**Smaller Satellites: Bigger Business?** Michael J Rycroft, Norma Crosby, 2014-03-14 Y. Fujimori, Symposium Programme Committee Chair, and Faculty Member, International Space University e-mail: fujimori@isu.isunet.edu M. Rycroft, Faculty Member, International Space University e-mail: rycroft@isu.isunet.edu N. Crosby, International Space University e-mail: norma@bock-crosby.fsbusiness.co.uk For the sixth annual ISU Symposium the theme was Smaller Satellites: Bigger Business? Concepts, Applications and Markets for Micro/Nanosatellites in a New Information World. Thus, the Symposium addressed the crucial question: are small satellites the saviour of space programmes around the world? It did this from the unique perspective of the International Space today? University - the interdisciplinary, international and intercultural perspective. This Symposium brought together a variety of people working on small satellites - engineers, scientists, planners, providers, operators, policy makers and business executives, together with representatives from regulatory bodies, from national and international organizations, and from the finance sector, and also entrepreneurs. Discussion and debate were encouraged, based on the papers presented and those published here.

**Building the Hyperconnected Society** Ovidiu Vermesan, Peter Friess, 2015-06-16 This book aims to provide a broad overview of various topics of Internet of Things (IoT), ranging from research, innovation and development priorities to enabling technologies, nanoelectronics, cyber-physical systems, architecture, interoperability and industrial applications. All this is happening in a global context, building towards intelligent, interconnected decision making as an essential driver for new growth and co-competition across a wider set of markets. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC – Internet of Things European Research Cluster from research to technological innovation, validation and deployment. The book

builds on the ideas put forward by the European Research Cluster on the Internet of Things Strategic Research and Innovation Agenda, and presents global views and state of the art results on the challenges facing the research, innovation, development and deployment of IoT in future years. The concept of IoT could disrupt consumer and industrial product markets generating new revenues and serving as a growth driver for semiconductor, networking equipment, and service provider end-markets globally. This will create new application and product end-markets, change the value chain of companies that creates the IoT technology and deploy it in various end sectors, while impacting the business models of semiconductor, software, device, communication and service provider stakeholders. The proliferation of intelligent devices at the edge of the network with the introduction of embedded software and app-driven hardware into manufactured devices, and the ability, through embedded software/hardware developments, to monetize those device functions and features by offering novel solutions, could generate completely new types of revenue streams. Intelligent and IoT devices leverage software, software licensing, entitlement management, and Internet connectivity in ways that address many of the societal challenges that we will face in the next decade.

**Computational Science and Technology** Rayner Alfred, Hiroyuki Iida, Havaluddin Havaluddin, Patricia Anthony, 2021-04-16 This book gathers the proceedings of the Seventh International Conference on Computational Science and Technology 2020 (ICCST 2020), held in Pattaya, Thailand, on 29–30 August 2020. The respective contributions offer practitioners and researchers a range of new computational techniques and solutions, identify emerging issues, and outline future research directions, while also showing them how to apply the latest large-scale, high-performance computational methods.

The Web Library Nicholas G. Tomaiuolo, 2004 Describes how to create a digital library of documents.

**Malware Analysis Using Artificial Intelligence and Deep Learning** Mark Stamp, Mamoun Alazab, Andrii Shalaginov, 2020-12-20 □ This book is focused on the use of deep learning (DL) and artificial intelligence (AI) as tools to advance the fields of malware detection and analysis. The individual chapters of the book deal with a wide variety of state-of-the-art AI and DL techniques, which are applied to a number of challenging malware-related problems. DL and AI based approaches to malware detection and analysis are largely data driven and hence minimal expert domain knowledge of malware is needed. This book fills a gap between the emerging fields of DL/AI and malware analysis. It covers a broad range of modern and practical DL and AI techniques, including frameworks and development tools enabling the audience to innovate with cutting-edge research advancements in a multitude of malware (and closely related) use cases.

