Images of the Divine: The Theology of Icons at the Seventh Ecumenical Council - Revised Edition Ambrosios Giakalis, 2005-08-01 This book, newly revised and updated, examines the Eastern Church's theology of icons chiefly on the basis of the acts of the Seventh Ecumenical Council of 787. The political circumstances leading to the outbreak of the iconoclast controversy in the eighth

century are discussed in detail, but the main emphasis is on the theological arguments and assumptions of the council participants. Major themes include the nature of tradition, the relationship between image and reality, and the place of christology. Ultimately the argument over icons was about the accessibility of the divine. Icons were held by the iconophiles to communicate a deifying grace which raised the believer to participation in the life of God.

Exploring Church History Derek Cooper, 2014 Cooper invites readers to consider the significance of church history in the lives of individuals and communities today. Icons M. R. Powers, 2002-12-01 What is the strange power of Sofia's icon? . . . his eyes passed over Sofia's icon, and he again was surprised by the brilliance of its colors. Picking the object up, he observed that, in addition to its unusual glow, there was now an even stranger visual effect: all four of the icon's borders had begun to shimmer like a fluid, moving slightly to and fro in violation of its rectangular form. Oddly, when he focused on any one of the edges, he found that it quickly became stable and ordinary, while the remaining edges continued to move in the periphery. George was about to put the icon back on his desk when he noticed that it possessed a strong and beautiful fragrance, reminiscent of cedar. Although he couldn't identify the odor, he knew he had smelled it before, long ago. It was the type of smell that brought back memories—not memories of specific events, but rather vague memories of feelings that hadn't been experienced in a long time. He placed the icon on his desk, but continued trying to identify the smell and the memories it evoked. Sitting back in his chair, he closed his eyes.

Model Driven Engineering Languages and Systems Dorina C. Petriu, Nicolas Rouquette, Øystein Haugen, 2010-09-21 The MODELS series of conferences is the premier venue for the exchange of -novative technical ideas and experiences focusing on a very important new te-

nical discipline: model-driven software and systems engineering. The expansion of this discipline is a direct consequence of the increasing significance and success of model-based methods in practice. Numerous efforts resulted in the invention of concepts, languages and tools for the definition, analysis, transformation, and verification of domain-specific modeling languages and general-purpose modeling language standards, as well as their use for software and systems engineering. MODELS 2010, the 13th edition of the conference series, took place in Oslo, Norway, October 3-8, 2010, along with numerous satellite workshops, symposia and tutorials. The conference was fortunate to have three prominent keynote speakers: Ole Lehrmann Madsen (Aarhus University, Denmark), Edward A. Lee (UC Berkeley, USA) and Pamela Zave (AT&T Laboratories, USA). To provide a broader forum for reporting on scientific progress as well as on experience stemming from practical applications of model-based methods, the 2010 conference accepted submissions in two distinct tracks: Foundations and Applications. The primary objective of the first track is to present new research results dedicated to advancing the state-of-the-art of the discipline, whereas the second aims to provide a realistic and verifiable picture of the current state-- the practice of model-based engineering, so that the broader community could be better informed of the capabilities and successes of this relatively young discipline. This volume contains the final version of the papers accepted for presentation at the conference from both tracks.
