OpenCV 3 Blueprints Joseph Howse, Steven Puttemans, Quan Hua, Utkarsh Sinha, 2015-11-10 Expand your knowledge of computer vision by building amazing projects with OpenCV 3 About This Book Build computer vision projects to capture high-quality image data, detect and track objects, process the actions of humans or animals, and much more Discover practical and interesting innovations in computer vision while building atop a mature open-source library, OpenCV 3 Familiarize yourself with multiple approaches and theories wherever critical decisions need to be made Who This Book Is For This book is ideal for you if you aspire to build computer vision systems that are smarter, faster, more complex, and more practical than the competition. This is an

advanced book intended for those who already have some experience in setting up an OpenCV development environment and building applications with OpenCV. You should be comfortable with computer vision concepts, object-oriented programming, graphics programming, IDEs, and the command line. What You Will Learn Select and configure camera systems to see invisible light, fast motion, and distant objects Build a “camera trap”, as used by nature photographers, and process photos to create beautiful effects Develop a facial expression recognition system with various feature extraction techniques and machine learning methods Build a panorama Android application using the OpenCV stitching module in C++ with NDK support Optimize your object detection model, make it rotation invariant, and apply scene-specific constraints to make it faster and more robust Create a person identification and registration system based on biometric properties of that person, such as their fingerprint, iris, and face Fuse data from videos and gyroscopes to stabilize videos shot from your mobile phone and create hyperlapse style videos In Detail Computer vision is becoming accessible to a large audience of software developers who can leverage mature libraries such as OpenCV. However, as they move beyond their first experiments in computer vision, developers may struggle to ensure that their solutions are sufficiently well optimized, well trained, robust, and adaptive in real-world conditions. With sufficient knowledge of OpenCV, these developers will have enough confidence to go about creating projects in the field of computer vision. This book will help you tackle increasingly challenging computer vision problems that you may face in your careers. It makes use of OpenCV 3 to work around some interesting projects. Inside these pages, you will find practical and innovative approaches that are battle-tested in the authors' industry experience and research. Each chapter covers the theory and practice of multiple complementary approaches so that you will be able to choose wisely in your future projects. You will also gain insights into the

architecture and algorithms that underpin OpenCV's functionality. We begin by taking a critical look at inputs in order to decide which kinds of light, cameras, lenses, and image formats are best suited to a given purpose. We proceed to consider the finer aspects of computational photography as we build an automated camera to assist nature photographers. You will gain a deep understanding of some of the most widely applicable and reliable techniques in object detection, feature selection, tracking, and even biometric recognition. We will also build Android projects in which we explore the complexities of camera motion: first in panoramic image stitching and then in video stabilization. By the end of the book, you will have a much richer understanding of imaging, motion, machine learning, and the architecture of computer vision libraries and applications! Style and approach This book covers a combination of theory and practice. We examine blueprints for specific projects and discuss the principles behind these blueprints, in detail.

Narratives of the War on Terror Michael C. Frank,Pavan Kumar Malreddy,2020-09-10 Challenging the predominantly Euro-American approaches to the field, this volume brings together essays on a wide array of literary, filmic and journalistic responses to the decade-long wars in Afghanistan and Iraq. Shifting the focus from so-called 9/11 literature to narratives of the war on terror, and from the transatlantic world to Iraq, Syria, Afghanistan, the Afghan-Pak border region, South Waziristan, Al-Andalus and Kenya, the book captures the multiple transnational reverberations of the discourses on terrorism, counter-terrorism and insurgency. These include, but are not restricted to, the realignment of geopolitical power relations; the formation of new terrorist networks (ISIS) and regional alliances (Iraq/Syria); the growing number of terrorist incidents in the West; the changing discourses on security and technologies of warfare; and the

leveraging of fundamental constitutional principles. The essays featured in this volume draw upon, and critically engage with, the conceptual trajectories within American literary debates, postcolonial discourse and transatlantic literary criticism. Collectively, they move away from the trauma-centrism and residual US-centrism of early literary responses to 9/11 and the criticism thereon, while responding to postcolonial theory's call for a historical foregrounding of terrorism, insurgency and armed violence in the colonial-imperial power nexus. This book was originally published as a special issue of the European Journal of English Studies.