*Cyber-Physical Threat Intelligence for Critical Infrastructures Security* John Soldatos, James Philpot, Gabriele Giunta, 2020-06-30 Modern critical infrastructures comprise of many interconnected cyber and physical assets, and as such are large scale cyber-physical systems. Hence, the conventional approach of securing these infrastructures by addressing cyber security and physical security separately is no longer effective. Rather more integrated approaches that address the security of cyber and physical assets at the same time are required. This book presents integrated (i.e. cyber and physical) security approaches and technologies for the critical

infrastructures that underpin our societies. Specifically, it introduces advanced techniques for threat detection, risk assessment and security information sharing, based on leading edge technologies like machine learning, security knowledge modelling, IoT security and distributed ledger infrastructures. Likewise, it presets how established security technologies like Security Information and Event Management (SIEM), pen-testing, vulnerability assessment and security data analytics can be used in the context of integrated Critical Infrastructure Protection. The novel methods and techniques of the book are exemplified in case studies involving critical infrastructures in four industrial sectors, namely finance, healthcare, energy and communications. The peculiarities of critical infrastructure protection in each one of these sectors is discussed and addressed based on sector-specific solutions. The advent of the fourth industrial revolution (Industry 4.0) is expected to increase the cyber-physical nature of critical infrastructures as well as their interconnection in the scope of sectorial and cross-sector value chains. Therefore, the demand for solutions that foster the interplay between cyber and physical security, and enable Cyber-Physical Threat Intelligence is likely to explode. In this book, we have shed light on the structure of such integrated security systems, as well as on the technologies that will underpin their operation. We hope that Security and Critical Infrastructure Protection stakeholders will find the book useful when planning their future security strategies.

High-Performance Modelling and Simulation for Big Data Applications Joanna Kołodziej, Horacio González-Vélez, 2019-03-25 This open access book was prepared as a Final Publication of the COST Action IC1406 “High-Performance Modelling and Simulation for Big Data Applications (cHiPSet)” project. Long considered important pillars of the scientific method, Modelling and Simulation have evolved from traditional discrete numerical methods to complex data-intensive continuous analytical optimisations. Resolution, scale, and accuracy have become essential to predict and analyse natural and complex systems in science and engineering. When their level of abstraction raises to have a better discernment of the domain at hand, their representation gets increasingly demanding for computational and data resources. On the other hand, High Performance Computing typically entails the effective use of parallel and distributed processing units coupled with efficient storage, communication and visualisation systems to underpin complex data-intensive applications in distinct scientific and technical domains. It is then arguably required to have a seamless interaction of High Performance Computing with Modelling and Simulation in order to store, compute, analyse, and visualise large data sets in science and engineering. Funded by the European Commission, cHiPSet has provided a dynamic trans-European forum for their members and distinguished guests to openly discuss novel perspectives and topics of interests for these two communities. This cHiPSet compendium presents a set of selected case studies related to healthcare, biological data, computational advertising, multimedia, finance, bioinformatics, and telecommunications.

**Broadband Communications, Networks, and Systems** Victor Sucasas, Georgios Mantas, Saud Althunibat, 2018-12-29 This book constitutes the refereed post-conference proceedings of the 9th International Conference on Broadband Communications, Networks, and Systems, Broadnets 2018, which took place in Faro, Portugal, in September 2018. The

30 revised full and 16 workshop papers were carefully reviewed and selected from 68 submissions. The papers are thematically grouped as follows: Advanced Techniques for IoT and WSNs; SDN and Network Virtualization; eHealth and Telemedicine Mobile Applications; Security and Privacy Preservation; Communication Reliability and Protocols; Spatial Modulation Techniques; Hardware Implementation and Antenna Design.

