**Software and Mind** Andrei Sorin,2013-01-01 Addressing general readers as well as software practitioners, *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies. Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities. But, while useful in fields like mathematics and manufacturing, this idea is generally worthless, because most aspects of the world are too complex to be reduced to simple hierarchical structures. Our software-related affairs, in particular, cannot be represented in this fashion. And yet, all programming theories and development systems, and all software applications, attempt to reduce real-world problems to neat hierarchical structures of data, operations, and features. Using Karl Popper's famous principles of demarcation between science and pseudoscience, the book shows that the mechanistic ideology has turned most of our software-related activities into pseudoscientific pursuits. Using mechanism as warrant, the software elites are promoting invalid, even fraudulent, software notions. They force us to depend on generic, inferior systems, instead of allowing us to develop software skills and to create our own systems. Software mechanism emulates the methods of manufacturing, and thereby restricts us to high levels of abstraction and simple, isolated structures. The benefits of software, however, can be attained only if we start with low-level elements and learn to create complex, interacting structures. Software, the book argues, is a non-mechanistic phenomenon. So it is akin to language, not to physical objects. Like language, it permits us to mirror the world in our minds and to communicate with it. Moreover, we increasingly depend on software in everything we do, in the same way that we depend on language. Thus, being restricted to mechanistic software is like thinking and communicating while being restricted to some ready-made sentences supplied by an elite. Ultimately, by impoverishing software, our elites are achieving what the totalitarian elite described by George Orwell in *Nineteen Eighty-Four* achieves by impoverishing language: they are degrading our minds.

**Worrorra** Mark Clendon,2014-05-12 The Kimberley Arafuran language Worrorra was spoken traditionally on the remote coastline and precipitously beautiful hinterland between the Walcott Inlet and the Prince Regent River. The language described here is that attested by its last full speakers, Patsy Lulpunda, Amy Peters and Daisy Utemorrah. Patsy Lulpunda was a child when Europeans first entered her country in 1912, and Amy Peters and Daisy Utemorrah both grew up on the Kunmunya mission. This comprehensive and detailed grammar provides as well an historical and cultural context for a society now drastically altered. In the 1950s Worrorra people left their traditional land and from the 1970s the number of people speaking Worrorra as their first language declined dramatically. Worrorra is a highly polysynthetic language, characterised by overarching concord and a high degree of morphological fusion. Verbal semantics involve a voicing opposition and an extensive system of evidentiality-marking. Worrorra has elaborate systems of pragmatic reference, a derivational morphology that projects agreement-class concord across most lexical categories and complex predicates that incorporate one verb within another. Nouns are distributed among five genders, the intensional properties of which define dynamic oppositions between men and women on the one hand, and earth and sky on the other. This volume will be of interest to morphologists, syntacticians, semanticists, anthropologists, typologists, and readers interested in Australian language and culture generally.

**Investigation and Management of Disease in Wild Animals** G.A. Wobeser,2013-04-17 - A hypothesis is a proposition, set forth as an explanation for the occurrence of a phenomenon, that can be tested. - The basis for scientific investigation is the collection of information to formulate and test hypotheses. - Experimental methods measure the effect of manipulations caused by the investigator; observational methods collect information about naturally occurring events. - There are three sub-types of experimental techniques that differ in the way subjects are chosen for inclusion in the study, in the amount of control that the investigator has over variables, and in the method used to assess changes in other variables. - Descriptive observational studies dominate the early phase of most investigations and involve the description of disease-related events in the population. Associations among factors may be observed but the strength of the associations is not measured. - Analytical observational techniques are of three basic types: prevalence surveys, case:control studies, and incidence or cohort studies. All attempt to explain the nature of relationships among various factors and to measure the strength of associations. - Prevalence surveys and case:control studies deal with disease existing at the time of the study; incidence studies are concerned with the development of disease over time. - Observational studies may be retrospective, using existing data, or prospective with collection of new information.

**Made to Matter** Fiona Probyn-Rapsey,2013 Most members of the Stolen Generations had white fathers or grandfathers. Who were these white men? This book analyses the stories of white fathers, men who were positioned as key players in the plans to assimilate Aboriginal people by 'breeding out the colour'. The plan to 'breed out the colour' ascribed enormous power to white sperm and white paternity; to 'elevate', 'uplift' and disperse Aboriginality in whiteness, to blank out, to aid cultural forgetting. The policy was a cruel failure, not least because it conflated skin colour with culture and assumed that Aboriginal women and their children would acquiesce to produce 'future whites'. It also assumed that white men would comply as ready appendages, administering 'whiteness' through marriage or white sperm. This book attempts to put textual flesh on the bodies of these white fathers, and in doing so, builds on and complicates the view of white fathers in this history, and the histories of whiteness to which they are biopolitically related.

