Uremic Toxins Severin Ringoir,Raymond Vanholder,Shaul G. Massry,2012-12-06 The present book contains the Proceedings of a two day Symposium on Uremic Toxins organized at the University of Ghent in Belgium. A series of guest lectures, free communications and posters have been presented. An international audience of 163 scientists from 16 nationalities listened to and discussed extensively a spectrum of topics brought forward by colleagues and researchers who worked for many years in the field of Uremic Toxins. There is a striking contrast between all the new dialysis strategies available in the work to clean the uremic patients and the almost non-progression of our knowledge on uremic toxins in the past decade. In this sense the symposium was felt by all participants as a new start for the research in the biochemical field of the definition of uremia. If the present volume would stimulate new work in this field in order to define uremia, or identify the uremic toxins, the purpose of the organizers would be maximally fulfilled.

Melatonin, Neuroprotective Agents and Antidepressant Therapy Francisco López-Muñoz,Venkataramanujam Srinivasan,Domenico de Berardis,Cecilio Álamo,Takahiro A. Kato,2016-11-16 This work is a guidebook for clinicians who are involved in treating depressive patients and also serves the research scientists who are working on the psychopharmacological mechanisms of antidepressant actions and psychopathological mechanisms underlying mood disorders. Mood disorders such as major depressive disorder (MDD), bipolar disorder (BPD) and seasonal affective disorder (SAD) are the most disabling disorders that are among the most expensive of all medical illnesses. The pathophysiology of mood disorders is very complex and involves many mechanisms like circadian rhythm disruption, sleep abnormalities, melatonin rhythm abnormalities and alterations in melatonin receptor mechanisms, abnormalities in monoaminergic neurotransmitter mechanisms, glutamatergic release mechanisms, hippocampal neurogenesis, and abnormal immune and cytokine release mechanisms. Many antidepressants that are in clinical use today including the recently introduced novel agents like agomelatine or other antidepressants cause clinical remission by resynchronizing disrupted circadian rhythms and melatonin receptor functions, enhancing monoaminergic neurotransmission, promoting hippocampal neurogenesis, and regulating immune mechanisms. This book explains various etiological factors that are involved in the pathogenesis of mood disorders and the mechanisms of therapeutic actions of antidepressants including the recently introduced agomelatine and other antidepressants that exhibit rapid onset of action with greater efficacy and fewer side effects. .

Opioid Dependence Heath B. McAnally,2017-10-07 The book begins with a public health/epidemiologic examination of the situation, with a systematic view of the problem based on classic (infectious disease) epidemiologic principles applied to this behavioral health issue. This application is expanded to take into account the fact that unlike most epidemics in our species' history, a unique factor that must be accounted for in any public health analysis is that the host (opioid-dependent/misusing patient) is generally not under sufficiently strong motivation to avoid the disease. The introduction concludes with a survey of recent containment approaches, categorized epidemiologically by target (agent, vector, host.) The remainder of the book is organized according to this framework, addressing agent, vector/transmission and host, respectively. Sections Three and Four comprise the major focus of the book, and are dedicated primarily to practical education for primary care providers in preventing opioid use disorder, and overcoming it after the fact.
