Advances in Computers Marvin Zelkowitz, 2011-08-09 This is volume 74 of *Advances in Computers*, subtitled "Recent advances in software development. This series, which began in 1960, is the oldest continuously published series of books that has chronicled the ever- changing landscape of information technology. Each year three volumes are published, each presenting five to seven chapters describing the latest technology in the use of computers

today. In this current volume, we present six chapters that give an update on some of the major issues affecting the development of software today. The six chapters in this volume can be divided into two general categories. The first three deal with the increasing importance of security in the software we write and provide insights into how to increase that security. The three latter chapters look at software development as a whole and provide guidelines in how best to make certain decisions on a project-level basis. The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume as well as belonging on the bookshelf of industrial practitioners who need to implement many of the technologies that are described.

Legal Aspects of an E-commerce Transaction Andrea Schulz (Ph.D.), 2006 The contributions contained in these conference proceedings illustrate how the existing and future regulatory framework operates for online business transactions. Legal Aspects of an E-Commerce Transaction examines various national and international laws and treaties as well as European Community law. The book looks at self-regulatory codes of conduct elaborated by business organizations relating to advertising, spam, competition, and the use of intellectual property rights, to

the conclusion of online contracts and their performance. Additionally, post-contractual issues, dispute resolution, and taxation are discussed, and their interaction is examined. Rules on electronic payment, electronic invoicing, and the taxation of electronic business transactions are equally addressed.

Email Spam Filtering Gordon V. Cormack, 2008 Email Spam Filtering: A Systematic Review surveys current and proposed spam filtering techniques with particular emphasis on how well they work. The primary focus is on spam filtering in email, while similarities and differences with spam filtering in other communication and storage media - such as instant messaging and the Web - are addressed peripherally. Email Spam Filtering: A Systematic Review examines the definition of spam, the user's information requirements and the role of the spam filter as one component of a large and complex information universe. Well known methods are detailed sufficiently to make the exposition self-contained; however, the focus is on considerations unique to spam. Comparisons, wherever possible, use common evaluation measures and control for differences in experimental setup. Such comparisons are not easy, as benchmarks, measures and methods for evaluating spam filters are still evolving. The author surveys these efforts, their results and their limitations. In spite of recent advances in evaluation methodology, many uncertainties (including widely held but unsubstantiated beliefs) remain as to the effectiveness of spam filtering techniques and as to the validity of spam filter evaluation methods. Email Spam Filtering: A Systematic Review outlines several uncertainties and proposes experimental methods to address them. Email Spam Filtering: A Systematic Review is a highly recommended read for anyone conducting research in the area or charged with controlling spam in a corporate environment.
