Game Industry: Vývoj počítačových her a kapitoly z herního průmyslu ,2011

Game Writing Chris Bateman,2021-01-28 As the videogame industry has grown up, the need for better stories and characters has dramatically increased, yet traditional screenwriting techniques alone cannot equip writers for the unique challenges of writing stories where the actions and decisions of a diverse range of players are at the centre of every narrative experience. Game Writing: Narrative Skills for Videogames was the first book to demystify the emerging field of game writing by identifying and explaining the skills required for creating videogame narrative. Through the insights and experiences of professional game writers, this revised edition captures a snapshot of the narrative skills employed in today's game industry and presents them as practical articles accompanied by exercises for developing the skills discussed. The book carefully explains the foundations of the craft of game writing, detailing all aspects of the process from the basics of narrative to guiding the player and the challenges of nonlinear storytelling. Throughout the book there is a strong emphasis on the skills developers and publishers expect game writers to know. This second edition brings the material up to date and adds four new chapters covering MMOs, script formats, narrative design for urban games, and new ways to think about videogame narrative as an art form. Suitable for both beginners and experienced writers, Game Writing is the essential guide to all the techniques of game writing. There's no better starting point for someone wishing to get into this exciting field, whether they are new game writers wishing to hone their skills, or screenwriters hoping to transfer their skills to the games industry.

Chaos Ethics Chris Bateman,2014-09-26 Balance has no meaning for a politics that is merely the continuation of war by other means. Both religious zealots and defenders of scientific fact declare a monopoly on truth and the moral law, while radicals are powerless to resist since they have lost faith that ethics can be anything but arbitrary. Meanwhile, insane bureaucracy devastates life while nations fall into dishonor as they abandon their promises of justice. If the moral law cannot save us, perhaps it is time to try moral chaos. Chaos Ethics collides philosophers such as Kant, Nietzsche, Levinas, Mary Midgley, Alasdair MacIntyre, Alain Badiou, Isabelle Stengers, and Bruno Latour with everything from cyberpunk science fiction and the fantasy novels of Michael Moorcock to Google, gay marriage, drone assassinations, and the ethics of cats and dogs. A strange and wondrous journey through morality viewed as a facet of imagination that offers a new perspective in which the diversity of ethics is a strength not a weakness, hesitation is more noble than certainty, and virtue can be expressed in both law and chaos.

The Mythology of Evolution Chris Bateman,2012-09-16 This book liberates evolution from misrepresentative scientific myths to find a more nuanced vision of life that shows how advantages persist, trust is beneficial, and the diversity of species emerges.

Bioethics in the Age of New Media Joanna

Zylinska,2009-03-20 An examination of ethical challenges that technology presents to the allegedly sacrosanct idea of the human and a proposal for a new ethics of life rooted in the philosophy of alterity. Bioethical dilemmas—including those over genetic screening, compulsory vaccination, and abortion—have been the subject of ongoing debates in the media, among the public, and in professional and academic communities. But the paramount bioethical issue in an age of digital technology and new media, Joanna Zylinska argues, is the transformation of the very notion of life. In this provocative book, Zylinska examines many of the ethical challenges that technology poses to the allegedly sacrosanct idea of the human. In doing so, she goes beyond the traditional understanding of bioethics as a matter for moral philosophy and medicine to propose a new “ethics of life” rooted in the relationship between the human and the nonhuman (both animals and machines) that new technology prompts us to develop. After a detailed discussion of the classical theoretical perspectives on bioethics, Zylinska describes three cases of “bioethics in action,” through which the concepts of “the human,”

“animal,” and “life” are being redefined: the reconfiguration of bodily identity by plastic surgery in a TV makeover show; the reduction of the body to two-dimensional genetic code; and the use of biological material in such examples of “bioart” as Eduardo Kac's infamous fluorescent green bunny. Zylinska addresses ethics from the interdisciplinary perspective of media and cultural studies, drawing on the writings of thinkers from Agamben and Foucault to Haraway and Hayles. Taking theoretical inspiration in particular from the philosophy of alterity as developed by Jacques Derrida, Emmanuel Levinas, and Bernard Stiegler, Zylinska makes the case for a new nonsystemic, nonhierarchical bioethics that encompasses the kinship of humans, animals, and machines.