*Order and Structure in Syntax I* Laura R Bailey,Michelle Sheehan,2020-10-09 This book reconsiders the role of order and structure in syntax, focusing on fundamental issues such as word order and grammatical functions. The first group of papers in the collection asks what word order can tell us about syntactic structure, using evidence from V2, object shift, word order gaps and different kinds of movement. The second group of papers all address the issue of subjecthood in some way, and examine how certain subject properties vary across languages: expression of subjects, expletive subjects, quirky and locative subjects. All of the papers address in some way the tension between modelling what can vary across languages whilst improving our understanding of what might be universal to human language. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. *Traditions of the Magi* Albert F. de Jong,2015-08-27 This is the first full treatment of the Greek and Latin references to Zoroastrianism since the pioneering works of Benveniste, Bidez & Cumont, and Clemen. It focuses on the possibilities offered by the classical reports on Zoroastrianism to reconstruct the history of that faith. The book is divided into three sections. The first section deals with introductory problems concerning ancient religious ethnography and current views of the history of Zoroastrianism. The second section consists of commentaries on five selected passages. The third section offers a thematical overview of the materials and their

relevance for the history of Iranian religions. Apart from offering introductions to a wide range of debates and topics in Classics and Iranian studies, the book aims to illustrate the diversity of beliefs and practices in ancient Zoroastrianism.

**Techniques in Large Animal Surgery** Dean A. Hendrickson, 2013-05-13 The Third Edition of this classic surgery text is the ideal resource for veterinary students and equine and mixed large animal practitioners. The book can be used both as an introduction to the fundamental techniques of large animal surgery and as an easy-to-use guide for quick reference in the field. The step-by-step technique sections have been restructured to allow faster access to information, including objectives and lists of equipment needed for each procedure. In addition to general updates throughout, this edition features new sections on minimally invasive surgery, laser surgery, and laparotomy. Coverage includes surgical techniques for horses, cows, pigs, goats, and select exotic species. Most techniques presented can be performed without the advantages of a fully equipped large animal hospital or teaching institution.

**Freedom's Main Line** Derek Charles Catsam, 2009-01-23 "A compelling, spellbinding examination of a pivotal event in civil rights history . . . a highly readable and dramatic account of a major turning point." –Journal of African-American History Black Americans in the Jim Crow South could not escape the grim reality of racial segregation, whether enforced by law or by custom. In Freedom's Main Line: The Journey of Reconciliation and the Freedom Rides, author Derek Charles Catsam shows that courtrooms, classrooms, and cemeteries were not the only front lines in African Americans' prolonged struggle for basic civil rights. Buses, trains, and other modes of public transportation provided the perfect means for civil rights activists to protest the second-class citizenship of African Americans, bringing the reality of the violence of segregation into the consciousness of America and the world. Freedom's Main Line argues that the Freedom Rides, a turning point in the Civil Rights Movement, were a logical, natural evolution of such earlier efforts as the Journey of Reconciliation, relying on the principles of nonviolence so common in the larger movement. The impact of the Freedom Rides, however, was unprecedented, fixing the issue of civil rights in the national consciousness. Later activists were often dubbed Freedom Riders even if they never set foot on a bus. With challenges to segregated transportation as his point of departure, Catsam chronicles black Americans' long journey toward increased civil rights. Freedom's Main Line tells the story of bold incursions into the heart of institutional discrimination, journeys undertaken by heroic individuals who forced racial injustice into the national and international spotlight and helped pave the way for the landmark Civil Rights Act of 1964.

**The Dieselgate** Marco Frigessi di Rattalma, 2017-01-20 This book explains, compares and assesses the legal implications of Dieselgate within a range of selected jurisdictions and at the EU, international and comparative law level. The book analyses the US EPA-VW \$14.7 billion dollar settlement of 2016, one of the largest civil settlements in the history of environmental law. As it shows, the Dieselgate affair has raised a host of issues concerning corporate and social responsibility, tort liability, environmental liability, contractual defective

