Rehearsing John F. Colson, 2015-07-09 Following on the heels of his *Conducting and Rehearsing the Instrumental Music Ensemble*, John F. Colson takes students to the next level in conducting practice with *Rehearsing: Critical Connections for the Instrumental Music Conductor*. Colson draws together the critical connections for those seeking to become fully capable and self-assured instrumental music conductors. As he argues, too often conductor training programs treat the problems and challenges of the rehearsal—perhaps the single most critical element in any effort to achieve competency as a conductor—as secondary. Colson supplies the missing link for conductors looking for advice that allows them to complete their training for reaching complete competency as a conductor. He demonstrates throughout the specific connections that the advanced conductor must know and regularly employ—connections that few, if any, other works on the art of conducting

address or bring together. One connection, for example, illustrates the joining of music imagery, inner singing, and conducting technique to score study. Throughout, these connections describe the nitty-gritty of what it really takes to stand up in front of an instrumental music ensemble and successfully rehearse in order to achieve its highest performance level. Also, Colson argues and demonstrates the pitfalls of the commonly mistaken assumption among instrumental music conductors that score study alone is sufficient to prepare them for the rehearsal process. This grave error is regularly belied by the fact that a number of other steps precede the actual rehearsal process, from the use of instrumental pedagogy during the rehearsal process to teaching through performance concepts. Colson's work addresses the entire rehearsing process thoroughly and authoritatively.

Advances in Multimedia Modeling Klaus Schoeffmann, Bernard Merialdo, Alexander G. Hauptmann, Chong-Wah Ngo, Yiannis Andreopoulos, Christian Breiteneder, 2012-01-03 This book constitutes the refereed proceedings of the 18th International Multimedia Modeling Conference, MMM 2012, held in Klagenfurt, Austria, in January 2012. The 38 revised regular papers, 12 special session papers, 15 poster session papers, and 6 demo session papers were carefully reviewed and selected from 142 submissions. The papers are organized in the following topical sections: annotation, annotation and interactive multimedia applications, event and activity, mining and mobile multimedia applications, search, summarization and visualization, visualization and advanced multimedia systems, and the special sessions: interactive and immersive entertainment and communication, multimedia preservation: how to ensure multimedia access over time, multi-modal and cross-modal search, and video surveillance.

25 Concepts in Modern Architecture Stephanie Travis, Catherine Anderson, 2021-08-26

Designed to appeal to visual thinkers, 25 Concepts in Modern Architecture explores the fundamental ideas behind architectural design, through easy-to-follow sketches, drawings and succinct explanations. Twenty-five concepts – each of which are key to architectural design thinking – are accessibly explained by examining twenty-five different masterworks of modern architecture. For example, the concept of 'movement' in architectural design is explained through a close look at a Le Corbusier building; 'transparency' is examined in Philip Johnson's seminal Glass House; 'asymmetry' is understood through the work of Zaha Hadid – and so on, through twenty-five core concepts and twenty-five of the most significant buildings of the modern era. Taking a highly-visual approach, this simple yet visually-powerful guide is an essential companion in the design studio and to introductory courses in modern architecture, interior architecture, and interior design. Understanding these concepts will provide a key to demystifying the greatest works in modern architectural history, inspire new ways to think about new design projects, and reveal how drawing and sketching are used as tools for the visual analysis of architecture.

Technical News Bulletin, 1927

Fundamentals of Optimization Mark French, 2018-05-02 This textbook is for readers new or returning to the practice of optimization whose interest in the subject may relate to a wide range of products and processes. Rooted in the idea of “minimum principles,” the book introduces the reader to the analytical tools needed to apply optimization practices to an array of single- and multi-variable problems. While comprehensive and rigorous, the treatment requires no more than a basic understanding of technical math and how to display mathematical results visually. It presents a group of simple, robust methods and illustrates their use in clearly-defined examples. Distinct from the majority of optimization books on the market intended for a mathematically sophisticated audience who might want to develop their own new methods of optimization or do research in the field, this volume fills the void in instructional material for those who need to understand the basic ideas. The text emerged from a set of applications-driven lecture notes used in optimization courses the author has taught for over 25 years. The book is class-tested and refined based on student feedback, devoid of unnecessary abstraction, and ideal for students and practitioners from across the spectrum of engineering disciplines. It provides context through practical examples and sections describing commercial application of optimization ideas, such as how containerized freight and changing sea routes have been used to continually reduce the cost of moving freight across oceans. It also features 2D and 3D plots and an appendix illustrating the most widely used MATLAB optimization functions.
