A Quest for Quality Wine, Every Time. Joyce Steakley, Bruce Steakley, 2020-07-31 Wine has been around for thousands of years, grape growing and wine production is worldwide, and recipes are prolific. However, this approach to winemaking root cause analysis is original and cannot be found in any other winemaking publications. The book start with the basics, with the authors' own basic winemaking steps. This provides a winemaking process and common language. With this understanding and departure point, they describe Root Cause Analysis (RCA) methods as applied to winemaking. Though winemaking appears to have simple steps, problems or flaws inevitably arise.

Instant access to online materials can provide ad-hoc answers to given conditions; however, the applicability of these solutions to one's own situation and particular conditions is not always clear. Selective changes may or may not solve the problem and in the winemaking world, it may take years to finish the wine and understand if the quality actually improved or not. A finished wine will have thousands of particular current and historical conditions that played some role in its quality. The root cause analysis (RCA) approach provides a path to sort these out and guide winemakers to the solution. It creates a problem statement and systematically divides the world into six discrete groups. This book tackles each and all of these, one group at a time. The text contains examples that prioritize the contributing factors. Observations are noted, possibilities identified, and likelihoods assessed. Actions and tests are identified to aid in assigning risk, corrective action, and preventive measures. Given limited time and resources, prioritized risks and actions improve the chance of solving the problem. The book provides problems exploring each of their respective six group characteristics. Each RCA step is described and illustrated in detail. The process is revealed and explained through multiple examples.

Feature 1: Organized systematic method for solving winemaking quality problems
Feature 2: Applicable to amateur or commercial winemakers or any other product or system development activity and organization
Feature 3: Unique new application to the wine making world but similar methods historically used in complex aerospace product

development Feature 4: Teaching winemakers and producers how to think about uncertainty and error. It's possible that gold medal wine, or 95-point Wine Spectator score, or 93-point Robert Parker score was deserved for that particular wine and vintage. But it is also possible you were very lucky. It may not be earned again in next year's vintage. This book teaches approaches and methods to maintain and or improve the quality, every year. Feature 5: Application of a potentially 'dry' rigorous root cause analysis approach in a world that enables the joy of creating and appreciating something very enjoyable. It will help you smile, at least once a year.