products, warranty, and false environmental claims in a range of jurisdictions. Issues like repurchasing or retrofitting cars from consumers and making direct payments to consumers through car buy-backs and compensation are analysed. Further, the book relates how Dieselgate has also contributed to the discussion about the introduction of more effective collective measures of redress for consumers, such as class actions, in Germany, France, Italy and the UK. The book subsequently reviews the criminal offences Volkswagen is currently confronted with in Germany, France and Italy, i.e. fraud and manipulation of capital markets (by belatedly providing shareholders with essential information relevant for the share value), and, potentially, environmental crimes. It demonstrates how Dieselgate has sparked new debates in Germany, Italy, France and the UK about the need to introduce enterprise liability for organised crimes, lack of compliance and control structures, and intentional violations of the law. Lastly, the book discusses how EU law has sought to respond to Dieselgate and thus investigates the controversial EU Regulation No. 2016/646 introducing a temporary conformity factor of 2.1 (equivalent to a 110% increase on the current limit) to be applied for NOx in the new RDE testing cycle, and the works of the EU committee of inquiry into Emissions Measurements in the Automotive Sector (EMIS).

**Fundamentals of College Geometry** Edwin M. Hemmerling, 1969-01-15 Encompasses modern reforms in content and concepts in presenting the basic structure of geometry along with deductive and inductive reasoning.

Detection of Intrusions and Malware, and Vulnerability Assessment Clémentine Maurice, Leyla Bilge, Gianluca Stringhini, Nuno Neves, 2020-09-07 This book constitutes the proceedings of the 17th International Conference on Detection of Intrusions and Malware, and Vulnerability Assessment, DIMVA 2020, held in Lisbon, Portugal, in June 2020.\* The 13 full papers presented in this volume were carefully reviewed and selected from 45 submissions. The contributions were organized in topical sections named: vulnerability discovery and analysis; attacks; web security; and detection and containment. □\*The conference was held virtually due to the COVID-19 pandemic.

**Game of Spies** Paddy Ashdown, 2017-05-22 A riveting three-way spy story set in occupied France. 'Game of Spies' tells the story of a lethal spy triangle between 1942 and 1944 in Bordeaux - and of France's greatest betrayal by aristocratic and right-wing Resistance leader Andre Grandclement. The story centres on three men: one British, one French and one German and the duel they fought out in an atmosphere of collaboration, betrayal and assassination, in which comrades sold fellow comrades, Allied agents and downed pilots to the Germans, as casually as they would a bottle of wine. It is a story of SOE, treachery, bed-hopping and executions in the city labelled 'la plus collaboratrice' in the whole of France.

Diesel and Gasoline Engine Exhausts and Some Nitroarenes IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, The International Agency for Research on Cancer, 2015-06-04 This volume of the IARC Monographs provides evaluations of the carcinogenicity of diesel and gasoline engine exhausts, and of 10 nitroarenes found in diesel engine exhaust: 3,7-dinitrofluoranthene, 3,9-dinitrofluoranthene, 1,3-dinitropyrene, 1,6-dinitropyrene, 1,8-dinitropyrene, 6-nitrochrysene, 2-nitrofluorene, 1-nitropyrene, 4-nitropyrene, and 3-nitrobenzanthrone. Diesel engines are used for transport on and off roads (e.g. passenger cars, buses, trucks, trains, ships), for machinery

in various industrial sectors (e.g. mining, construction), and for electricity generators, particularly in developing countries. Gasoline engines are used in cars and hand-held equipment (e.g. chainsaws). The emissions from such combustion engines comprise a complex and varying mixture of gases (e.g. carbon monoxide, nitrogen oxides), particles (e.g. PM10, PM2.5, ultrafine particles, elemental carbon, organic carbon, ash, sulfate, and metals), volatile organic compounds (e.g. benzene, formaldehyde) and semi-volatile organic compounds (e.g. polycyclic aromatic hydrocarbons) including oxygenated and nitrated derivatives of polycyclic aromatic hydrocarbons. Diesel and gasoline engines thus make a significant contribution to a broad range of air pollutants to which people are exposed in the general population as well as in different occupational settings. An IARC Monographs Working Group reviewed epidemiological evidence, animal bioassays, and mechanistic and other relevant data to reach conclusions as to the carcinogenic hazard to humans of environmental or occupational exposure to diesel and gasoline engine exhausts (including those associated with the mining, railroad, construction, and transportation industries) and to 10 selected nitroarenes. -- Back cover.