**The Magic of Mary Cairncross** Les Hall,2019-11 In November 2019, a simply stunning new book, *The Magic of Mary Cairncross Scenic Reserve* - a celebration of Art and Nature, hit the shelves. Tim Flannery describes the book as science by stealth as it takes the reader on a journey of the Reserve through the eyes of the region's finest artists, scientists, naturalists and storytellers. This book depicts the flora, fauna and fungi of the beloved rainforest reserve and describes the fascinating diversity of the natural systems within it. What is truly unique about this beautiful hardcover publication is that it has no photographs. Instead, it is illustrated with 126 original artworks of watercolour, acrylic, oils and carvings. Sixteen renowned artists and eleven scientists have come together to offer their impressions of this diverse living botanical museum. What is even more remarkable is that the artists and scientists have made their contribution in kind: all profits from the book will support projects that benefit the Mary Cairncross Reserve. These projects will be carried out by the Friends of Mary Cairncross Assoc. This book is the brainchild of beloved local scientist and artist in his own right, Dr Les Hall AM. Sadly, Les passed away before the book was completed. Many renowned artists have contributed to the book including Jinibara Elder Noel Blair, Gubbi Gubbi Elder Lyndon Davis, and award-winning artists Jim Cox, Sally Elmer, Peter Hudson, Michael Oberhofer and many more. It also includes several artworks by the editor Dr Les Hall.

*Extinct and Vanishing Animals* Vinzenz Ziswiler,2012-12-06 In the limited scope of this book I wish to present a brief review of the progressive destruction of nature, particularly in the domain of animal life, and at the same time to illustrate some of the possibilities by which man can prevent this destruction. As the mightiest creation of nature, man extends his influence into all of nature's provinces and into all habits and zones of the earth. Civilization and technology, ultimate consequences of his unique cerebral development, have promoted man to this position of omnipotence. An enormous population increase in recent centuries has made him one of the most numerous of all animal forms. A comparison of the alarming climb of earth's population curve (Fig. 1a) with the graphical representation of exterminated animal species (Fig. 1b) establishes a striking conformity. The steeper the human population curve climbs, the higher stretch the bars representing the number of exterminated animal species.

**The Flexible Phenotype** Theunis Piersma,Jan A. van Gils,2011 In essence, the authors argue for the existence of direct, measurable, links between phenotype and ecology.

*Testosterone Rex: Myths of Sex, Science, and Society* Cordelia Fine,2017-01-24 "Beliefs about men and women are as old as humanity itself, but Fine's funny, spiky book gives reason to hope that we've heard Testosterone rex's last roar." —Annie Murphy Paul, *New York Times Book Review* Many people believe that, at its core, biological sex is a fundamental force in human development. According to this false-yet-familiar story, the

divisions between men and women are in nature alone and not part of culture. Drawing on evolutionary science, psychology, neuroscience, endocrinology, and philosophy, Testosterone Rex disproves this ingrained myth and calls for a more equal society based on both sexes' full human potential.

**The Multiple Intelligences of Reading and Writing: Making the Words Come Alive** Thomas Armstrong,2003-04-15 We normally think of reading and writing as skills that are a part of linguistic intelligence. In *The Multiple Intelligences of Reading and Writing: Making the Words Come Alive*, Thomas Armstrong shows how involving the other seven intelligences--logical-mathematical, spatial, bodily-kinesthetic, musical, interpersonal, intrapersonal, and naturalistic--will help students acquire reading and writing skills, especially those students who are not particularly strong in linguistic intelligence. *The Multiple Intelligences of Reading and Writing* appeals to all educators who work with reading and writing skills, from the preschool teacher leading the class in phonemic awareness activities to the post-graduate professor helping students examine kinesthetic imagery in Shakespeare's plays. The book combines Howard Gardner's MI theory and recent brain research on reading and writing with historical, anthropological, biographical, and psychological perspectives on literacy. Armstrong pulls the research together to show you how to engage students by infusing the study of words with imagery, logic, oral language, physical activity, emotion, music, social involvement, and nature experiences. Armstrong provides hundreds of ideas, strategies, tips, and resources for teaching everything from grammar and spelling to word decoding and reading comprehension. His strategic approach synthesizes the best reading and writing methods for application in preK-12 classrooms, literacy programs, speech and language pathology groups, one-to-one tutoring sessions, and all other settings where words are the focus of learning. Armstrong shows you how to empower your students with literacy skills for life. Note: This product listing is for the Adobe Acrobat (PDF) version of the book.

