Biological and Clinical Landscape of Meningiomas Gelareh Zadeh,Roland Goldbrunner,Boris Krischek,Farshad Nassiri,2023-07-11

Meningiomas are tumors that originate from the arachnoidal cap cells of the leptomeninges. With an incidence rate of 8.36 per 100, 000 population, they are the most common primary central nervous system (CNS) tumors, accounting for a third of all cases. The World Health Organization (WHO) classification has traditionally categorized meningiomas into 15 different histopathological subtypes and three clinical grades. Tumors are classified as WHO grades 1, 2 or 3 based largely on histopathological features such as mitotic activity, presence of brain invasion, and other atypical features. However, there is increasing recognition of the limitations of histopathology including but not limited to: confounding factors such as sampling bias in a heterogeneous tumor, and technical factors related to the experience of the grading pathologist. Even with careful histologic grading, there remains significant variability in recurrence rates within each tumor grade. As more studies have uncovered the molecular features of meningiomas, novel biological alterations have helped refine classification schemes that more accurately reflect patient outcomes. This book reviews the current state of knowledge on the genomic and epigenomic landscape of meningiomas in order to identify the roles of genomic aberrations on diagnosis, prognosis, and treatment of meningiomas in addition to mainstays of surgical management, radiation therapy, and potential novel chemotherapies. Written by a team of world-renowned experts in neurosurgery, neuropathology, radiology, and radiation-oncology, this book is the definitive resource on meningioma management and investigation for both clinicians and scientists alike.

Architecture and Technology - ISAT 2017 Leszek Borzemski,Jerzy Świątek,Zofia Wilimowska,2017-08-31 This three-volume set of books presents advances in the development of concepts and techniques in the area of new technologies and contemporary information system architectures. It guides readers through solving specific research and analytical problems to obtain useful knowledge and business value from the data. Each chapter provides an analysis of a specific technical problem, followed by the numerical analysis, simulation and implementation of the solution to the problem. The books constitute the refereed proceedings of the 2017 38th International Conference "Information Systems Architecture and Technology," or ISAT 2017, held on September 17–19, 2017 in Szklarska Poręba, Poland. The conference was organized by the Computer Science and Management Systems Departments, Faculty of Computer Science and Management, Wrocław University of Technology, Poland. The papers have been organized into topical parts: Part I— includes discourses on topics including, but not limited to, Artificial Intelligence Methods, Knowledge Discovery and Data Mining, Big Data, Knowledge Discovery and Data Mining, Knowledge Based Management, Internet of Things, Cloud Computing and High Performance Computing, Distributed Computer Systems, Content Delivery Networks, and Service Oriented Computing. Part II—addresses topics including, but not limited to, System Modelling for Control, Recognition and Decision Support, Mathematical Modelling in Computer System Design, Service Oriented Systems and Cloud Computing and Complex Process Modeling. Part III—deals with topics including, but not limited to, Modeling of Manufacturing Processes, Modeling an Investment Decision Process, Management of Innovation, Management of Organization.

Which Degree in Britain ,1999 A comprehensive guide to full-time degree courses, institutions and towns in Britain.

Essentials of Stochastic Processes Richard Durrett,2016-11-07 Building upon the previous editions, this textbook is a first course in stochastic processes taken by undergraduate and graduate students (MS and PhD students from math, statistics, economics, computer science, engineering, and finance departments) who have had a course in probability theory. It covers Markov chains in discrete and continuous time, Poisson processes, renewal processes, martingales, and option pricing. One can only learn a subject by seeing it in action, so there are a large number of examples and more than 300 carefully chosen exercises to deepen the reader's understanding. Drawing from teaching experience and student feedback, there are many new examples and problems with solutions that use TI-83 to eliminate the tedious details of solving linear equations by hand, and the collection of exercises is much improved, with many more biological examples. Originally included in previous editions, material too advanced for this first course in stochastic processes has been eliminated while treatment of other topics useful for applications has been expanded. In addition, the ordering of topics has been improved; for example, the difficult subject of martingales is delayed until its usefulness can be applied in the treatment of mathematical finance.

A Scientific Bibliography of the Drakensberg, Maloti and Adjacent Lowlands Rodney Moffett,2021-04-19 This bibliography includes scientific articles on the Drakensberg, Maloti and Adjacent Lowlands published between 1808 and 2019. Although focusing on material appearing in accredited journals, there is such a wealth of information in the form of unpublished, yet traceable, reports, documents, presentations and dissertations, these are also included. The bibliography has two parts – a complete list arranged alphabetically, and the same references arranged in 33 different disciplines. These range from Palaeobotany with 17 entries, to Rock Art with 502 entries.

Augmented Reality, Virtual Reality, and Computer Graphics Lucio Tommaso De Paolis,Patrick Bourdot,2020-08-31 The 2-volume set LNCS 12242 and 12243 constitutes the refereed proceedings of the 7th International Conference on Augmented Reality, Virtual Reality, and Computer Graphics, AVR 2020, held in Lecce, Italy, in September 2020.* The 45 full papers and 14 short papers presented were carefully reviewed and selected from 99 submissions. The papers discuss key issues, approaches, ideas, open problems, innovative applications and trends in virtual reality, augmented reality, mixed reality, 3D reconstruction visualization, and applications in the areas of cultural heritage, medicine, education, and industry. * The conference was held virtually due to the COVID-19 pandemic.

Applied Spatial Data Analysis with R Roger S. Bivand,Edzer Pebesma,Virgilio Gómez-Rubio,2013-06-21 Applied Spatial Data Analysis with R, second edition, is divided into two basic parts, the first presenting R packages, functions, classes and methods for handling spatial data. This part is of interest to users who need to access and visualise spatial data. Data import and export for many file formats for spatial data are covered in detail, as is the interface between R and the open source GRASS GIS and the handling of spatio-temporal data. The second part showcases more specialised kinds of spatial data analysis, including spatial point pattern analysis, interpolation and geostatistics, areal data analysis and disease mapping. The coverage of methods of spatial data analysis ranges from standard techniques to new developments, and the examples used are largely taken from the spatial statistics literature. All the examples can be run using R contributed packages available from the CRAN website, with code and additional data sets from the book's own website. Compared to the first edition, the second edition covers the more systematic approach towards handling spatial data in R, as well as a number of important and widely used CRAN packages that have appeared since the first edition. This book will be of interest to

researchers who intend to use R to handle, visualise, and analyse spatial data. It will also be of interest to spatial data analysts who do not use R, but who are interested in practical aspects of implementing software for spatial data analysis. It is a suitable companion book for introductory spatial statistics courses and for applied methods courses in a wide range of subjects using spatial data, including human and physical geography, geographical information science and geoinformatics, the environmental sciences, ecology, public health and disease control, economics, public administration and political science. The book has a website where complete code examples, data sets, and other support material may be found: <http://www.asdar-book.org>. The authors have taken part in writing and maintaining software for spatial data handling and analysis with R in concert since 2003.

Cybersecurity Tugrul U Daim,Marina Dabić,2023-08-23 Cybersecurity has become a critical area to focus after recent hack attacks to key infrastructure and personal systems. This book reviews the building blocks of cybersecurity technologies and demonstrates the application of various technology intelligence methods through big data. Each chapter uses a different mining method to analyze these technologies through different kinds of data such as patents, tweets, publications, presentations, and other sources. It also analyzes cybersecurity methods in sectors such as manufacturing, energy and healthcare.
