Serving LGBTIQ Library and Archives Users Ellen

Greenblatt, 2014-01-10 Building upon the legacy of Gay and Lesbian Library Service (1990, “invaluable”—Library Journal; “recommended”—Booklist), this current anthology brings the discussion into a 21st century context by broadening the community base served and by examining the role of the Internet and Web 2.0 in libraries and archives. Many chapters include personal accounts of individuals’ experiences to illustrate the importance of library services to lesbian, gay, bisexual, transgender, intersex, and queer/questioning users. Specific topics include: library services provided to LGBTIQ youth; collection assessment and the process of gauging user satisfaction; the classification of LGBTIQ resources in the Dewey Decimal Classification system; attempts to restrict access to LGBTIQ resources through challenges, censorship, and Internet filtering; and workplace concerns of LGBTIQ library workers. Instructors considering this book for use in a course may request an examination copy [here](#).

Reference Services for Archives and Manuscripts

Laura B Cohen, 2012-11-12 Like their librarian colleagues, reference archivists mediate between the user and the source material. However, given the nature of archival materials and of their holding repositories, unique issues arise. While such matters as provenance and original order and access and security continue to be vital underpinnings of their work, a myriad of other issues comes into play as reference archivists attempt to balance the competing demands of donors, researchers, the public, and the press. From the creation and dissemination of finding aids for electronic resources to the implementation of marketing strategies to increase support and strengthen service, Reference Services for Archives and Manuscripts shows you

how to thrive in the changing world of archival reference. Intended to foster an appreciation of the issues both within and beyond the field of archives, *Reference Services for Archives and Manuscripts* reveals that today's archivist is straddling the world of the traditional with the world of the new. The book establishes its value as it guides you through new concerns such as how to: take advantage of technological developments in appraisal, accession, and preservation address copyright, privacy, and funding issues for electronic resources mount archival cataloging records on local and wide-area databases create a publicly available site on the Internet improve in-house access tools, professional abilities, and the caliber of public service address security issues and respond to theft *Reference Services for Archives and Manuscripts* also helps you by preparing you for changes in the relationship between archivist and researcher that will inevitably occur with further changes in technology. Other vital issues discussed are improved access for unserved and underserved groups, a revision in ethical codes, and the ability of archivists to become more customer-centered.

The Complete Guide to Personal Digital Archiving

Brianna H. Marshall, 2018-12-13 Scholars and scrapbookers alike need your help with saving their most important digital content. But how do you translate your professional knowledge as a librarian or archivist into practical skills that novices can apply to their own projects? *The Complete Guide to Personal Archiving* will show you the way, helping you break down archival concepts and best practices into teachable solutions for your patrons' projects. Whether it's a researcher needing to cull their most important email correspondence, or an empty-nester transferring home movies and photographs to more easily shared and mixed digital formats, this book will show you how to offer

assistance, providing explanations of common terms in plain language; quick, non-technical solutions to frequent patron requests; a look at the 3-2-1 approach to backing up files; guidance on how to archive Facebook posts and other social media; methods for capturing analog video from obsolete physical carriers like MiniDV; proven workflows for public facing transfer stations, as used at the Washington, D.C. Memory Lab and the Queens Library mobile scanning unit; talking points to help seniors make proactive decisions about their digital estates; perspectives on balancing core library values with the business goals of Google, Amazon, Facebook, and other dominant platforms; and additional resources for digging deep into personal digital archiving. Featuring expert contributors working in a variety of contexts, this resource will help you help your patrons take charge of their personal materials.

What are Archives? Louise Craven, 2008 In the UK, professional texts on archives concentrate on the how, not the why, of professional archival work. At the same time, studies of the theoretical role of the archive and the text are undertaken in other academic disciplines and there is an established forum for the discussion of related issues. This book invites the archivist to that arena of discussion and encourages archivists to step away from the practicalities of keeping archives, and to consider what it is they actually do in the cultural context of the early 21st century.

Encyclopedia of Archival Writers, 1515 - 2015

Luciana Duranti, Patricia C. Franks, 2019-04-26 This book breaks new grounds in the scholarship of archival science, providing information of nearly 200 authors. This is the first book that describes in one publication the intellectual contributions of all major archival authors in bibliographic context.

The Materiality of the Archive Sue Breakell, Wendy Russell, 2023-10-30 The Materiality of the Archive is the first volume to bring together a range of methodological approaches to the materiality of archives, as a framework for their engagement, analysis and interpretation. Focusing on the archives of creative practices, the book reaches between and across existing bodies of knowledge in this field, including material culture, art history and literary studies, unified by an interest in archives as material deposits and aggregations, in both analogue and digital forms, as well as the material encounter. Connecting a breadth of disciplinary interests in the archive with expanding discourses in materiality, contributors address the potential of a material engagement to animate archival content. Analysing the systems, processes and actions that constitute the shapes, forms and structures in which individual archival objects accumulate, and the underpinnings which may hold them in place as an archival body, the book considers ways in which the inexorable move to the digital affects traditional theories of the physical archival object. It also considers how stewardship practices such as description and metadata creation can accommodate these changes. The Materiality of the Archive unifies theory and practice and brings together professional and academic perspectives. The book is essential reading for academics, researchers and postgraduate students working in the fields of archive studies, museology, art history and material culture.

