and three 'individually treated' placebos were investigated in ten men during twenty-four aerobic maneuvers in an A1E 'Skyraider' aircraft and in performance of the Pensacola Slow Rotation Room Dial Test. The rank order of drug effectiveness and of subject susceptibility under each condition was determined and compared. Individual difference in drug effectiveness was significant at the .01 level or better and was similar under the two conditions. Susceptibility to motion sickness in the SRR was generally a good predictor of susceptibility in aerobatics in eight subjects, but in the remaining two it was grossly in error. A combination of scopolamine and d-amphetamine was by far the most effective of the drugs tested under both conditions. (Author).

Prevention As Altering the Course of Development Jennifer L. Maggs, John E. Schulenberg, 2001-09-01 Prevention and developmental sciences have many complementary goals and much to gain by collaboration. With random assignment to conditions and long-term multivariate follow-up of individuals across significant years in the life span, fundamental basic and applied research questions can now be addressed using new statistical methods. This special issue includes four empirical papers that used growth modeling techniques (hierarchical linear modeling, latent growth curve analyses) to examine direct and indirect effects of theory-based, longitudinal prevention experiments on developmental trajectories of children's and adolescents' substance use, delinquency, and school bonding.

Altering Fate Michael Lewis, 1998-07-13 Few people question the pervasive belief that early childhood exerts an inordinate power over adult achievements, relationships, and mental health. Once robbed of our potential by the inadequacies of our upbringing, the theory goes, we risk being trapped in maladaptive patterns and unfulfilling lives. But does early experience really seal our fate? Daring to challenge prevailing models of child development,

this provocative book argues that what enables us to survive--and sets us free from our pasts--is our astonishing adaptability to change, shaped by the uniquely human attributes of consciousness, will, and desire.
