European Drug Index Niels F. Muller, Rudolf P. Dessing, 2022-03-07 Many health care providers are frequently dealing with problems related to the identification and interpretation of medicines and prescriptions of foreign origin. Health authorities, customs and travel agencies also encounter such problems, which are related to the increasing mobility of the European population. Thus the need for a European Drug Index is obvious. The EDI provides extended information for practitioners confronted with the enormous number of drug names available on the European pharmaceutical market. This market is increasing due to the rapidly changing palette of countries and economic restrictions in Europe. The listings have been derived from drug data sources from the increased number of participating countries in this second edition. Each item starts with a trade name, in alphabetical order, followed by (depending on the original source) dosage forms, strength, volume (if applicable), and generic name(s) of the active principle(s) in a random sequence. The item is concluded by the Anatomical Therapeutic Chemical (ATC) classification (when made available by the original source) and a code for the country of origin.

Managing Packaging Design for Sustainable Development Daniel Hellström, Annika Olsson, 2017-01-17 Packaging design is a powerful vehicle for making our lives friendlier, our planet greener and our businesses richer. It is an essential link between the producer and the customer, where it contributes to the positioning and presentation of a product; and on many occasions, the use of the product after purchase. What is missing is a compass that can guide practitioners in the right direction. This is particularly so in the field of packaging where the routes you take may contradict rather than contribute to sustainable development. Managing Packaging Design for Sustainable Development: A Compass for Strategic Directions emphasizes the need to rethink packaging system design, by presenting a strategic packaging design tool; a compass. The compass encourages you to go off-road, to develop and innovate, and to remake the packaging design solution that previously was best practice. Theory and practical applications are balanced by outlining the most crucial tenets of packaging design for sustainability and by illustrating wide range of real-life cases that will inspire and challenge the mindsets of those who apply the compass in packaging design related projects. This is a must-have book for designers, engineers, logisticians, marketers, supply chain professionals and other managers who seek guidance on sustainable solutions through packaging design.

Nanomedicine Michael Hehenberger, 2015-06-18 By covering the science, business, and societal impact of nanomedicine, this book makes a

strong case for funding of basic research, for effective translation of scientific breakthroughs into clinical care of patients, and for close collaboration among all stakeholders in the healthcare ecosystem. It covers the underlying science and technology of nanomedicine in detail to help understand the great promise of nanomedicine across all disease areas. Although rich and deep in content, the book attempts to introduce the topic of nanomedicine to a wide audience. Scientific jargon is avoided and advanced terms and concepts are explained from the ground up, whenever first introduced. The book defines nanomedicine in a broad sense, including diagnostic devices such as DNA sequencing and molecular imaging, and new therapeutic options based on targeted drug delivery, regenerative medicine, immunotherapeutics, the creation of implanted devices such as continuous glucose monitors and deep brain stimulators, and even the 3D printing of new human organs. It also covers the returns of investment in global scientific projects, such as the Human Genome Project, and the historic and emerging importance of philanthropic foundations.

Constructional Approaches to Nordic Languages Evie Coussé, Steffen Höder, Benjamin Lyngfelt, Julia Prentice, 2023-11-15 This volume presents eight studies of linguistic phenomena in Nordic languages (notably Danish, Norwegian, and Swedish) from a construction grammar perspective. The contributions both deepen and widen the focus of construction grammar applied to Nordic languages by dealing with a variety of topics, such as the constructional network, pseudo-coordination, additional language learning and emerging multilingualism, prototypical semantics in argument structure constructions, and domain-specific discourse and language behavior. The volume showcases the vibrant research activity within part of the construction grammar community dealing with Nordic languages, contributing to the knowledge about the structure, use and learning of these languages, as well as to the field of construction grammar as a whole.

Health Data in the Information Society György Surján, Rolf Engelbrecht, Peter McNair, 2002 MIE 2002 is the XVIIth international conference of the European Federation of Medical Informatics. Today, mankind builds up the information society, enabled by the underlying rapid development in computer technology. The significance of the spread of the internet is comparable to the significance of Gutenberg's invention. On one hand it both helps dissemination of data and knowledge and sharing of ideas. On the other hand the achievements may divide the society, as did non-literacy deprive many people from knowledge throughout centuries. Today millions of people are isolated from an incredibly large amount of information because of computer non-literacy, and a new elite mastering the information society has appeared. However, the ease of production and dissemination of information may foster thoughtless communication, and has led to a flood of information and disinformation. We have to learn how to behave in this new situation, in which the dissemination of information - at an international level - is totally uncontrolled. In the area of medical or health informatics these questions are more serious. Lack of information, false or inadequate information, as well as improper interpretation of accurate information may seriously harm patients. And the process may go out of control of the physician, i.e. patients can treat themselves just by visiting some health sites on the net. Everybody may throw a message in a bottle in information flood, and everybody may pick up messages at any time. Can we do anything to ensure that all messages are valid? Can we guarantee that our messages reach the intended audience? Can we secure that content has not changed on its way? Do we know that people getting our messages will interpret them correctly? Are we able to understand the intention of a sender, when we get a message totally out of context? These questions build up the framework of MIE2002.
