Tissue Culture Techniques for Horticultural Crops Kenneth C.

Torres, 2012-12-06 This book was written for those individuals who are concerned about the techniques and practices of plant cell cultures for horticultural crops. It was designed to serve as a text and reference for students and professionals in ornamental horticulture, fruit and vegetable crop production, botany, forestry, and other areas of plant science. Research during the last twenty-five years in the area of plant tissue culture has led to many developments and changes in this field. Although the techniques involved in the manipulation of plant tissue culture are now relatively straightforward, the presentation of these techniques in a short volume for the beginner in the field is generally unavailable. In addition to describing the techniques for establishment and manipulation of specific species, several chapters in this book also provide a brief, general review of important cultural parameters. Specific protocols and laboratory procedures may also be found in the appendix. I hope that this presentation of information will be helpful to those individuals wanting to apply plant tissue culture techniques for horticultural crops.

Priests and Cults in the Book of the Twelve Lena-Sofia Tiemeyer, 2016 This book discusses the depictions of the cult and its personnel in the twelve prophetic books commonly referred to as The Book of the Twelve or The Minor Prophets. The articles in the volume explore the following questions: How did these prophetic writers envision the priests and the Levites? What did they think about the ritual aspects of ancient Israelite faith, including not only the official temple cult in Jerusalem but also cultic expressions outside the capital? What, in their views, characterized a faithful priest and what should the relationship be between his cultic performance and the ways in which he lived his life? How does the message of each individual author fit in with the wider Israelite traditions? Finally, who were these prophetic authors, in which historical contexts did they live and work, and what stylistic tools did they use to communicate their message?

Yeast technology Gerald Reed, 2012-12-06 Yeasts are the active agents responsible for three of our most important foods - bread, wine, and beer - and for the almost universally used mind/ personality-altering drug, ethanol. Anthropologists have suggested that it was the production of ethanol that motivated primitive people to settle down and become farmers. The Earth is thought to be about 4.5 billion years old. Fossil microorganisms have been found in Earth rock 3.3 to 3.5 billion years old. Microbes have been on Earth for that length of time carrying out their principal task of recycling organic matter as they still do today. Yeasts have most likely been on Earth for at least 2 billion years before humans arrived, and they play a key role in the conversion of sugars to alcohol and carbon dioxide. Early humans had no concept of either microorganisms or fermentation, yet the earliest historical records indicate that by 6000 B. C. they knew how to make bread, beer, and wine. Earliest humans were foragers who collected and ate leaves, tubers, fruits, berries, nuts, and cereal seeds most of the day much as apes do today in the wild. Crushed fruits readily undergo natural fermentation by indigenous yeasts, and moist seeds germinate and develop amylases that produce fermentable sugars. Honey, the first concentrated sweet known to humans, also spontaneously ferments to alcohol if it is by chance diluted with rainwater. Thus, yeasts and other microbes have had a long history of 2 to 3.
