The Australian Indigenous context presents unique challenges for educators working across the continent in settings ranging from urban to remote, and with various social and language groups. Accordingly, one of the book's main goals is to foster dialogue between researchers and practitioners working in these contexts, and who have vastly different theoretical and ideological perspectives. It offers a valuable resource for academics and teachers of Indigenous students who are interested in literacy-focused research, and complements scholarship on literacy education in comparable Indigenous settings internationally.

New Directions in Colour Studies Carole P. Biggam,Carole A. Hough,Christian J. Kay,David R. Simmons,2011-10-20 Colour studies attracts an increasingly wide range of scholars from across the academic world. Contributions to the present volume offer a broad perspective on the field, ranging from studies of individual languages through papers on art, architecture and heraldry to psychological examinations of aspects of colour categorization, perception and preference. The chapters have been developed from papers and posters presented at a conference on Progress in Colour Studies (PICS08) held at the University of Glasgow. The volume both updates research reported at the earlier PICS04 conference (published by Benjamins in 2006 as Progress in Colour Studies volumes 1 and 2), and introduces new and exciting topics and developments in colour research. In order to make the articles maximally accessible to a multidisciplinary readership, each of the six sections following the initial theoretical papers begins with a short preface describing and drawing together the themes of the chapters within that section. There are seventeen colour illustrations.

Twenty Lectures on Algorithmic Game Theory Tim Roughgarden, 2016-08-30 Computer science and economics have engaged in a lively interaction over the past fifteen years, resulting in the new field of algorithmic game theory. Many problems that are central to modern computer science, ranging from resource allocation in large networks to online advertising, involve interactions between multiple self-interested parties. Economics and game theory offer a host of useful models and definitions to reason about such problems. The flow of ideas also travels in the other direction, and concepts from computer science are increasingly important in economics. This book grew out of the author's Stanford University course on algorithmic game theory, and aims to give students and other newcomers a quick and accessible introduction to many of the most important concepts in the field. The book also includes case studies on online advertising, wireless spectrum auctions, kidney exchange, and network management.

**Persuasive Games** Ian Bogost, 2010-08-13 An exploration of the way videogames mount arguments and make expressive statements about the world that analyzes their unique persuasive power in terms of their computational properties. Videogames are an expressive medium, and a persuasive medium; they represent how real and imagined systems work, and they invite players to interact with those systems and form judgments about them. In this innovative analysis, Ian Bogost examines the way videogames mount arguments and influence players. Drawing on the 2,500-year history of rhetoric, the study of persuasive expression, Bogost analyzes rhetoric's unique function in software in general and videogames in particular. The field of media studies already analyzes visual rhetoric, the art of using imagery and visual representation persuasively. Bogost argues that videogames, thanks to their basic representational mode of procedurality (rule-based representations and interactions), open a new domain for persuasion; they realize a new form of rhetoric. Bogost calls this new form procedural rhetoric, a type of rhetoric tied to the core affordances of computers: running processes and executing rule-based symbolic manipulation. He argues further that videogames have a unique persuasive power that goes beyond other forms of computational persuasion. Not only can videogames support existing social and cultural positions, but they can also disrupt and change these positions themselves, leading to potentially significant long-term social change. Bogost looks at three areas in which videogame persuasion has already taken form and shows considerable potential: politics, advertising, and learning.
