Mesopotamian Chronicles Jean-Jacques Glassner, Benjamin Benjamin Read Foster, 2005 This English translation of Glassner's *Chroniques Mésopotamiennes* (Paris: Les Belles Lettres, 1993) collects all chronicle literature of ancient Mesopotamia from the early second millennium to Seleucid times. The volume, which incorporates revisions and additions by the author and a transcription of the cuneiform, includes every example of Sumerian, Assyrian, and Babylonian historiographic literature, and magisterial essays on the genre and on Mesopotamian historiography in general. Babylonian Topographical Texts A. R. George, 1992
Babylonian Topographical Texts collects for the first time all Babylonian and Assyrian texts of the first millennium B.C. that belong to what is designated the topographical genre. Much of the material is not previously published. The book is largely concerned with Babylon. Seventeen texts on this city now allow its topography to be properly understood for the first time. Another seventeen texts concern the cities of Nippur, Assur, Kish and Uruk. Also included are thirty miscellaneous texts, mostly new, which bear upon topographical matters. The text editions and translations are supplemented by a philological and topical commentary. The work is concluded with full indices, and 57 plates of cuneiform copies.

Mathematics in Ancient Iraq Eleanor Robson, 2020-06-30 This monumental book traces the origins and development of mathematics in the ancient Middle East, from its earliest beginnings in the fourth millennium BCE to the end of indigenous intellectual culture in the second century BCE when cuneiform writing was gradually abandoned. Eleanor Robson offers a history

like no other, examining ancient mathematics within its broader social, political, economic, and religious contexts, and showing that mathematics was not just an abstract discipline for elites but a key component in ordering society and understanding the world. The region of modern-day Iraq is uniquely rich in evidence for ancient mathematics because its prehistoric inhabitants wrote on clay tablets, many hundreds of thousands of which have been archaeologically excavated, deciphered, and translated. Drawing from these and a wealth of other textual and archaeological evidence, Robson gives an extraordinarily detailed picture of how mathematical ideas and practices were conceived, used, and taught during this period. She challenges the prevailing view that they were merely the simplistic precursors of classical Greek mathematics, and explains how the prevailing view came to be. Robson reveals the true sophistication and beauty of ancient Middle Eastern mathematics as it evolved over three thousand years, from the earliest beginnings of recorded accounting to complex mathematical astronomy. Every chapter provides detailed information on sources, and the book includes an appendix on all mathematical cuneiform tablets published before 2007.

Material Culture and Sacred Landscape Peter Jordan, 2003

This study provides a concrete example of how foraging societies enculturate and transform the natural environment and, through the use of material objects, create sacred spaces and sites. Using ethnographic and ethnohistorical information about the Khanty of Siberia, Jordan shows the shortcomings of both interpretive and materialist anthropological theorizing about hunters and gatherers. He focuses on the rich and complex relationship between the symbolism of the Khanty, their material culture, and the bringing of meaning to physical places. His examination looks at the topic in both historical and contemporary contexts, and in scales from the core-periphery model of Russian colonialism to the portrait of a single yurt community. Jordan's work will be of

importance to those studying cultural anthropology, archaeology, and comparative religion.

Mythology is understood here in the broad sense, including not only myths proper but also the field of ethnic religion, by including beliefs and connected rituals, magic practices and their specialists. The volumes offer information about the people in question and give reference lists for basic scientific works and archives. The central part of each volume is the dictionary of mythological terms for the tradition concerned. An index of mythical concepts is added to each volume.