The International Business Archives Handbook

Alison Turton, 2017-09-19 The International Business Archives Handbook provides up-to-date information and

guidance on key issues relating to the understanding and management of the historical records of businesses. Key features include: • Chapter contributions from a range of experts in their respective fields. • Content covering business archive and business history initiatives around the world. • Practical advice combined with thought-provoking discussion on issues hitherto little addressed. • Useful quick-reference tables, global case study examples and further reading suggestions. The handbook is an invaluable guide for students, archive professionals and business historians alike. It is also an important reference tool for business professionals involved in information management more generally.

Libraries, Archives, and Museums Today Peter Botticelli, Martha R. Mahard, Michèle V. Cloonan, 2019-02-08
This book explores the intersections among libraries, archives, and museums (LAMs) in such practices as digital content creation, conservation and preservation, collections cataloging, digital asset management, digital curation and stewardship, expanding user experiences, and cultivating digital cultural communities.

Crowdsourcing our Cultural Heritage Mia Ridge, 2016-04-22
Crowdsourcing, or asking the general public to help contribute to shared goals, is increasingly popular in memory institutions as a tool for digitising or computing vast amounts of data. This book brings together for the first time the collected wisdom of international leaders in the theory and practice of crowdsourcing in cultural heritage. It features eight accessible case studies of groundbreaking projects from leading cultural heritage and academic institutions, and four thought-provoking essays that reflect on the wider implications of this engagement for participants and on the institutions themselves. Crowdsourcing in cultural heritage is more than a

framework for creating content: as a form of mutually beneficial engagement with the collections and research of museums, libraries, archives and academia, it benefits both audiences and institutions. However, successful crowdsourcing projects reflect a commitment to developing effective interface and technical designs. This book will help practitioners who wish to create their own crowdsourcing projects understand how other institutions devised the right combination of source material and the tasks for their 'crowd'. The authors provide theoretically informed, actionable insights on crowdsourcing in cultural heritage, outlining the context in which their projects were created, the challenges and opportunities that informed decisions during implementation, and reflecting on the results. This book will be essential reading for information and cultural management professionals, students and researchers in universities, corporate, public or academic libraries, museums and archives.

Developing and Maintaining Practical Archives Gregory

S. Hunter, 2020-04-14 Since its original publication Hunter's manual has been not only a rich and ready reference tool but also a practical resource for solving problems (Catholic Library World), and no text has served as a better overview of the field of archives. Newly revised and updated to more thoroughly address our increasingly digital world, including integration of digital records and audiovisual records into each chapter, it remains the clearest and most comprehensive guide to the discipline. Former editor of *American Archivist*, the journal of the Society of American Archivists (SAA), Hunter covers such keystone topics as a history of archives, including the roles of historical societies and local history collections in libraries; new sections on community archives, diversity, and inclusion; conducting a survey and starting an archival program; selection, appraisal, acquisition, accessioning, and deaccessioning; important points of copyright, privacy, and ethics; arrangement of archival collections, with a discussion of new theories; description, including DACS, EAD, and tools such as ArchivesSpace; access, reference, and outreach, with a look at how recent innovations in finding aids can help researchers; preservation, including guidance on how to handle rare books, maps, architectural records, and artifacts; digital records, addressing new and popular methods of storage and preservation of email, social media, image files, webpages, Word documents, spreadsheets, databases, and media files; disaster planning, security, and theft prevention; metrics, assessment, establishing employee procedures and policies, working with interns and volunteers, and other managerial duties; public relations and marketing, from social media and the Web to advocacy; and professional guidelines and codes, such as the newly developed SAA Statement of Core Values of Archivists. Providing in-depth coverage of both theory and practice,

this manual is essential for archivists at all levels of experience and of all backgrounds.

Oracle RMAN for Absolute Beginners Darl

Kuhn, 2014-11-05 Oracle RMAN for Absolute Beginners is a gentle introduction to the use of Oracle's Recovery Manager software to make backups of an Oracle database, and to restore all or part of a database in the event that data loss occurs. It is often said that a database administrator's #1 job responsibility is to be able to recover from data loss. If you're new to the Oracle platform, or you're new to database administration in general, you can hardly go wrong by making it your first priority to learn to backup and recover the database that has been entrusted into your hands. This book is short and sweet at just 200 pages. Focus lies on the mainstream use cases. Recovery Manager, or RMAN as it is called, is a powerful and complex tool that can be intimidating at first. Author Darl Kuhn understands the need to focus on the core use cases, building your confidence in the tool, and in your ability to recover from lost database files, and even to recover your entire database should that become necessary. Oracle RMAN for Absolute Beginners shows how to backup your database. That's the first job. You'll learn to backup the entire database, and to create incremental backups that in turn can speed restore and recovery operations. Then you'll learn to recover from lost data files, lost redo log files, lost control files, and even to restore the entire database from scratch. You'll even learn how to clone a database for development and test purposes by backing the database up on one system and restoring it onto another. Author Darl Kuhn has a decade and a half of experience in writing about, and teaching Oracle Database backup and recovery. If you are newly responsible for an Oracle Database, you can hardly do better than to pick up a copy of Oracle RMAN

for Absolute Beginners.

