**Innovations and Approaches for Resilient and Adaptive Systems** De Florio, Vincenzo,2012-09-30 Our society continues to depend upon systems that are built in a way that they end up being inflexible and intolerant to change. Therefore there is an urgent need to investigate innovations and approaches to the management of adaptive and dependable systems. These studies are usually implemented through design, development, and the evaluation of techniques and models to structure computer systems as adaptive systems. *Innovations and Approaches for Resilient and Adaptive Systems* is a comprehensive collection of knowledge on increasing the notions and models in adaptive and dependable systems. This book aims to enhance the awareness of the role of adaptability and resilience in system environments for researchers, practitioners, educators, and professionals alike.

**Can Cars Come Clean?** ,2004-03-31 Emissions of pollutants from motor vehicles have been the focus of longstanding concerns for both governments and the public at large because of their impact on air quality and human health. More recently, emissions of greenhouse gases have been of growing concern because of their impacts on global warming. Despite the sustained increase in the number of vehicles on roads and overall distance travelled, improvements in conventional vehicle and fuel technologies over the past ten years have led to considerable reductions in emissions of local pollutants. These reductions have contributed to improvements in air quality in urban areas in most OECD countries. At the same time, CO2 emissions are continuing to increase by nearly 2% per year. What is the potential of conventional technologies (petrol and diesel) to further reduce local pollutant levels? Is it possible to reduce vehicle fuel consumption, and thereby help prevent a continuous increase in CO2 emissions? What can be expected from the use of alternative fuels (such as LPG, CNG and biofuels)? Do alternative technologies (such as full electric vehicles or hybrid vehicles) have the potential to reduce both local pollutants and global emissions, and if so, are they able to compete in the marketplace with conventional technologies? In the longer term, what can be expected from the development of fuel cell vehicles? This report provides answers to these important questions, identifies policy options and makes recommendations on actions that would promote the purchase and use of the most environmentally friendly vehicles.

It was designed as a multi-purpose vehicle and could function as an 11-man personnel carrier, reconnaissance vehicle, convoy escort, command or patrol car and a riot vehicle. The V-100 was tested and evaluated in Vietnam before full-scale production began in 1964. It saw widespread use in Vietnam by both US and South Vietnamese forces. This title describes the design, development and operational use of the V-100 Commando, including their continued deployment around the world.

**Tanks in the Easter Offensive 1972** William E. Hiestand,2022-02-17 This study explains how the armies of North and South Vietnam, newly equipped with the most modern Soviet and US tanks and weaponry, fought the decisive armored battles of the Easter Offensive. Wearied by years of fighting against Viet Cong guerillas and North Vietnamese regulars, the United States had almost completely withdrawn its forces from Vietnam by early 1972. Determined to halt the expansion and improvement of South Vietnamese forces under the U.S. "Vietnamization" program, North Vietnam launched a major fourteen-division attack in March 1972 against the South that became known as the "Easter Offensive." Hanoi's assault was spearheaded by 1,200 tanks and was counteracted on the opposite side by Saigon's newly equipped armored force using U.S. medium tanks. The result was ferocious fighting between major Cold War-era U.S. and Soviet tanks and mechanized equipment, pitting M-48 medium and M-41 light tanks against their T- 54 and PT-76 rivals in a variety of combat environments ranging from dense jungle to urban terrain. Both sides employed cutting-edge weaponry for the first time, including the U.S. TOW and Soviet 9M14 Malyutk wire-guided anti-tank missiles. This volume examines the tanks, armored forces and weapons that clashed in this little-known campaign in detail, using after-action reports from the battlefield and other primary sources to analyze the technical and organizational factors that shaped the outcome. Despite the ARVN's defensive success in October 1972, North Vietnam massively expanded its armor forces over the next two years while U.S. support waned. This imbalance with key strategic misjudgments by the South Vietnamese President led to the stunning defeat of the South in 1975 when T54 tanks crashed through the fence surrounding the Presidential palace and took Saigon on 30 April 1975.
