Heaven's River Dennis E. Taylor,2021-01-26 Civil war looms in the Bobiverse in this brand-new, epic-length adventure by best seller Dennis E. Taylor. More than a hundred years ago, Bender set out for the stars and was never heard from again. There has been no trace of him despite numerous searches by his clone-mates. Now Bob is determined to organize an expedition to learn Bender's fate-whatever the cost. But nothing is ever simple in the Bobiverse. Bob's descendants are out to the 24th generation now, and replicative drift has produced individuals who can barely be considered Bobs anymore. Some of them oppose Bob's plan; others have plans of their own. The out-of-control moots are the least of the Bobiverse's problems. Undaunted, Bob and his allies follow Bender's trail. But what they discover out in deep space is so unexpected and so complex that it could either save the universe-or pose an existential threat the likes of which the Bobiverse has never faced.

The Brighton School and the Birth of British Film Frank Gray,2019-07-16 This study is devoted to the work of two early British filmmakers, George Albert Smith and James Williamson, and the films that they made around 1900. Internationally, they are known collectively as the ‘Brighton School’ and are positioned as being at the forefront of Britain’s contribution to the birth of film. The book focuses on the years 1896 to 1903, as it was during this short period that film emerged as a new technology, a new enterprise and a new form of entertainment. Beginning with a historiography of the Brighton School, the study goes on to examine the arrival of the first 35mm films in Britain, the first film exhibitions in Brighton and the first projection of film in Brighton. Both Smith and Williamson’s work features a progression from the production of single shot unedited films to multi-shot edited films. Their subject matter was inspired by a knowledge of contemporary pantomime, humour, literature, theatre, mesmerism, the magic lantern and current affairs and their practices were underpinned by active involvement in the new film trade. Through the exploration of how these filmmakers cultivated a new way of understanding film and its commercial potential, this book establishes them as key figures in the development of British film culture.

Coffee R. J. Clarke,2012-12-06 The present volume, Volume 2 in this planned series on coffee, deals with processing and follows on naturally from the first volume on the chemistry of coffee, which described its numerous constituents in the green (raw) and various product forms. We have already remarked that coffee has great compositional complex ity, and this complexity of understanding extends when we come to that is, the many processes involved in the roasting consider its processing; of green coffee and its subsequent conversion into a consumable brew, especially through extraction and drying into an instant coffee. The simple brewing of roasted and ground coffee with water in the home also possesses considerable mystique and needs know-how for optimal results. The choice of green coffees from an almost bewildering array of different types available, through species/variety differences and different methods of processing from the coffee cherry to the green coffee bean, needs understanding and guidance. Furthermore, various forms of pre-treatment of green coffee before roasting are available. Some of these are little known, but others such as decaffeination, for those who desire roasted or instant coffee with little or no caffeine, are now becoming well established. Finally, both the processing of coffee cherries to coffee beans, leaving a range of different waste products (pulp, hulls, husk, parchment, etc.), and of roasted coffee after industrial aqueous extraction, leaving spent coffee grounds, provide waste products that have found considerable commercial value in different ways.

Complex Planetary Systems (IAU S310) Zoran Knežević,Anne Lemaître,2015-01-29 IAU Symposium 310 takes a broad look at the complexity of planetary systems, in terms of the formation and dynamical evolution of planets, their satellites, minor bodies and space debris, as well as to the habitability of exoplanets, in order to understand and model their physical processes. The main topics covered are diverse, including: studies of the rotation of planets and satellites, including their internal structures; the long term evolution of space debris and satellites; planetary and satellite migration mechanisms; and the role of the Yarkovsky effect on the evolution of the rotating small bodies. Intended for researchers and advanced students studying complex planetary systems, IAU S310 appeals to non-specialists interested in problems such as the habitability of exoplanets, planetary migration in the early Solar System, or the determination of chaotic orbits. This volume provides a valuable insight into the state-of-the-art research in this exciting interdisciplinary field.
