**Speech Enhancement** Shoji Makino, Jingdong Chen, 2005-03-17 We live in a noisy world! In all applications (telecommunications, hands-free communications, recording, human-machine interfaces, etc) that require at least one microphone, the signal of interest is usually contaminated by noise and reverberation. As a result, the microphone signal has to be cleaned with digital signal processing tools before it is played out, transmitted, or stored. This book is about speech enhancement. Different well-known and state-of-the-art methods for noise reduction, with one or

multiple microphones, are discussed. By speech enhancement, we mean not only noise reduction but also dereverberation and separation of independent signals. These topics are also covered in this book. However, the general emphasis is on noise reduction because of the large number of applications that can benefit from this technology. The goal of this book is to provide a strong reference for researchers, engineers, and graduate students who are interested in the problem of signal and speech enhancement. To do so, we invited well-known experts to contribute chapters covering the state of the art in this focused field.

*Frontier Computing* Jason C. Hung, Neil Y. Yen, Jia-Wei Chang, 2020-02-25 This book gathers the proceedings of the 9th International Conference on Frontier Computing, held in Kyushu, Japan on July 9-12, 2019, and provides comprehensive coverage of the latest advances and trends in information technology, science and engineering. It addresses a number of broad themes, including communication networks, business intelligence and knowledge management, web intelligence, and related fields that inspire the development of information technology. The respective contributions cover a wide range of topics: database and data mining, networking and communications, web and internet of things, embedded systems, soft computing, social network analysis, security and privacy, optical communication, and ubiquitous/pervasive computing. Many of the papers outline promising future research directions, and the book will benefit students, researchers and professionals alike. Further, it offers a useful reference guide for newcomers to the field.

**Google and the Culture of Search** Ken Hillis, Michael Petit, Kylie Jarrett, 2013 Google and the Culture of Search examines the role of search technologies in shaping the contemporary digital and informational landscape. Ken Hillis and Michael Petit shed light on a culture of search in which our increasing reliance on search engines like Google, Yahoo! and Bing influences the way we navigate

Web content--and how we think about ourselves and the world around us, online and off. Even as it becomes the number one internet activity, the very ubiquity of search technology naturalizes it as utilitarian and transparent--an assumption that Hillis and Petit explode in this innovative study. Commercial search engines supply an infrastructure that impacts the way we locate, prioritize, classify, and archive information on the Web, and as these search functionalities continue to make their way into our lives through mobile, GPS-based platforms and personalized results, distinctions between the virtual and the real collapse. Google--a multibillion-dollar global corporation--holds the balance of power among search providers, and the biases and individuating tendencies of its search algorithm undeniably shape our collective experience of the internet and our assumptions about the location and value of information. Google and the Culture of Search explores what is at stake for an increasingly networked culture in which search technology is a site of knowledge and power. This comprehensive study of search technology's broader implications for knowledge production and social relations is an indispensable resource for students and scholars of Internet and new media studies, the digital humanities, and information technology--

**In League with a UFO** Lou Baldin, 2009-03 The Alien ship recovered in Roswell, New Mexico in 1947, was filled with Alien gadgetry. The gadgetry or spawn, as some of the covert operators called the Alien things, infested the crashed flying saucer. The Alien spawn had magical and bizarre qualities with eVietnamesel tendencies. The gadgets served as tools and medical instruments and seemingly possessed personalities of their own. In their attempts to better understand the extraterrestrial menace Vietnamesesiting Earth, the covert committee performed extensive experiments on humans using the Alien gadgets.

The VR Book Jason Jerald, 2015-09-01 Virtual reality (VR) potentially provides our minds with

direct access to digital media in a way that at first seems to have no limits. However, creating compelling VR experiences is an incredibly complex challenge. When VR is done well, the results are brilliant and pleasurable experiences that go beyond what we can do in the real world. When VR is done badly, not only is the system frustrating to use, but sickness can result. Reasons for bad VR are numerous; some failures come from the limitations of technology, but many come from a lack of understanding perception, interaction, design principles, and real users. This book discusses such issues, focusing upon the human element of VR rather than technical implementation, for if we do not get the human element correct, then no amount of technology will make VR anything more than an interesting tool confined to research laboratories. Even when VR principles are fully understood, first implementations are rarely novel and never ideal due to the complex nature of VR and the countless possibilities. However, the VR principles discussed within enable us to intelligently experiment with the rules and iteratively design towards innovative experiences.

Homeless Heritage Rachael Kiddey, 2017 Homeless Heritage describes the process of using archaeological methodologies to collaboratively document how contemporary homeless people use and experience the city. Drawing on fieldwork undertaken in Bristol and York, the book first describes the way in which archaeological methods and theory have come to be usefully applied to the contemporary world, before exploring the historical development of the concept of homelessness. Working with homeless people, the author undertook surveys and two excavations of

contemporary homeless sites, and the team co-curated two public heritage exhibitions - with surprising results. Complementing a growing body of literature that details how collaborative and participatory heritage projects can give voice to marginalised groups, Homeless Heritage details what it means to be homeless in twenty-

**Archaeogaming** Andrew Reinhard, 2018-06-18 Video games exemplify contemporary material objects, resources, and spaces that people use to define their culture. Video games also serve as archaeological sites in the traditional sense as a place, in which evidence of past activity is preserved and has been, or may be, investigated using the discipline of archaeology, and which represents a part of the archaeological record. This book serves as a general introduction to archaeogaming; it describes the intersection of archaeology and video games and applies archaeological method and theory into understanding game-spaces as both site and artifact.

**100 Words To Make You Sound Smart** American Heritage Dictionaries, 2006-10-04 Find the right words to make a point, seal the deal, or just keep folks listening! Chosen by the editors of the American Heritage Dictionaries, these words can help anyone who wants to be a more compelling communicator—as a worker, consumer, advocate, friend, dinner companion, or even romantic prospect. The book includes a colorful variety of words, including handy words of just one syllable (such as glib) and words derived from the names of famous people (such as Freudian slip and Machiavellian). There are expressions from popular culture (Catch-22) and words that date back to

classical civilization (spartan and stoic). Each word is clearly defined and shown in context with quotations from magazines, newspapers, broadcast media, movies, and television. For many words, quotations from distinguished authors and speakers are also given and word histories are explained. 100 Words to Make You Sound Smart provides an enjoyable way to communicate more effectively, distinctively, and articulately.

**The Digital Shift** Christian von Reventlow ,Philipp Thesen,2019-02-26 The Digital Shift is changing the world as we know it. The rise of Artificial Intelligence will create new business models, products and services - and ultimately change the way we live our lives. But in order to establish a new global prosperity paradigm, industry must finally start thinking radically from a human perspective. Currently a tool used only by the elite, Artificial Intelligence must become a tool for everyone. It must become personalised and transition to what we call Personal Intelligence. How? Predominantly through the discipline of design. In this fascinating book, Christian von Reventlow and Philipp Thesen have developed a series of radically new human-centric, design-led methods and models that will help corporations adjust to this new personalised technology and the increasingly digitised future.

The information is eye and mind opening and filled with the realities that intelligent life on earth is simply one planet out of billions that exist in the Milky Way galaxy, which is teeming with similar and much more exotic, super being, type life forms.
