If you value your online privacy, Google is clearly not the answer. Just take a moment to think about everything that Google already knows about you. And, here's a hint - it's more than just your location and birthday. Google gathers information about you with every search you make. Which means it knows how you like your pizza and probably also your shoe size. But is there an alternative? You've probably heard it whispered about in hushed tones - the dark web. Now I'm going to let you in on a secret - you can keep your anonymity on the web. You don't have to know how to run elaborate software to delete all your tracks. All you need is a simple program. It's free, it's super-simple to install and run and you can use it today. TOR will do it all for you - it acts as an intermediary so that you don't have to divulge your personal information when you are online. And then it routes your online activity through a number of different secure nodes making it really difficult to track. Could it really be that simple? Despite what you see in the movies, yes it can. *How to Leak Documents and Surf the Web Anonymously* Nathan Bowie,2020-03-31 Every day it seems there's something new in the news regarding information or the lack thereof. Many countries are becoming more authoritarian in how they censor their society. Asking the wrong, perhaps even innocent, questions may just put you on a watch list, and you can forget about sharing details of 'wrongdoings' else face the consequences. Okay, maybe a bit hyperbolic, especially in most western nations. But hey, if Harvard and Princeton are implementing pseudonymity to discuss Chinese politics for fear of political persecution then digital anonymity might not be such a bad skill to learn.In this book you'll find 80 straightforward pages of instructions that will allow you to set up an ideally secure computer system that will then allow you to use free and open source software to access the internet and similar communications both securely and anonymously, as well as the ability to locally encrypt your data to prevent unwanted 'recoveries'. This involves regular uncensored web, email/web-based communications, phone services, file sharing, payments, and more. Instead of the usual Install Tor on your personal machine you will find on many articles and books this will delve a bit deeper and focus on more serious security. No conspiracy BS, no off the grid mentality, certainly no claims that all information should be leaked, and overall a theme of remaining ethical.

Nowadays, privacy and anonymity are mere figments of our imagination, especially when it comes to our online presence. Private browsing or going incognito has become a myth - nothing more than a thing of the past. People can still trace your IP address and identify the sites you've visited as well as your logins. And even if you have deleted all the cookies from your browser and erased your browsing history, the search engines record all your searches and even announce the number of times you've searched for a keyword. Worst, your internet provider has a tab on all your online activities. The sad truth is, once you hook up to the internet, you can be tracked - your files can be accessed, and your browsing habits can be identified and highlighted. A profile can be drawn and culled from your browsing habits and online preferences which shall serve as the basis for advertisers to bombard you with their targeted ads. You are also not safe from NSA and FBI spying, both of which have made it their sworn duty to track all surfing activities and snoop on everything everyone is doing online. Admittedly, there are some people who couldn't care less whether their online activities are being tracked or not. But, for many others who value their privacy more than anything else, this is a serious problem that needs immediate solution. The good news is, there are ways you can prevent people from prying into your online presence while keeping your activities invisible from the eyes of other people with malicious intent - including the NSA. **Practical Anonymity** Peter Loshin,2013-07-19 For those with legitimate reason to use the Internet anonymously--diplomats, military and other government agencies, journalists, political activists, IT professionals, law enforcement personnel, political refugees and others--anonymous networking provides an invaluable tool, and many good reasons that anonymity can serve a very important purpose. Anonymous use of the Internet is made difficult by the many websites that know everything about us, by the cookies and ad networks, IP-logging ISPs, even nosy officials may get involved. It is no longer possible to turn off browser cookies to be left alone in your online life. Practical Anonymity: Hiding in Plain Sight Online shows you how to use the most effective and widely-used anonymity tools--the ones that protect diplomats, military and other government agencies to become invisible online. This practical guide skips the theoretical and technical details and focuses on getting from zero to anonymous as fast as possible. For many, using any of the open-source, peer-reviewed tools for connecting to the Internet via an anonymous network may be (or seem to be) too difficult because most of the information about these tools is burdened with discussions of how they work and how to maximize security.
