Samuel Guye, Henri Michel

Analemmatic Sundial Sourcebook Frederick W. Sawyer,2004

Sundials Denis Savoie,2009-03-23 Sundials, which decorate church walls, public plazas, and elegant gardens, are first and foremost astronomical instruments. Before understanding how sundials work, one must first understand the apparent motion of the Sun in the sky. In this book, Denis Savoie presents the basics of astronomy required to understand sundials and describes how to design and build your own classical sundial. Written for all levels of science readers, the author shows the calculations involved in the sundial's construction and also gives a comprehensive history of time measurement. The practical and observational aspects of sundials will enable readers to create custom-made sundial of their own, adding whatever special features they wish to include. Most of these designs have been tested by people with no previous knowledge of astronomy. To aid the reader, the book is full of clear and instructive illustrations and diagrams.

Sundials Albert Waugh,2012-09-06 A rigorous appraisal of sundial science includes mathematical treatment and pertinent astronomical background, plus a nontechnical treatment so simple that several of the dials can be built by children. 106 illustrations.

Cartography by Subscription D. J. Bryden, 1979

'By the Banks of the Neva' Anthony Cross, 1997 This book offers a unique and fascinating investigation into the lives and careers of the British in eighteenth-century Russia and, more specifically, into the development of a vibrant British community in St Petersburg during the city's first century of existence as the new capital of an ever-expanding Russian empire. Based on an extremely wide use of primary sources, particularly archival, from Britain and Russia, the book concentrates on the activities of the British within various fields such as commerce, the navy, the medical profession, science and technology and the arts, and ends with a broad survey of travellers and of travel accounts, many of them completely unknown. Also included are many attractive and unusual illustrations which help demonstrate the variety and character of Russia's British community.

On Both Sides of the Strait of Gibraltar Julio Samsó, 2020-09-25 In *On Both Sides of the Strait of Gibraltar* Julio Samsó shows that astronomical sources, written in al-Andalus, the Maghrib and the Iberian Peninsula, belong to the same tradition and emphasizes the role of al-Andalus and the Iberian Peninsula in the transmission of Islamic astronomy to medieval Europe.

Irish National Inventory of Historic Scientific Instruments Charles Mollan, 1995-11-15 Carried out over a period of ten years, this is a listing of scientific instruments dating before 1920, preserved in many collections throughout the island of Ireland. It gives location, date, and description for each of the more than 5,000 entries, together, where appropriate, with relevant accompanying detail. It demonstrates clearly that Ireland has an important resource which hitherto had not been appreciated. It also preserves information about collections which have since been lost, sold, or otherwise dispersed.

The Sociology of Time Jiří Šubrt, 2021-10-26 In a critical, comparative study of the sociological literature, this book explores the term “time,” and the various interconnections between time and a broad cluster of topics that create a conceptual labyrinth. Various understandings of time manifest themselves in the context of many individual social problems—there is no single vision in sociology of how to grasp time and address within social theory. This book, therefore, attempts to define an approach to the concept of time and its associated terms (duration, temporality, acceleration, compression, temporal structures, change, historical consciousness, and others). The volume is guided by a critical engagement with three main questions: a) the formation of human understanding of time; b) the functioning of temporal structures at different levels of social reality; c) the role and place of time in general sociological theory.

Time & Space Samuel Guye, Henri Michel, 1971 Clocks are time-keepers, that is they are mechanisms which mark the length of time passed from the moment when they were set in motion. This length of time is composed of simple elements. -- Introduction.