Archival Silences Michael Moss, David Thomas, 2021-05-10 Archival Silences demonstrates emphatically that archival absences exist all over the globe. The book questions whether benign 'silence' is an appropriate label for the variety of destructions, concealment and absences that can be identified within archival collections. Including contributions from archivists and scholars working around the world, this truly international collection examines archives in Australia, Brazil, Denmark, England, India, Iceland, Jamaica, Malawi, The Philippines, Scotland, Turkey and the United States. Making a clear link between autocratic regimes and the failure to record often horrendous crimes against humanity, the volume demonstrates that the failure of governments to create records, or to allow access to records, appears to be universal. Arguing that this helps to establish a hegemonic narrative that excludes the 'other', this book showcases the actions historians and archivists have taken to ensure that gaps in archives are filled. Yet the book also claims that silences in archives are inevitable and argues not only that recordkeeping should be mandated by international courts and bodies, but that we need to develop other ways of reading archives broadly conceived to compensate for absences. Archival Silences addresses fundamental issues of access to the written record around the world. It is directed at those with a concern for social justice, particularly scholars and students of archival studies, history, sociology, international relations, international law, business administration and information science.

Science in the Archives Lorraine Daston, 2017-04-04 Science in the Archives reveals affinities and continuities among the sciences of the archives, across many disciplines and centuries, in order to present a better picture of

essential archival practices and, thereby, the meaning of science. For in both the natural and human sciences, archives of the most diverse forms make cumulative, collective knowledge possible. Yet in contrast to laboratories, observatories, or the field, archives have yet to be studied across the board as central sites of science. The volume covers episodes in the history of astronomy, geology, genetics, classical philology, climatology, history, medicine, and ancient natural philosophy, as well as fundamental practices such as collecting, retrieval strategies, and data mining. The time frame spans doxology in Greco-Roman antiquity to NSA surveillance techniques and the quantified-self movement. Each chapter explores the practices, politics, economics, and open-ended potential of the sciences of the archives, making this the first book devoted to the role of archives in the natural and human sciences.

Currents of Archival Thinking Heather MacNeil, Terry Eastwood, 2017-01-09 With new technologies and additional goals driving their institutions, archives are changing drastically. This book shows how the foundations of archival practice can be brought forward to adapt to new environments—while adhering to the key principles of preservation and access. Archives of all types are experiencing a resurgence, evolving to meet new environments (digital and physical) and new priorities. To meet those changes, professional archivist education programs—now one of the more active segments of LIS schools—are proliferating as well. This book identifies core archival theories and approaches and how those interact with major issues and trends in the field. The essays explore the progression of archival thinking today, discussing the nature of archives in light of present-day roles for archivists and archival institutions in the preservation of documentary

heritage. Examining new conceptualizations and emerging frameworks through the lenses of core archival practice and theory, the book covers core foundational topics, such as the nature of archives, the ruling concept of provenance, and the principal functions of archivists, discussing each in the context of current and future environments and priorities. Several new essays on topics of central importance not treated in the first edition are included, such as digital preservation and the influence of new technologies on institutional programs that facilitate archival access, advocacy, and outreach; the changing legal context of archives and archival work; and the archival collections of private persons and organizations. Readers will also learn how communities of various kinds intersect with the archival mission and how other disciplines' perspectives on archives can open new avenues.

Historical Information Science Lawrence J.

McCrank, 2001 *Historical Information Science* is an extensive review and bibliographic essay, backed by almost 6,000 citations, detailing developments in information technology since the advent of personal computers and the convergence of several social science and humanities disciplines in historical computing. Its focus is on the access, preservation, and analysis of historical information (primarily in electronic form) and the relationships between new methodology and instructional media, techniques, and research trends in library special collections, digital libraries, data archives, and museums.

Migrating Heritage Dr Perla Innocenti, 2014-03-28
Bringing together an international forum of experts, this book looks at how museums, libraries and further public cultural institutions respond to the effects of globalisation,

mobility and migration across Europe. It puts forward examples of innovative practice and policies that reflect these challenges, looking at issues such as how cultural institutions present themselves to and interact with multicultural audiences, how to support networking across European institutions, and share practice in core activities such as archiving interpreting and exhibiting artefacts. Academics, practitioners from museums and public institutions and policymakers explore theoretical and practical approaches from a range of different disciplines such as museum and cultural heritage studies, cultural memory studies, social anthropology, sociology of organizations, cultural heritage management and cultural heritage informatics.