Brown, 1995-10-19 Volume 36 examines timely subjects such as multilinear regression, canonical correlation, and factor and principal component methods of analysis in the evaluation of retention data matrices, molecular recognition mechanisms in the liquid chromatographic separation of fullerenes, the latest techniques in the use of capillary electrophoresis and mass spectrometry for sequencing antisense oligonucleotides, and more.

Diplomacy and War at NATO Ryan C. Hendrickson, 2006 NATO is an alliance transformed. Originally created to confront Soviet aggression, the North Atlantic Treaty Organization evolved in the 1990s as a military alliance with a broader agenda. Whether conducting combat operations in the Balkans or defending Turkey from an Iraqi threat in 2003, NATO continues to face new security challenges on several fronts. Although a number of studies have

addressed NATO's historic evolution, conceptual changes, and military activities, none has considered the role in this transformation of the secretary general, who is most often seen as a minor player operating under severe political constraints. In *Diplomacy and War at NATO*, Ryan C. Hendrickson examines the first four post-Cold War secretaries general and establishes their roles in moving the alliance toward military action. Drawing on interviews with former NATO ambassadors, alliance military leaders, and senior NATO officials, Hendrickson shows that these leaders played critical roles when military force was used and were often instrumental in promoting transatlantic consensus. Hendrickson offers a focus on actual diplomacy within NATO unmatched by any other study, providing previously unreported accounts of closed sessions of the North Atlantic Council to show how these four leaders differed in their impacts on the alliance but were all critical players in explaining how and when NATO used force. He examines Manfred Wörner's role in moving the alliance toward military action in the Balkans; Willy Claes's influence in shaping alliance policies regarding NATO's 1995 bombing campaign on the Bosnian Serbs; Javier Solana's part in shaping political and military agendas in the Yugoslavian war; and George Robertson's efforts to promote consensus on the Iraqi issue, which culminated in NATO's decision to provide Turkey with military defensive measures. Through each case, Hendrickson demonstrates that the secretary general is often the central diplomat in generating cooperation within NATO. As the alliance has expanded its membership and undertaken new peacekeeping missions, it now confronts new threats in international security. *Diplomacy and War at NATO* offers readers a more complete understanding of the alliance's post-Cold War transformation as well as policy recommendations for the improvement of transatlantic tensions.

The Chemistry of Superheavy Elements Matthias Schädel, 2007-05-08 This book is the first to treat the chemistry of

superheavy elements, including important related nuclear aspects, as a self contained topic. It is written for those – students and novices -- who begin to work and those who are working in this fascinating and challenging field of the heaviest and superheavy elements, for their lecturers, their advisers and for the practicing scientists in the field – chemists and physicists - as the most complete source of reference about our today's knowledge of the chemistry of transactinides and superheavy elements. However, besides a number of very detailed discussions for the experts this book shall also provide interesting and easy to read material for teachers who are interested in this subject, for those chemists and physicists who are not experts in the field and for our interested fellow scientists in adjacent fields. Special emphasis is laid on an extensive coverage of the original literature in the reference part of each of the eight chapters to facilitate further and deeper studies of specific aspects. The index for each chapter should provide help to easily find a desired topic and to use this book as a convenient source to get fast access to a desired topic. Superheavy elements – chemical elements which are much heavier than those which we know of from our daily life – are a persistent dream in human minds and the kernel of science fiction literature for about a century.

Buildings for Education Stefano Della Torre, Massimiliano Bocciarelli, Laura Daglio, Raffaella Neri, 2019-01-01 This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community. Innovations in both design and

construction processes are then analyzed, paying special attention to the Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

Iraq and Back Kim Olson, 2006 This firsthand account of what went wrong is seen from Olson's unique point of view as a senior officer, pilot, wife, and mother. Many of the stories she tells are known to only the handful of people involved, including the details of early meetings with tribal leaders to discuss building a coalition government - an effort quashed by Garner's successor.--Jacket.