**What Is the Evidence on the Role of the Arts in Improving Health and Well-Being** Daisy Fancourt,Saoirse Finn,2019-06 Over the past two decades, there has been a major increase in research into the effects of the arts on health and well-being, alongside developments in practice and policy activities in different countries across the WHO European Region and further afield. This report synthesizes the global evidence on the role of the arts in improving health and well-being, with a specific focus on the WHO European Region. Results from over 3000 studies identified a major role for the arts in the prevention of ill health, promotion of health, and management and treatment of illness across the lifespan. The reviewed evidence included study designs such as uncontrolled pilot studies, case studies, small-scale cross-sectional surveys, nationally representative longitudinal cohort studies, community-wide ethnographies and randomized controlled trials from diverse disciplines. The beneficial impact of the arts could be furthered through acknowledging and acting on the growing evidence base; promoting arts engagement at the individual, local and national levels; and supporting cross-sectoral collaboration.

*Into That Forest* Louis Nowra,2012-09-01 From one of Australia's foremost literary talents, this is an unforgettable and heartbreaking story about two young girls living in the wild with Tasmanian Tigers.

**Word Searches For Dummies** Denise Sutherland,2009-05-11 A travel-friendly puzzle-packed book that keeps the brain in shape One of the best ways to exercise the mind is through word and logic games like word searches and Sudoku. *The Complete Guide to the Great Ocean Road* Richard Everist,2009 The Great Ocean Road region - the southwest coastline of Victoria - is simply extraordinary. This book unlocks the sights, activities and background context for visitors and locals - using maps, pictures and words. It is for everyone who is interested in exploring and learning about the region from Geelong to Portland. Sustainability depends first on knowledge, second on discerning customers and communities, and third on responsible businesses. This book features a number of businesses that are responding to the challenge, and: \* details on hundreds of accessible sights \* maps and information on over fifty sustainable activities including beach and surf guides, walking track notes, national parks and reserves and over fifty cities, towns and villages with more than sixty heritage sites. \* fascinating background context including environmental issues, Aboriginal and European heritage, geology, ecosystems, flora and fauna.

**Mystical Ennui** Doonvorcannon,2021-04-03 A book about pure being, singular will, beauty, and relating to the good in a world of seeming ugliness and mundanity, all through various connected essays and short stories.

*God is Bigger* Jess Elford,2021-01-12 *God is Bigger* is a beautifully illustrated journey that explores just how big God is in comparison to the things in our world, from an elephant to a mountain, God is bigger than it all! A simple yet powerful reminder for kids and adults alike that God is bigger than any hardships we might face in this life and that even though God is bigger than the entire universe He still sees and cares for each and every one of us.

**Habitat Fragmentation and Landscape Change** David B. Lindenmayer,Joern Fischer,2013-02-22 Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today. *Habitat Fragmentation and Landscape Change* is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change, habitat fragmentation, and biodiversity conservation. The book: synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management *Habitat Fragmentation and Landscape Change* offers a unique mix of theoretical and practical information, outlining general principles and approaches and illustrating those principles with case studies from around the world. It represents a definitive overview and synthesis on the full range of topics that fall under the widely used but often vaguely defined term habitat fragmentation.

*Choosing Sexes* Kristen J. Navara,2018-02-01 There is extensive evidence that vertebrates of all classes have the ability to control the sexes of the offspring they produce. Despite dramatic differences in the mechanisms by which different taxa determine the initial sex of offspring, each group has found its own way of adjusting offspring sex ratios in response to social and environmental cues. For example, stress is a well-known modulator of offspring sex in members of all groups studied to date. Food availability, and limitation in particular, is another common cue that stimulates biases in offspring sex ratios in a wide variety of species. Offspring sex can be adjusted at the primary level, which occurs prior to conception, or at the secondary level, during embryonic development. While the mechanistic pathways that ultimately result in sex ratio biases and the developmental time-points sensitive to those mechanisms likely differ among taxa, the key involvement of steroid hormones in the process of sex ratio adjustment appears to be pervasive throughout. This book reviews the systems of sex determination at play in different vertebrate groups, summarizes the evidence that members of all vertebrate taxa can facultatively adjust offspring sex, and discusses when and how these adjustments can take place.
